The Shape of Things to Come?

BBSing in the Republic of SOUTH AFRICA

1994 Boardwatch 100 **Readers Choice BBS Contest**

What Can You Do with the Open

Just about anything you want. That's because The Major BBS is a completely open-ended platform for creating your own unique online service.

You can choose from a huge selection of off-the-shelf software — just a small fraction

of which is represented here — offered by over 100 third-party developers.

Most of these add-ons integrate into your BBS as DLLs (Dynamic Link Libraries). No shelling to DOS is required. And because these DLLs are written in C and Assembly,

they provide far greater performance and flexibility than script languages or dBase derivatives.

You can run all this from a single computer and support up to 256 simultaneous users via modems, serial connections, direct

Architecture of The Major BBS°?

X.25 circuits, and Novell LAN channels. No other BBS platform gives you this power.

Need "doors" capability too? You can hook up additional machines and instantly use the programs written for multi-node BBSes as well. To quote Newsbytes, "The Major BBS is one of the most powerful and expandable boards available, yet it is extremely easy to install and run."

For more information, see your local dealer, or give us a call at 1-800-328-1128

(outside U.S. and Canada call 305-583-5990). And team up with BBS developers that link you into everything else.

Only One Multi-User BBS

You started out to build a multi-user BBS. You had dreams about the service your system would provide, the problems you would solve and the money you would make. But you didn't bargain for the pile of hardware you would live with every day and now it controls your life.

As you compared the prices of software you missed the fact that the design philosophy of most BBS software forces many hardware decisions on you. ONLY TBBS allows you to achieve high performance with 64 high speed lines on a single CPU with NO custom hardware. And only TBBS gives you the option of integrated xBASE databasing with the TDBS expansion module and compiler.

True freedom is the ability to spend vour time as you wish. Talk to real multi-user BBS sysops. You'll notice that only TBBS operators talk first about ideas, not hardware and software. For over ten years TBBS has provided them the freedom to design custom systems they can live with.

No one gets more capability with less impact on their life than a TBBS sysop. You can buy 64user TBBS 2.2 for \$1,995 (32-user \$1,495,

16-user \$895,

2-user \$295)

and use the money

you saved on hard-

ware to celebrate

your success.

EDITOR'S NOTES

Mister, Can You Spare a Chicken?

T've been puzzling over something for several weeks, without a lot of progress towards a solution. I'm not even too certain I can describe the problem cogently, and that's probably part of the difficulty in devising a solution. And it occurs to me that I may not even be the one that should be pondering this. But I think we have a money problem.

At home, my wife handles whatever money matters might arise, and here at Boardwatch, Rob King rather expertly tracks the comings and goings of dollars and cents. Each of them know better than to allow me to carry more than about \$5 in my pocket, and generally, they have to pin a note to my lapel telling me which pocket it's in lest I be found starved to death laying in a pizzeria someplace just a few yards from food.

That said, we do appear to have a money problem. I understand that money problems are generally not unusual, but this one may be a little bit of a secret, or at least not generally well known.

We don't have any.

I suppose that at some time in the distant past, the world worked on a barter system. I'd trade you a couple of chickens for a pizza. You'd eat one of the chickens, and couple the other with a pig to buy a wheelbarrow. It was all a little awkward, but that's probably how "trade" got started.

At some point along the way, we all agreed that something more portable, transferrable, and universal could be used to represent chickens, pizzas, and pigs. Rare metals such as gold and silver, in relatively short supply, small, transportable, and valued in and of themselves could be used as money to grease the exchange of farm animals and Italian baked goods.

The precious metals eventually were "minted" to uniform size and purity, and lots of dead guys were found depicted on them so we could all recognize "real" gold from, let us say, simulated gold or silver. Within my lifetime, cash was what money was and had been for many centuries.

But cash works best in an exchange between two parties in close enough proximity to pass it from one hand to the next. Most anything bought until the last 30 years was bought in person. You walked, drove, or trotted to the place where the goods were, and handed the guy some dollar bills. In exchange, he graciously allowed you to leave with some of his stuff in an unventilated-by-bullets fashion.

We've rather moved away from that. Today, goods are bought and sold and traded on a national and international basis, not just by governments and enormous economic entities, but by anyone that can master the technological intricacies of dialing a touchtone phone. Advertising goes out in magazines and television commercials broadcast to literally hundreds of millions of people. Toll-free 800 lines sweep in the sales from around a continent. Mail order firms by the thousands offer millions of different products delivered right to your door from a warehouse a partial planet distant. Fax machines squeal day and night. Commerce is at least continental, and in many cases global, for the individual Tom, Dick, and proverbial Harry.

The problem of course is that you can't really do this by cash because you may not even be on the same coast. We have developed some items like checks and increasingly credit cards, that represent the cash that represents the wealth in most indirect ways. But a credit card number isn't really finite, and it isn't really, well, **REAL**.

As a result, it can be very easy to simulate something that already exists as a simulation. Today, some of these money "patches" appear to work more or less. But they don't really work. One of the reasons is that the system is too easy to defraud.

It isn't talked about much outside of banking circles. And the average consumer is convinced that the difference between the current prime rate and the interest rate charged on credit cards is all greedy bankers grabbing the difference. Similarly, the difference between what banks make loans for now, and what they pay at treasury auctions and to their depositors, compared to the current level of inflation, looks like a crime in motion. Yet while banks are modestly better off than they were a year or two ago financially, they just aren't all that profitable.

And the numbers just don't all add up. Where is all the money going?

Within financial circles, where it is going is no secret at all. They just don't know quite how to break the news to anyone. It's fraud and it has reached such epidemic proportions that our entire economy is paying an ENOR-MOUS tax on every transaction, basically because our simulated currency is too easy to simulate.

The electronic transfer methods, the ATM's, the Master Card and Visa, the American Express, are being taken to the ground wholesale on a daily basis. The banks, check guarantee firms, and credit card networks are surviving by playing a kind of statistical Russian roulette. And every time the hammer falls on a live chamber it blows part of YOUR brains out, not theirs - as long as they can stay a step ahead of the game. And that's what the interest rate pad is doing there now, paying the losses. All very quietly, but in HUGE amounts.

The heart of it is that greasy paper dollar bills don't cut it as money in a long distance economy. And we haven't come up with anything nearly as good to replace it. So right now, we just forfeit about 10% of every transaction to make it appear to work a little while longer.

The flow of commerce into electronic media really is picking up steam. And one of its hallmarks is that we can now deal more on a many-to-many basis to a greater degree than previously. What this means is that for money to really work in an electronic society, everyone must be able to ACCEPT the electronic money as easily as they can spend it. And right now only a few of the most trustworthy businesses can get merchant accounts to accept MC/VISA, as one example, at all. And entire business "classes" are being redlined regularly and their merchant accounts cancelled to try to stem the tide of fraud. The system is failing and one bandaid after another is being slapped on in hushed tones hoping to put off the final day of accounting.

Technology is rapidly moving to accelerate the problem. As electronic media become more facile, the broadening of commerce online exacerbates the situation. It is my observation that many many things that people want to do online simply can't be done because there is no way to transfer value that

isn't terribly complicated, eaten up with administrative costs, or doesn't work and is too much trouble for anyone to bother with. We're back to the awkwardness of trading chickens for pizza, and the online economy is in danger of stagnation if we can't invent some money. What we need to move forward is a form of CyberCash that works. And if we can solve this problem, we can not only move forward in the online world, but we get a 10% payraise in the world of the street as well. And I'm a little frustrated that I just don't seem to be smart enough to puzzle out how to do it.

I can note some characteristics CyberCash would have to have:

- 1. It must be incremental. You should be able to give someone a quarter without it costing \$1.25 in administrative costs to do so. There's a reason for pocket change, and we need it electronically as well. The many plans for electronic "vending machines" will never get off the ground without the electronic equivalent of quarters.
- 2. It must be finite. If you have a dollar, nobody else can have the same one at the same time. If you give it to somebody else, it isn't yours any more, no matter how badly you wish it was, or how shoddy the merchandise turns out to be, or how much you have changed your mind.
- 3. It should be anonymous. You should be able to give it to someone without having to give them a urinalysis report, your life's history, and 17 ways to track you down later. Cash, though serialized, was pretty good at preserving a person's privacy. Our government has very overtly sought to eliminate this little item, and it is time we put a stop to THAT as well. You shouldn't have to personally vouche for the value of the money, it is already valuable without you, or must be to be money.
- 4. It must be portable. It should be a relatively simple and painless process to hand someone a buck, not a career change. If you have to type in 45 digits, a pin code, an expiration date, and your mother's maiden name, I'm already lost and effectively penniless.
- 5. It must be unrestricted in use. It has to be translatable across the entire economy. Money that is only good for a particular thing isn't money at allits scrip. You should be able to use it for everything from accessing the

library of congress to purchasing cigarettes - yes, you should even be able to sin with real money.

- 6. It should be non-directional. That is not to say everyone automatically has it, but it should flow in all directions with equal fluidity. You should be able to accept money with approximately the same transactional dispatch as you can give it to someone else. Acceptance of money should not be the province of the trustworthy. Everyone is an equal in the giving and taking of money.
- 7. It must be immune to fraud. If anyone can easily debase the currency, you don't have a currency, and we're back to the original problem. It's ok to have people defrauding people. But you just can't have people defrauding the money system and still have a money system.
- 8. It should be believable. A money system is basically a belief system. If everyone doesn't agree that it is money, it isn't.

9. It should be simple. If you can't write down the conceptual solution on the face of a dollar bill, you probably don't have one.

Our communications and distribution systems for moving goods in this country have become awesome in their reach, power, and efficiency. I just placed 66,000 newsstand copies of this magazine in nearly 8000 stores on four continents in less than two weeks and never left the room. I could not personally physically move more than a few hundred copies myself across the

hall to the men's room in a day. The potential of a future economy that takes advantage of these distribution systems coupled with the communications ability that now allows people to retrieve product information, reach a buying decision, and order the goods globally is virtually UNLIMITED. The global financial results of the much discussed NAFTA agreement currently under hot debate would be entirely lost in the rounding errors. But until we develop a medium of exchange more elegant than swapping chickens for pizza, we can't take another step forward. Worse, our system is actually coming apart at the seams even from where we stand now.

And after spending an inordinate amount of time the past few weeks puzzling over this matter, I can admit in print that I'm entire clueless as to how to fix it. Since our readership just happens to be made up almost entirely of gentlemen and ladies, scholars all, extraordinary in their cleverness of intellect and widely noted for their resourcefulness, I would ask for the good of all that you each devote an hour or so of considered thought to pondering the vagaries of this conundrum and forward all plausible solutions to the body politic for consideration.

On another topic, we welcome a new columnist this issue. John C. Dvorak probably needs no introduction, but it's taken us a long time to get into a position where we could give him one, and so I'm disinclined to pass on the opportunity. I've been reading Dvorak's columns since the year of our Lord, 1981, when he resided mainly on the back page of the early InfoWorld. He actually began championing the online schtick as early as 1984, and almost single handedly made it possible to get a book on modems and data communications published in this country - a genre that may be getting actually a bit crowded at this stage. He plugged Boardwatch in a PC Magazine column in 1989 that gave us a much needed boost in those days - possibly a good part of the reason we're still here. And he's done a lot for the online community all along the way. We are really most pleased to welcome him as a regular columnist in these pages.

Jack Rickard Editor Rotundus Boardwatch Magazine

LETTERS TO THE EDITOR

Dear Jack:

I whole heartedly enjoy your magazine. The only problem is, I sit down as soon as I get it in the mail and read it from cover to cover. Then I have to wait til the next month. In between issues, I go back through my back issues and reread different parts I marked for reference.

I started La Grange Satellite Systems in 1979 while I was Mayor of La Grange and looking for a cable company for the City. It wasn't a planned venture. I just kinda got into it. When home satellite sales fell off due to scrambling in 1987, I sorta got into another business, Mark Twain Computer Mfg., Inc., and started building home computers. I got into this business because a whole lot of satellite dealers needed computers to burn eproms for these descramblers.

I started the ILIAMO BBS earlier this year to provide computer communication for home satellite dealers and their customers and also for a Non-profit organization called V.O.C.A.L. which stands for Victims of Child Abuse Laws. In the State of Missouri alone, there are over 175 calls to the Toll Free 800 child abuse hotline that are false accusations. One out of 32 families in the State of Missouri were falsely accused of child abuse last year.

My problem is as well the same problem as other BBS sysops which is how much to charge to keep the BBS up and running. If you don't charge enough, you are donating time, and if you charge too much, they call somewhere else.

A few months ago, I received information on how to cut my own high phone bills from a company called BUSINESS NETWORK COMMUNICATIONS. Whereas, I have 8 phone lines installed here. Three are listed to Mark Twain Computer Mfg. Inc. and three are listed to La Grange Satellite Systems, and two for my personal lines.

Last year when the push was on by MCI, AT&T, and SPRINT to sign up, I wanted to see which was actually cheaper. I signed Mark Twain to MCI, La Grange Satellite to SPRINT, and my personal lines to AT&T. I quickly found out that AT&T was the highest, but MCI and SPRINT have their little ways to pad the bill too.

So when I received info from BNC, I signed up my residential lines to them

first, just to see if they were 10% to 30% lower. My first bill showed me quickly that BNC was more than the 30% lower than BNC promised, and call for call, time for time, BNC was cheaper than MCI and SPRINT. So I signed up the other two services to BNC.

Now, not only do I get lower costs for my calls, I get FOUR FREE HOURS of long distance calls EVERY year for each service. Four for Mark Twain, Four for La Grange Satellite, and four for my residential. That's twelve hours a year of FREE long distant phone calls.

Later I received an offer to be able to offer BNC to others and make a commission off the new customers phone calls. I would get 5% of anyone who signed up because of me if I signed up for \$30.00. OR, I would get 9% if I signed up for \$495. What to do. So I did some calculations with my BBS callers and I did some researching with my callers.

I was charging \$30.00 per year and at 226 callers that came to over \$6500 per year. In my research, I found that the average BBS user has over \$75 per month phone bills. So the calculations came up like this. \$75 times 226 equals \$16950 per month. If they all signed up, my commission at 5% would be \$847.50 per month. But if I signed up at the \$495 level, my commission would be 9% instead of 5%, and add up to \$1525.00 per month. Either way, it all added up to more than the \$6500.00 per year I was charging. I signed up for the \$495 offer to get 9% instead of 5%.

So, I made an offer to my callers. If they signed up their long distant service to BNC, there would be no more fees to the BBS, Plus they would get lower long distant phone bills, PLUS, they would get FOUR HOURS OF LONG DISTANT CALLS "FREE". And, if they stayed on the BNC service they would get 5% of their TOTAL long distant phone bill credited on the 13th month, 10% of their second year the 25th month, and 15% of their third year the 37th month, and still get the FOUR FREE HOURS every year.

Guess what happened. 186 signed up to the program. My commissions on thos 186 averages around \$1,200.00 per month. Then an unexpected thing happened. They were contacted directly by BNC on my behalf and 27 of these callers had businesses which

they signed up too. These businesses have an average phone bill of around \$300 to \$400. Whereas this just happened, I have to guess that this will increase the income around \$700 to \$900 per month. I now have more money to expand my BBS to attract more callers and now be able to hire a helper to keep it going.

I still haven't convinced the others to change over yet, but I will eventually. But, you know what the greatest thing about this is? This money will continue as long as these people make long distant calls, even if I quit running this BBS. Plus, everytime they tell someone else about BNC and these people sign up, I get a percentage. I am very sure this will get bigger each month.

What I am saying is this. First off, I have never gotten into a business by planning it. I have always got into any of my businesses by backing into them, and by seeing an opportunity to make a dollar. BUT, this will very soon make my reitrement.

I just thought that this would be a great article for you to write about. I am sure there are many other BBS operators, looking for a way to get and keep callers. What better way than to offer their callers wholesale long distant calling plus FOUR HOURS of FREE calls and rebates each year. A lot of my callers have left messages commenting on how their phone bills are lower.

Again, I want to thank you for the greatest BBS pubilication.

Sincerely,

Jerry Brandt. ILIAMO Information Service (314)655-2263 900 North 5th Street La Grange, MO 63448

Jerry:

Your letter leaves me breathless, and for good or ill, I just had to share it with our readers. Amerika...what a country! I rather gather that from what you describe, we only have about 90 days before BNC provides all telephone service on the planet.

Actually, and quite seriously, I have been looking for one of the long distance carriers to get with the program at some point. There are 14 million BBS callers. A third of them claim their favorite BBS is in a different area code from their own. They think they make an average of 62 calls per month and calls average about 40 minutes. How long before some LD carrier figures this out and comes out with the "BBS Program."

The revenues LD carriers get NOW from BBSing are enormous, and sooner or later, one of them will have to figure this out. It just can't be otherwise in a competitive environment. But I've been thinking this for several years now. I thought at one point MCI would do something, but haven't heard anything recently. I just don't think it appropriate to give them a free lesson in this. They have to figure it out themselves or they don't deserve the pile of gold. Maybe they have to "back into it" as well.

Keep after it Jerry. With that calculator of yours and that attitude, you've got to win sooner or later.

Jack Rickard

Dear Mr. Rickard,

Well I've just mailed in my subscription to what I feel is the best on-line magazine in print (or not) available today. I have probably read every available product and Boardwatch is definately the only one I read cover to cover, TWICE!

I'm the sysop of an "information service" (to coin the new BBS-Speak) in the Camarillo, California area called Beyond the REALM info Services, 805-987-5506 (plug, plug plug...). We are a LARGE, two-line system, if that isn't too much of a contradiction, (450+users) running on VBBS/2 version 6.12! This is basically why I'm writing.

The ONLY bone I can pick with Boardwatch is that it hasn't completely covered what appears to be a VERY new, lucritive market for BBS sysops; that of the OS/2 multi-line BBS. Though, there are not many currently available, of the ones that are available, VBBS/2 seems to be the best! It's almost a direct port of the DOS version, which for a DOS BBS package is VERY easy to use, set-up, configure, administer, etc.

In my somewhat uneducated opinion, this software package deserves a review or write-up. If nothing less than to educate the readers on ALL packages for the OS/2 environment. For all intents and purposes, I believe OS/2 to be the best platform on which to run a multi-node system anyway. Its superior fault tolerance, multi-

threaded, multi-tasking environment provides better and more reliable performance than ANY DOS counterpart.

Because VBBS is a shareware package, it is able to provide FidoNet, UUCP, VNet, WWIV and many other network systems without licensing hassles. The utilities available for it work with EITHER the OS/2 OR DOS versions and are plentiful. Anything from User editors, to on-line doors, to script development packages are readily available and usually FREE!

The author, Roland DeGraaf is responsive and an excellent programmer. Bugs and suggestions are implemented rather quickly and documentation is well written and available in hypertext formats. CD-rom is fully supported and multi-lines are available with built-in DigiBoard compatibility. The OS/2 version uses less than 4% CPU resource at high speed (w/o a DigiBoard) and multi-line performance is excellent. Please give my system a call if you wish to review it further.

Thank you for your time and I look forward to hearing from you soon.

Sincerely,

Lee Ladisky, Sysop Beyond the REALM (805-987-5506).

Lee:

So that begs the question entirely. Really, which BBS software do you like the BEST?

Actually it does sound like a winner. So many bulletin boards...so little time. We'll try to have a look in a future issue.

Jack Rickard

Hi Jack!

Just thought I'd drop you a note to address a few ideas that have been accumulating from the last several issues.

First, let me thank you for not editing the letters you receive from your subscribers. From a journalists' point of view, I was always miffed by my editor taking an inane "work of art" written by someone, correcting the spelling and punctuation, and making it seem almost plausible.

From someone who has written articles before, I have also been beside myself when a good-meaning editor has twisted my original meaning into something different.

Second, I would like to comment on your idea of what shareware authors are. I am presently employed by a multi-million dollar grocery wholesale business that started as a road-side stand selling only and lettuce bananas. In my opinion, that is exactly what shareware authors are trying to do. They do not have enough capital (I call it money), to start a full-time, full-blown product. And so, they set up they're lemonade stands on the street to see if they can make some money in this thing we call Free Enterprise.

Thirdly, I think that you've started something that you may have to consciously stop. When I first began reading your letters section, it seemed that your replies were something along the lines of "Well, I wasn't going to comment on that, but now that you've brought it up...." This would bring the inevitable replies, which would be commented on, which would be replied to, etc, etc. I've noticed that many newspapers and magazines simply print the readers' comments and make no rebuttal whatsoever. While this may be an extreme in the opposite direction, I do think brevity should be given priority here. (As one person said, "Sure I know where the middle is because I've passed by it so many times going from one extreme to the other").

And lastly, I'd like to share with you a few names which I think might be apropos to your service to the on-line community. You might be called:

The Aladdin of Analog Computing.
The Brontosaurus of the Bitnet.
The Caricature of Communications technology.

The Doctor of Demos.

The Evangalist of Electronics.

The Finger (albeit fickle) of Future-ware.

The Gadfly of Gutenberg.

The Hippocrates of home computing.

The Ishtar of the Internet.

The 'Jack' of-all-trades.

The Kilobyte Klaus.

The Lamentor of landlines.

The Mentor of the Megabit.

The Nacelle of networking.

The Orca of on-line (apologies).

The Pundit of protocols.

The Rameses of Random Access Memory.

The Sultan of shareware.

The Tutankhamen of the Turin machine.

The Umbilical cord to the uninitiated.

The Vamp of Virtual.

The Were of Wolfenstein. The Xerxes of Xmodem.

The Yanoff of Yokefellows.

The Zygote of Zoroastrianism (gulp).

It seemed strangely normal to have a lengthly article about how the government was going to spend our money, when interspersed among the texts were clippings of X-rated bulletin board systems. Perhaps the most poetic justice could be found where the author mentions giving away cable to many of the residents of harlem, right next to an ad for a BBS located in area code 516.

Phillip Senn PSENN@delphi.com

Dear Phillip:

Strangely normal...normally strange.

I agree with your characterization of shareware, and find it very, very American in all respects. Where else can you make up something of your own on a PC in your basement, upload the result via telephone to someone else's computer, and within weeks distribute it to literally millions of people worldwide, and thereby start a company. It may be a little harder than that, but it is still doable. Something worth celebrating.

Perhaps I do go overboard with the replies. But it feels about right - As to my title, most just call me Jack. It's always worked.

Jack Rickard

Dear Editor:

Notice I didn't say "Jack" or start by complimenting you on what a wonderful superb fantastic mag you produce or how I read it cover-to-cover? <sarcasm mode off> Actually I have a "beef" with you - how come letters to the editor takes up so much room in the mag and you reply in such length. I'd prefer a much smaller space devoted to readers' rantings about smoking, Clinton, sysops explanations of why they prefer a specific hardware/software etc. Hey, stick to NEWS about boards! That's what we PAY for! We can read these whiners on the `nets anytime...without loosing space in our precious Boardwatch that could be put to more important use like ARTICLES! Hey, nowthere's-an idea! (no need to print this letter - no better yet - I REFUSE TO GIVE MY PERMISSION TO PRINT THIS WHINE - that's it! I hereby copyright this letter and refuse to give you permission to reproduce in part or whole ... that should do it ... but please consider what I said - it's the ONLY part of the magazine that sucks - and it sucks badly. I suggest you read the letters to the editor column in PC Mag for a nice "clean" look that I prefer.

Phew! That off my chest I'd like to give you some personal feedback on RIP, RoboBOARD/FX, FracTerm. The Rip terminal program is nice but incompatible with some hardware and the batch install is poor for novice users who don't realize how to install the program, and sometimes try to run the install .bat from the C: drive which will "bomb". Your grandmother could write a better batch file. I bought RoboBOARD/FX and must have gotten a "bad" copy - it simply would not work.

A fellow sysop's copy worked but I constantly got lost clusters which is a pain. Worse - I installed the free terminal program on a clients' NEC laptop and it TRASHED it! Rebooting produced "auxillary data line stuck low" followed by "EMM386 exception error - press ENTER to reboot" -repeatedly-. Sent computer back to dealer. Dead. I must admit that shook me up and lost me a customer! I've never seen that dataline error message ever before! Finally, Fracterm. I bought it on Jan 4th last year. Days later FRACTERM INC. went bankrupt. Actually they did a "midnight move" and now are unable to get VISA to trust them. Wonder why? <grin> They came back as Imagen Inc. and the dos version of their term program works well, if your video card is supported. And if you have lots of memory.

As for the Windows terminal program I have tested up to 1.1g and it's still only somewhat working. The print toolbar icon doesn't work at all and I get Page Fault and UAE's all the time on several different machines. One good UNDOC-UMENTED feature (well good for ANSI affectionados) is that the capture icon will capture the incoming data stream without deleting the escapes - so sysops can "steal" the ANSI art on other boards!

Anyhow it's late and this is the first time I've ever written to a magazine so I'll sign off now with best wishes for the holidays and new year...may you enjoy peace and good health.

Barrie Brown, Sysop Niagara On-Line (905)734-8827 MAXIMUS/FRACTERM bbrown@sandcastle.cosc.brocku.ca Barrie:

Sorry big guy, you lose again. Any letters sent to letters@boardwatch.com are OUR property and you have, by the act of sending it, allowed us to reprint it. Go for the lawyer thing if you like. Besides, I like whiners. If everyone sat around satisfied with everything, nobody would do anything. And it sounds like you've been very, very busy.

With regards to the letters section, I didn't really design it, it just rather grew. If you find PC Mag's letters section cleaner, you know where to find it. I determined early on that if anyone thought enough to write, I would take the time to respond. Actually, we have a pretty big segment of our readership now that claims to ONLY read the letters section, and it's become pretty popular. I agree it is unusual with regards to the way most magazines do it. For me that's part of the appeal.

It sounds like you have very bad luck with software. Actually, I'm a bit that way myself - it looks and sounds like a war is happening here when we install anything, and we're installing something all the time. But I haven't found any of the packages you mention quite as bad as you portray them. The whole genre of graphics software is a bit immature. (that's why we follow it here in Boardwatch with Jim Thompson's regular assault on graphics). There is a lot of demand for a graphic interface from a relatively small, but intense group who desperately want to put pictures online. I guess I think they'll get pieces of it right in the future. But for right now, our search for the graphic interface online continues.

Jack Rickard

To the Editors.

In your November issue, you had a list of Albertan BBS's. I wanted to browse some new BBS's I probably never heard of, so I picked up a copy. I was disappointed to find that the majority of the numbers were in Calgary and local area. Edmonton has some fine BBS's too! In the future, if you list BBS's for a certain province or state, try to list BBS's to all the major cities and areas, not just one.

Thanks for your time!

jwondga@valis.ampr.ab.ca (Smudge)

Smudge:

Ok, we'll try.

Jack Rickard

Jack,

In your response to Mark Smith's letter in the last issue you made an issue about morality concerning the Great Smoking Debate. How are automobiles and electricity related to the mortality rate for smokers (and those affected by second hand smoke). Obviously people are killed in alarming numbers because of traffic fatalities. People are also killed by electrocution as well but how can you compare smoking with these two things?

Of what benefit is smoking other than the physical and psychological sensation associated with the act of lighting up? Do cigarettes power your computer? Can they transport from home to office? do you get my point?

Anyone who uses cars or electricity assumes risks so that they may benefit from these necessities. You may be aware of the risks involved in smoking but don't compare those risks to other more necessary risks.

Christopher Walsh
Chris_Walsh@magic-bbs.corp.apple.com

Mr. Walsh:

And who get's to decide what is necessary? Are you implying that 25% of the adult population of North America took up smoking for no reason and no benefit? The world doesn't work that way. And no, necessary doesn't really play into it. The context was that "things that are dangerous should not be allowed" and my reply was that of course they should, and they are, and for good reason. Now you've tied that to "necessary," again, a fuzzy logical choice. Automobiles and electricity were both done without for nearly 4 billion years, and have been in use less than 150 years in both cases. Of course they are not necessary. Certainly they have benefits, as does smoking.

We all have to make these choices. In the case of cigarettes, we seem to have bred another little advocacy group of the feeble-minded who want to dictate everyone's choice. You'll never sell it here guy.

Jack Rickard

Dear Jack:

I am reading my second copy of your magazine. It's great! I am quite naive in communications. In the article about Phil Zimmerman, in Nov 93, you mentioned his program, PGP23A.ZIP

& PGP23ASR.ZIP, but did not mention WHERE to obtain a copy of same. I tried your BBS. I also belong to it, but no luck. Was it a typo? Where can I obtain a copy of same.

Your letters column is the neatest section of the mag to me. The international activity is most interesting. As a physician, I find it most impressive so many people "travel" over the wire from all over the world.

Keep up the good work!

Thanks, A. L. (Sonny) Shaw 72446,133@compuserve.com

Sonny:

Pleased you enjoy the publication. Actually, both files are indeed on our Boardwatch BBS at (303)973-4222, and were there since before we did the article. Look in the INTERNET FILES file area. You can do a search of the file area by entering **L PGP** from the download command line.

Jack Rickard

Dear Mr. Rickard,

As with all editors, you enjoy the benefit of always having the last word, an edge you use to great advantage in making a good percentage of your readers who dare to express opinions alien to your own appear to be total idiots. However, it is, in fact, your total irreverence for the ideas of others that makes your publication so entertaining! My own meager efforts to ellicit a virulent response met with greater success than I could have imagined.

You are truly extraordinary—one has to admire an arrogant man who not only openly acknowledges but also takes considerable pride in his arrogance! However, as much as I enjoy your cynicism on a wide range of topics, including public education, there is often a tendency among those who are forever expressing their opposition to virtually everything, to do so without offering viable alternatives. For instance, how would YOU use those billions of dollars being sucked from our national resources to deliver a public education system that actually works?—keeping in mind the realities of a political system that is now run by minorities and special interest groups, all of which demand that EVERY-THING cater to the absolute lowest common denominator, and none of whom has a clue how a "federal republic" is SUPPOSED to operate, much less that that is indeed the form of government our Founding Fathers laid out for this country. A "workable solution" (if such a thing exists for this particular dilemma!) would also have to accommodate the fact that we in the United States now live under a "judicial monarchy" where any corrections you MIGHT be able to herd through some political process would then face the inevitable "legal challenges" from one disgruntled delegation or another. In a country where everyone has RIGHTS to everything, but responsibility for nothing, what else could you expect?

As stated before, I fully agree with you that, contrary to what the NEA would have everyone believe, simply pouring more money on the problem is not a solution, but still disagree that parents, as you so strongly indicate, have NO responsibility whatsoever in the process (and I am not talking about "home education"). Having been beaten around the head and shoulders by your obviously vast and impeccable "parental experience" defense, I find it all the more puzzling how you can so cavalierly dismiss parental responsibilities in the educational process. No, I am not saying that it takes the "professional educators" off the hook entirely, yet how can they be expected to control, much less TEACH, classrooms full of individuals the majority of whom have had little expected of them at home in the way of respect, discipline, persistence, or other such elements that are essential in any meaningful educational context? Even if you eliminated all of the NEA's inane concepts of how students should be taught, and as you point out there are lots of those off-the-wall notions rattling around in the heads of those "professionals," you would still be faced with the fallow wasteland of indifferent, disrespectful "students" and a cadre of parents who expect those educators to fulfill not only the role of teachers, but also that of parents, without, of course, allowing them to utilize even a modicum of minor disciplinary measures. It is too much to expect of anyone, especially a group of "professionals" who mirror our society's current obsession with "self-esteem." Modern educational theory values "self-esteem" (a murky notion in itself) over substance. Indeed, it has perpetrated another feat of reality reversal, wherein we are supposed to believe that if you somehow instill "selfesteem" in a student, accomplishment will follow. Sure!

Then again, as you also so clearly pointed out, I am nothing more than a simpleton void of anything other than ignorant beliefs that you find so repugnant and difficult to eradicate—one more filthy ring around the collar of humanity. Your efforts to elucidate such bump-

kins as myself are at once provocative and colorfully entertaining. Of course, my self-esteem is now in a complete shambles and I have become dysfunctional as a consequence! Nevertheless, keep up the good work on all fronts!

Ignorantly yours,
Bill Sphar
billsphar@aol.com
P. S.
He who can, does;
He who can't, teaches;
He who can't teach, teaches others to teach. Amen!

Bill:

Well, mostly, you make it so EASY that it's hard to resist. You've got more on your mind than I have on my desk, and I'm sure it causes cerebral clutter. I can imagine the world is very confusing. It is not a pride of arrogance, rather, within certain communities, I want my arrogance widely and clearly displayed, lest someone mistake me for one of the locals when I'm just visiting/observing.

As to the solution challenge, like the offspring miss, you lose again. Here it is big guy.

As a rational and logical person, you have to sort the wheat from the pig droppings. Your previous faux pas about my ability or experience in siring children wasn't an information problem, it was a symptom of a PROCESS problem. If the horse has a broken leg and a bullet in the neck, reshoeing him, while probably a good idea, is not the first order of business. Similarly, your rant against advocacy groups, our monarchial judiciary, the poor discipline instilled by parents, and so forth may each or none have genuine merit. They're not the cause of the "problem" and are a little peripheral to the discussion I'm afraid.

How would I use all those BILLIONS of public dollars? The first thing I would do is give them back. The demise of education in this country, and the beginning of the grand doleout of federal dollars from a centralized national government to support education, coincide, coincidentally I'm sure, to a matter of days as best I can measure it. It could have happened the same afternoon. Education worked best when funded, administered, and controlled locally. No effort ever made by the federal government of the United States has resulted in any single solitary improvement in education that I can find. I might have missed one, but I doubt it.

My current position is to allow a few more years for the education community to try to wash its own linen. I rather suspect that success in education in this country will tall to private education, and we are headed rather rapidly then toward a "class" system that goes beyond the class room. But if tasked directly with resurrecting our current public, universal, and free system:

- 1. Dismiss everyone currently involved in education from the payroll. The good, the bad, and those standing around in the immediate vicinity. Not only would they be dismissed, but barred from future employment in education. Given that there are actually a number of teachers who are actually very good, this will be quite painful. Unfortunately, it isn't optional. This one not likely to be really a popular item with NEA.
- 2. Recruit teachers from the ranks of those retired and over the age of 65. The only exception would be those retired from the military at an earlier age. The idea here is to recruit a group of people who have at least SEEN the inside of a working, functional classroom that taught people something. They don't have to have taught, just SAT in a working classroom.
- 3. Cut the salaries of all teachers by 30%. Frankly, contrary to popular opinion, teachers are NOT underpaid. Quite the contrary. The system is riddled with gold diggers that could care less about education, and a great deal about their own salary, their next grant, etc. They clog the system and make it a very unpleasant environment for those who teach because they view it as a higher calling, and a valuable contribution to our children and our society. There has never been ANY indication that higher pay equates to higher performance in education, and numerous indications to the contrary.
- 4. Mandate Performance Based Education. This involves standardized tests. students taking them, and results - all anathema to our current education system that holds that children's self esteem is damaged by these performance measurements. The act of debating the current state of our educational system has been seriously hampered by a conscious and deliberate movement by the teaching profession and NEA to remove any means of measurement - under a horrendously dubious claim of sheltering students from damaging emotional trauma. This is shameless fraud. Students should compete with each other and against their own personal best. Not against "teacher expectations" or up to their "potential", but rather against the hard numbers and percentages that are used to measure life - as well as educational progress. Our students are not only leaving school uneducated, but they don't even know they ARE uneducated.

Nobody told them, and they have nothing to measure themselves against.

- 5. Establish requirements for future educators. I rather gather you would not be opposed to requiring that the people we entrust to educate our children be at least able to graduate in the top third of their own class in the process of completing their own education? Would you like to guess where they statistically come from NOW???
- 6. Establish an Education Mission Statement - cast into law, clearly asserting that the "mission" of education is to teach - and removing any doubt as to whether our educational system should/ought/could serve as child care center, social services adjunct, child abuse watch, political indoctrination machine, religious defoliation mechanism, or anything else of a social or political nature. If students can perform math, science, and language arts, they win. If teachers want to promote the environment, a new liberal democrat social order, or double bagging of groceries, they lose. Every funding decision, curriculum proposal, etc to be measured against this mission state-

On an advanced topic, not even broached as yet, I would like to see free education extended to our university system, and an alternative University "track" established with no vocational component at all. This would be a series of universities that were NOT devoted to preparing anyone for a job, but rather to provide what used to be termed a "University Education" to that 15% of the population always historically capable of being educated at the University level. This track would involve courses in art, history, science, mathematics, languages, literature, poetry, geography, and music. It would seek to extract the best of that developed over the past 10,000 years and present it in a four year forum without regard or prejudice to what the student might use it for later, whether or not they will attain a BMW motorcar, or how useful General Motors or Microsoft thought such education might be. There would be no business courses, no management courses, no law courses, no "useful" courses of any kind. And you would have to graduate in the top 20% of your high school class to be eligible to attend.

Finally, your self esteem must be based on Bill Sphar, not Jack Rickard. Similarly, our children's self esteem never did rest with the educational system.

Jack Rickard

ves Deliver OPTIMA V.FC + FAX Hayes[®] AA

Introducing an incredible breakthrough in dial-up modem technology. A modem so fast it will exceed your expectations now and in the future. Introducing the Hayes® OPTIMA $^{\text{M}}$ 288 V.FC $^{\text{M}}$ + FAX.

Instantly Compatible. Hayes OPTIMA 288 incorporates

the *V.Fast Class*™ 28,800 bit/s technology developed by Hayes and Rockwell International. The same technology that's being

supported by more than 125 other modem manufacturers worldwide as the new industry standard for high-speed performance. The OPTIMA 288 not only communicates with other *V.Fast Class* modems, it will work with future Hayes modems incorporating the ITU-T V.34 (V.Fast) standard. And, it communicates easily with the installed base of 14,400, 9,600 and 2,400 bit/s modems.

Four Times Faster Than

Faster Than You Think. You might expect a 28,800 bit/s modem to transfer compressed data at 115,200 bit/s. With Hayes enhanced V.42bis, you can expect twice that speed. OPTIMA 288 supports port speeds up to 230,400 bit/s and transfers pre-compressed files from 30,000 to 34,000 characters per second. Our OPTIMA

288 is a powerful solution for remote connectivity to or from a LAN, remote PC control, transferring large files, or multi-media. You could save as much as 75% on long distance charges. Like all higher speed Hayes modems, our OPTIMA 288

Go Online With Hayes BBS: call 800-874-2937 or 404-446-6336. ©1993 Hayes Microcomputer Products, Inc., P.O. Box 105203, Atlanta, GA 30348. OPTIMA, and Smartcom are trademarks of Hayes Microcomputer Products, Inc. V.Fast Class and V.FC are trademarks

A 14,400 Bit/s Modem!

Hello There Jack,

First of all, I want to thank you for printing my letter in your December issue. I just started my subscription this week and already I received this issue. Up here in Canada, I usually don't get the new issue on the stands until the middle or the end of the month.

I had written the first letter I sent you quite a bit before it was published, therefore I didn't know about the Ontario/Alberta BBS listing in the November issue. By the way, that was great! I have contacted the author of the list to get my system added to it. Now, if I could only figure out how to get my system added to YOUR national list (I wonder why you call it "National" when there are systems from Canada, Holland, and a few other nice places).

If you remember, in my last letter I asked about a Canadian UUCP HOST site, well to save you some long distance \$\$, and to save your Canadian callers some frustration if they want to be hooked up to the Internet, I will supply the name, number, and address of MY UUCP Provider. Thanks Jack for an excellent magazine, with top notch information, and thanks again for including us Canucks in your modem adventures.

Canadian UUCP Host, with local access to many Canadian cities:

UUNET Canada Inc. 1 Yonge St. Suite 1400 Toronto, Ontario M5E 1J9

Telephone (416) 368-6621 info@uunet.ca

All of this from: Dan Williams The Adults At Play BBS (R) (416) 237-1010 info@aaplay.org

Dan:

Well, the vagaries of the print publishing time zone I fear. In any event, I'm pleased you enjoyed our visit up north in that issue. Canada has actually always been very kind to Boardwatch, going back many years, a combination of wide-spread literacy and long cold nights I would guess.

Thanks for the note on your UUCP host. We'll add them to the list. It does come up often.

Jack Rickard

Dear Jack, since I ran the IBM OS/2 2.1 SysOp offer in August at One BBSCON, I've had several of the packages returned due to incorrect addresses, people moving (yes, really!) and or not returned DHL's notices. Yet I feel these folks really wanted the OS/2 packages, but don't know how to contact me.

For those that still have the program guide, I'm listed under IBM Corporation with a phone number or they can send Internet mail to me at: vicci@vnet.ibm.com.

Please note this is only for those that had previously signed up for a package, not new orders and almost all of the returned packages are from outside the US.

So, if you signed up and haven't received your package, PLEASE contact me so we can get it to you.

Thanks!

Vicci Conway
IBM Corporation
Boca Raton, FL
vicci@vnet.ibm.com

PS - I'll be coordinating IBM's return again next year and look forward to seeing you there!

Vicci:

Thanks for the note, perhaps by publishing it in the letters section we can help you round up a few lost souls. By way of explanation to everyone else, IBM ran a show "special" at the ONE BBSCON this past August offering a copy of OS/2 Version 2.1 to any BBS operator that would put up an OS/2 support area on their BBS. They ran out of the 300 copies they brought the first day, and took names promising delivery to the rest.

We do hope the OS/2 promotion was valuable both to IBM and most especially to our attendees, and we look forward to your participation next year.

Jack Rickard

Dear Jack Rickard,

Regarding the letter from Jack Linde in the December '93 issue:

Jack's singing the praises of NT forces me to respond; partially tongue in cheek, partially promoting OS/2, partially serious.

ANY BBS software that is multi-node

capable (Remote Access is mentioned; I'll mention Maximus CBCS) and network/multi-machine dependant (PCBoard) can benefit from a pre-emptive multitasking operating system offered, such as Windows NT 3.1 (version 3.1 for a first release???) or IBM's OS/2 2.x. It will benefit even more from a port or rewrite to native 16 (or 32?) bit code for either the NT or OS/2 operating system.

The crux of the matter is that there is no existing NT code for a BBS (that I know of) and darn little for OS/2 2.x. I only know of Maximus/2 2.x CBCS, Multi-Net and now Magnum BBS listed in the December issue's BBS Software Vendors list (I learn yet another tidbit from Boardwatch Magazine, thanks Jack). Lets not forget about BinkleyTerm/2 2.5x for an OS/2 mailer.

I've also yet to hear anything about the communications capabilities of NT, though if it's anything like OS/2, will work superbly with native code.

I have been running a single line OS/2 based BBS using BinkleyTerm/2 and Maximus/2 CBCS for over a year and found it to be a flawless performer. Others can verify multi-node performance and/or networked performance.

Rumour has it that the next release of Maximus CBCS will not include a DOS version; OS/2 2.x only. How's that for commitment?

The TCP/IP 2.0 release that comes with OS/2 is now effectively bug-free and will allow that all important Internet connection with (relative) ease. The TCP/IP 1.x release was admittedly buggy to the point of being practically impossible to install, what with patches and CSD's galore coming from IBM.

I'm also aware of some patches and hacks to allow PCBoard to run under OS/2, but do not know of any success stories.

As for an OS/2 vs NT shootout; well, a favorite slogan of mine is, "OS/2; up and running, not up and coming."

You might also note that I've heard that virtually every Fidonet hub is now running under OS/2. Can someone verify this? George Peace?

The showing of IBM at ONE BBSCon, and their OS/2 giveaway has indeed opened a few eyes and the number of systems contemplating (or making) the move is mushrooming (at least in the Vancouver, BC area).

NT as a workstation OS is also highly suspect; far too many resources needed. As a network operating system, it's got something going for it. The SMP capabilities are also somewhat suspect, but that's another thesis.

But why wait for NT? OS/2 will do it for you NOW.

ISDN is a bad dream. It's been dangled like a carrot in front of us for too long. The telcos want to overcharge us to use it, and it will quickly die if someone doesn't step in to save it very soon. They can't even agree on a single ISDN standard amongst themselves, fer cryin' out loud!

I'm fearful ISDN is going to suffer the same fate as UNIX, which has been touted as 'The Operating System Of The Future' for the past ten years. It ain't gonna happen, much as I would like it to.

I'm afraid my crystal ball is most likely just as murky as yours is Jack. Neither one of us can predict what the future holds for us in the telecommunications world. I believe you are right when you suggest that BBS and the Internet will intertwine to the extent neither will come out intact. But that's just part of the picture.

It's a fast moving world we live in; an exciting one to be part of. I'll retire from my OS/2 soapbox, now. Keep up the fine work, Jack, et al.

John Cathie Sysop, John's Bar & Grill New Westminster, BC Canada (604) 522-7578 John.Cathie@f738.n153.z1.ship.net

John:

Thanks. It IS after all the journey that is exciting. Once we arrive, I'm on to something else.

I agree OS/2 offers some promise. I guess I'm not sold on it as a multi-line platform for existing BBS software, but it certainly seems promising if someone would actually write or port their code to a 32-bit application.

That said, to my knowledge NONE of the FidoNet backbone echomail hubs run OS/2 at all at this date. I'm told, and have not confirmed, that the last one converted to multiline TBBS for FidoNet echomail duties within the past month, and that all backbone hubs run multiline TBBS now. I do know that George Peace does apparently to some success.

However, I went to some extra effort to

roll out the red carpet to IBM at last year's ONE BBSCON, and I think they followed up with an outstanding offer of OS/2 to attendees (I'm told over 300 OS/2 2.1 packages were basically given away at the show to BBS operators). It was, and is, my belief that a BBS package written for this package could easily do 8 lines per machine, even at high modem speeds, and be guite LANable, which would cure an economic flaw in the LANable BBS software we have looked at to date. The main barrier here is knowledge and familiarity, and the invitation to IBM and their distribution program at the show were designed to help alleviate that. I think in time it might. I would love to see one of the smaller contenders along the lines of Searchlight, Roboboard FX, or Remote Access carve a substantial niche for themselves with a port to an OS/2 operating system. Frankly, Maximus and Multi-Net, currently on the OS/2 platform widely, haven't done much for me, nor caused much of a stir in the online community. I understand VBBS is available in an OS/2 version and we plan on taking a closer look there. We did review the OS/2 Shareware BBS in last issue, and it was capable primarily in the efforts of the sysop in cataloging a lot of shareware, not in the BBS interface or capabilities.

Historically, we would have to bet Windows NT trounces OS/2 in the wider computer venue, because that's what Microsoft does. But OS/2 has clearly gained a fervent, if minority, following. And I see no reason why it could not win pretty big in the BBS community, and that is now a large enough community to be considered a win. We do intend more testing of OS/2 and their TCP/IP implementation soon here at Boardwatch. And we'll keep you apprised of anything interesting we find there.

Jack Rickard

Dear Jack:

I've found your magazine to be an endless source for useful information since I've subscribed, and always look forward to it.

I'd like to bring a product called UUPC from Kendra Electronic Wonderworks (KEW) to your attention. UUPC is the best uucp mail package I've ever run into and it comes in DOS, OS/2, Windoze[sp.], and Windoze NoT flavors.

I think it's very good for these reasons:

- 1. Very very good documentaion.
- 2. Great support.
- 3. Complete mail reader.
- 4. Ease of installation

KEW may be reached at: Kendra Electronic Wonderworks P.O. Box 132 Arlington MA 02174 (617)641-3452 info@kew.com

I would encourage anyone who needs a UUCICO or uucp mail system to ask them about UUPC. They don't have a direct uucp <——> BBS mail solution, but together with the Silver Xpress mail door I hope to have something working shortly.

Regards,

Erik Squires
Metagraphics Software Corporation
269 Mt. Hermon Rd., Ste. 104
Scotts Valley, CA 95066
erik@metagraphics.com
BBS: (408) 438-5368

Erik:

And so you have. Thanks for the note, it does sound interesting, and we'll try to contact them soonest.

Jack Rickard

Jack, I was reading your reply to Dave Holohan about what he goes through to get his copy of Boardwatch, and yesterday (when I got my copy via US Mail) brought with it the perfect answer. Condition. Last month I got my issue with the cover detatched, and this month the letter carrier left it on my front porch, by the screen door in a puddle of water. *sigh* I've found Boardwatch at Powell's Technical Bookstore, and at a tiny newsstand around the corner where I used to work, They were surprised when I asked for it. They thought it was some kind of ham radio magazine! I run a small one-line system here (shameless plug...The Overworked Dragon BBS (503)256-8451) and I find BW to be interesting, informative and well worth the subscription. Now if I could only get the letter carrier to walk up 3 steps and put the magazine in the mail box! Thank you for Boardwatch, it's nice to get something worthwhile for my money!

Katherine Stewart Katherine.Stewart@f56.n105.z1.fidonet .org

Katherine:

Postal delivery is always a problem. Our biggest challenge there is getting it through a company mail room into a subscriber's hands. They tend to take a walk quite often. The November issue cover drama has been the subject of some

extraordinary meetings here at Boardwatch. We had a LOT of people report covers coming off. My initial reaction was that it was time to go to a heavier cover stock, or go to what is known as "perfect binding" for our magazine, and the implementation of this got a little heated actually.

What we found was that Boardwatch for nearly a year has been saddle stitched with three staples. For some reason, the November issue was shipped with TWO staples. For want of a nail, a shoe was lost.....

I can assure you there are some people who are very unhappy over the November cover.... in addition to our readers. And I think you can count on receiving all three of the staples you paid for in the future.

We'll be happy to replace any damaged November issues.

Jack Rickard

Hello Jack,

I am not really a magazine editor letter type but there a few things I would like to pass on to you.

- 1. I hadn't ever heard of Boardwatch until I received a free complimentary issue. About four minutes into the mag I phoned in for a subscription. Brilliant marketing move! If you can get a user list for Delphi and other services and send out a few freebies like you did to me you should increase your sales dramatically.
- 2. Speaking of Delphi, this is the best Internet source for me around. For twenty dollars a month I get all the regular stuff plus the Internet. Granted President Clinton can probably do more I-Net stuff than me but I can do plenty. FTP, WWW, Telnet, Gopher and lots more. I even FTP'd the "Yanoff List" (ftp csd4.csd.uwm.edu

login annonymous cd pub get inet.services.txt.

Some users will have to rename the file in Delphi to a more usable name for their OS before they can download and print it. This list enabled me to get my own account at Denver U.

3. In the December issue of Boardwatch Mr. Petrus van Breda mentioned on-line banking. I have been using the Checkfree service since June of 1992. For \$9.95 a month I can send up to 20 electronic checks. The one time I was billed

twice all I did was call Checkfree and forget about it. Both Delphi and Checkfree are local calls and only cost me a total of \$29.95 per month. Thanks to these services I do not own a postage stamp and I use my remaining envelopes for grocery lists.

4. I do not work for either service, I am just so pleased with them that I like to recommend them to others.

Frank J. Santeramo doink@delphi.com fsantera@nyx.cs.du.edu

Dear Frank:

And we're glad to hear about them. Services done well are worthy of note. I think word is particularly getting around about Delphi. Full Internet access for a buck an hour is indeed a bargain, and I think they've moved pretty aggressively to play this chip against the other online services, to some success.

To tell you the truth, we've done a pretty miserable job of marketing Boardwatch all along. It started as a newsletter, and I pretty much took the attitude that if it is done well, the world will find it somehow. That's pretty naive, but it actually worked for the most part. We actually have done pretty well over time via word of mouth. But beginning this year, we will probably be so rash as to start a genuine direct mail marketing program like every other magazine on the planet just to see what happens.

Jack Rickard

Dear Jack (and Jim Warren):

Jim Warren's article in Dec 93 issue about California's New Legislative Access was the best short guide to citizen legislative activism that I've ever seen. How strange and wonderful to find it in a magazine devoted to the BBS world! Perhaps you should change your subtitle to "Boardwatch: Access to Power." I sometimes read public policy magazines (Reason, Liberty, New Republic), and I've never seen a how-to article like this one. I urge you to re-sell it to one of these magazines. They need it.

I also want to tell you why people would rather go to a newsstand or bookstore to buy Boardwatch despite the inconvenience. I consider these stores to be my personal reference libraries. I like to keep up with what's new, and newsstands and bookstores have a better selection than public libraries (which provide good archival facilities). I'm a subscriber, but I still buy newsstand

copies when I want to have one for the office, and I first found out about your magazine when I saw one in a computer bookstore. It is very important that you convince your distributor to keep copies available all month, which I'm sure you know already.

Dale Dellutri ddellutri@aol.com

Dale:

One of the things I've pretty much insisted on from the beginning is that there is virtually nothing that "doesn't belong" in Boardwatch Magazine. If we find it interesting, we assume it is because it is interesting, and if interesting to us, of likely interest to our readers. This causes some strange things to appear in Boardwatch at times. But in my mind, Jim Warren's column is a pretty natural fit. As the online community emerges, and as these technologies mature, it is pretty natural that the largest single information collection entity on the planet, our government, should be taken to task when it doesn't get with the program.

Jim Warren is probably the most qualified person I know to untangle the often complex labyrinth of political intrigue and reasoning behind why they think our information isn't ours. What is most encouraging about his column and this topic, is that it takes so little to move mountains. Most of the chicanery going on depends absolutely on being accomplished in the shadows, out of public scrutiny, and on the assumption that no one will notice or care. A single column in Boardwatch, a few dozen letters to the right places (and he tends to know the right places), and the rats scurry for cover with a predictability that is actually a little saddening. Should even a small portion of our readership take his column as an action item each month, and these sweetheart deals where the citizenry gets cut out of the information age will cease quite utterly.

We look for big things from this column in the future.

Jack Rickard

Mr. Rickard,

We are Internet providers in Charlotte, NC. Please add us to your list of UUCP providers. Here is the information about our rates. If you have any questions, please feel free to contact me at VOICE: (704) 338-4670,

FAX: (704) 338-4679, or tlt@fx.net.

Terri Thomas FXnet

Charlotte NC 28227 Voice: (704) 338-4670 Fax: (704) 338-4679 info@fx.net

Low Usage UUCP \$30 per month plus \$1 per hour No installation

High Usage UUCP \$60 per month plus \$0.50 per hour No installation

Terri:

So added, and thank you for the information.

Jack Rickard

Hi Mr Rickard:

I am commenting on one of your letters from the December Issue. Where the person can't find Boardwatch Magazine on the newstands. Well where I live I find it at a store called "The Paper Store", and they expect me every month to show up there. I have read the other magazines that also try to explain BBS's, but they fall short with their writings.

They kind of lose prespective of the reader and they go off in different directions with articles. Now as to Boardwatch I can understand the writing in your magazine you explain it in english, so we are not bored with long winded technical explanations. Also your articles move by quickly you get us to the point not to put us to sleep. So keep it coming.

Now to another point about that letter in the Dec93 issue, about getting a subscription to buying it at the news stand. Some people don't have 36 or 59 dollars at once to get a subscriptions, sometimes we only have the \$3.95 in our pockets once a month. Also some people like to skip a issue and buy the next one. (except for me I get the mag every month) I hope I helped you with your answer. Thanks for listening

Alan Rupa

internet address:
PXJT15A@PRODIGY.COM

Alan.

Thanks for writing. I'm pleased you find Boardwatch readable, and available however you get it.

Jack Rickard

Dear Jack Rickard

I bought BOARDWATCH at the news stand for a few issues, then your logic struck me also - why pay more - a subscription is a great deal! And I don't have to gamble and maybe miss out on a single issue.

I had two reasons for writing you, well maybe three if you count the possibility of me seeing my name in your column. <G>

The first reason was to ask you if it was a copyright infrigement to compile BW's 100 BBS's LIST or the monthly BBS LIST in some of the different COM directory formats; ie Qmodem, ProComm, ProCom+, Telix, Telmate, & Text File, (as long as full credit was given) ZIP them and U/L them to BBS's. This isn't for profit - not even to meet ratio.

The second reason was just to see if I could successfully send a letter through the Internet E mail. Thanks for a great Mag.

P.S. How's the Little Rickard? joel.burgess@indy.com

Joel:

Well, you didn't do badly with that one. First, you did get your name in our letters column. Secondly, your Internet mail made it just fine. Finally, the Boardwatch National list is copyrighted, and we would consider it an infringement. The Boardwatch 100 Reader's Choice list is technically copyrighted, but our mission is the widest possible dissemination of these BBS numbers, which our READERS selected as the 100 they like the best. You may incorporate this listing in anything you like, wherever you like it.

Jack Rickard

Dear Jack,

I am an enthusiatic reader of BW magazine. I want to let you know that we at IMSATT Corp. have started a new online educational service called HOMER - short for Home Education

Resource Network. I hope you will give us some space. We have a registration and information BBS at 703-533-7566. Once registered you can download our special access software for PC and access HOMER (which is on a mainframe) through Internet by telnet to 129.179.62.5. We can also be accessed through CompuServe network (host name is HOMER). HOMER offers accredited curriculum (K-College) as well as access to schools (Calvert and North Dakota) which offer distance education. Charges are \$3 per hour plus connect time. I hope you will try it and let me know what you think.

Narsiman Kannan

President

nat_kannan/homer/cdc@odin.calr.um d.edu

Ok Nat, you got some space. Actually, I'm pretty interested in the home education movement, and I'm sure our readers will be as well.

Jack Rickard

Dear Mr. Rickard,

I just put the check for my renewal in the mail—only a few months late. Most folks would have stopped sending the magazine, but you've continued to send Boardwatch, and I wanted to say 'Thanks!' I didn't have the money to renew until now, but I would have missed your magazine. It's not that the information in Boardwatch isn't available elsewhere: your magazine does a great job of filtering the information so I can use it, and the occasional chuckle—and dare we say it, the use of the G-word—doesn't hurt, either. (Besides, you can't beat the dog with a rolled-up laptop...just kidding!)

I agree with you that BBS's are destined to be the on-ramp to the Internet for many folks in the near future. Folks who spend a lot of time writing shell scripts and hacking their .plan file too often forget that the average user doesn't want-often doesn't have time for—anything more complicated than 'what button do I push?' Most people want information so they can *use* it, not because they enjoy finding it, or collecting it, or even giving it to others. Only a minority of us are that insane; in the BBS world we're called sysops. ;-)

All PCBoard SysOps are winners, but we'd like to spotlight a few.

Boardwatch Magazine September 1993 Readers Choice Awards.

FIRST PLACE SOFTWARE CREATIONS

The top BBS in the Boardwatch 100 Readers' Choice Contest was

Dan Linton's Software Creations BBS in Clinton, Massachusetts. The system started in December 1989 with one telephone line on a DTK XT, a 2400 pbs modem, and a 209 MB hard drive. By the following October, the system was up to 4 lines, using U.S. Robotics HST Dual Standard modems, a 386 MB hard drive, and a LANtastic network to tie the computers together under

PCBoard BBS software. With Linton's background in hardware design, the system largely served as a technical information center for other local BBS operators.

In March 1991, Linton released his first shareware program, titled Picture Puzzle. The popularity of the system increased as it became known as the home system of Picture Puzzle. As more and more BBS operators and callers from around the country called to get the latest version of this software, Creations blossomed. Today, Software Creations runs PCBoard version 15.0, Novell 3.11 local area network, and other top services. Dan has developed a following around the country. Congratulations Dan. For those interested, you can reach Software Creations' BBS at 508-368-7139.

These are just a few of the many PCBOARD users in the top 100 readers choice poll.

1993 DVORAK/ZOOM TELECOMMUNICATIONS AWARD

DNIS Data Port Network Information System for Outstanding BBS Gateway To Multiple Information Services.

The DNIS bulletin board of Michael Simmons

is an excellent example of a low-cost feature-rich community bulletin board system serving the resort community

of Palm Springs, CA. Unique features of DNIS include extraordinary customization of high speed information ex-change services such as *United Press International*, stock market quotes, reports from major brokerage firms, *Business News*, *TechWire* and many others. By 1994 DNIS plans to expand its PCBoard to over 12 lines with 13 gigabytes. Congratulations Michael. Call DNIS' BBS at (619) 864-1468.

AQUILA BBS for Outstanding BBS Organization, Features, and Design

Aquila has grown into a professional, high

quality, online service. Being the first to work with new technology, Aquila has tested and researched many new

products over the past several years. New modems, drives, networks, ISDN interfaces, satellite feeds and many types of software are only some of the technology the team at Aquila has tested. The Aquila a team is now one of the industry leaders sporting 8 gigs of on-line storage, 42 access lines, ISDN Digital access, and much more. Congratulations Steve Williams and crew.

Aquila's BBS number is (708) 820-8344.

THE NEW PCBOARD V15.0 HAS "FEATURES UNLIMITED."

This long-awaited version of PCBoard is the most configurable, fastest and most powerful PCBoard ever. With the optional new PCBoard Programming Language, or PPL, the configuration options are virtually limitless. The BASIC-like command structure of PPL allows you to write your own modifications, routines, or even applications right into PCBoard, giving your

enhancements the same look and seamless feel of native PCBoard commands. This BBS is state-of-the-art.

For the a demo disk and for more information call 1-801-261-1686. For Orders call 800-356-1686.

DVORAK **O**NLINE

STAGNANT PONDS AND BILL CLINTON

by John C. Dvorak

The Internet is growing by a hundred thousand to a million users every month depending on whose numbers you use. Have any of the computer magazines noticed this? Are the BBS operators following the trend? Does Compuserve realize that the Internet can put Compuserve (and Prodigy and whatever else shows up) out of business in a minute? Same

holds true for the e-mail providers such as MCI. Almost half the messages I receive over MCI are from Internet users. How long will I continue to pay to send these people messages while they send messages to me for free? Not much longer, that's how long. The Internet is a phenomenon, but it may be hiding more important trends.

The personal computer scene has degenerated over the last decade. The computer magazines (bless 'em, they pay my salary) have all followed the route of PC Magazine, orienting themselves towards the serious business computer user. This reader (95%

males) works at some company and reads PC Magazine so he can know everything there is to know about what printer or computer to buy. There are about a million of these fellows. Other computer magazines are similarly interested in these people and most magazines have a strong bent towards selling new equipment into large corporations.

Some years ago I noticed that the hobbyist had largely abandoned the magazines and rarely went to local users groups. The most motivated of computer enthusiasts were soon heavily into the BBS scene which was largely ignored by the media-at-large. That is, unless some kiddie-porn nutball was arrested and confessed that he used e-mail on a BBS to make contact with an 11- year-old. Luckily that happened less than it could have happened. Since the overwhelming number of BBS systems are used by special interest groups and hobbyists their reputations remained good. Even the few porn-oriented boards that were busted were not overly publicized. When did you see the last article in the New York Times about porn BBS's?

While the core hobbyist community ended up on-line they stagnated there to some extent. The influence of the on-line BBS community on the rest of computing was negligible. Even the expense account on-line junkies who could spend company money for hours of on-line Compuserve time were little more than whispers in the breeze. I can tell you from experience that you can scream and shout all you want about something on-line and it has virtually no impact when compared to a one-line mention of something in PC Magazine or PC/Computing. Even Boardwatch is more influential than all the on-line put together. If you think about it why does Boardwatch even exist? Shouldn't it be on-line? No, because on-line is like a disposable diaper — forgotten as fast as possible. In fact, I'm stunned when people react to the lone on-line voice condemning or criticizing something. On-line vitriol (unless it's a prolonged flaming session that goes on for years) is forgotten so fast that it's amazing. Only broadcast news is as quickly lost in the ether. How soon the public forgets that which

is put to them through electronic means.

So this crowd has formed a noninfluential stagnant pond. Now comes the Internet with its promise of a virtual BBS, datawarehouse, free program depository, international CB, dating service, news gathering, etc., etc. Internet sounds like it does everything and, except for a pesky monthly charge, it's free! The Internet has become the new IBM PC - a spark to ignite a new generation of computer users worldwide. It's 1981 all over again as newcomers jump on the computing bandwagon. Internet is the ham radio of the 1990's. Only you don't have to learn morse code and you can use it for whatever you want. You can use the Internet for your company e-mail. You can use it to meet girls. You can use it to collect digital music.

I can go on and on with the potential use for the Internet. The first fallout from the Internet are terrible poorly written books about the Internet. There must be a hundred books and more coming as everyone tries to jump on the Internet bandwagon.

So what are the drawbacks to the Internet. Bandwidth for one. Messages also get lost no matter what they tell you. I've written about this problem numerous times and each time I mention it some jerk writes in and tells me he's been a computer user for two whole years and the Internet is the greatest thing in the world and it couldn't possibly lose a message because a friend told him so. Then a professor writes me and tells me I'm full of crap and that the Internet doesn't lose a message, but the site might have a problem. Duh, ok! The fact is the message got lost! So back to bandwidth. If you haven't noticed the Internet craze really got into gear once Clinton and Gore began to blather on about the digital highway. Next thing you know the Internet IS the digital highway. The first thing you learn in Political Science 1 at the University is that an unlisted power of the President is to set the moral tone for the nation. A side dish to this moral-tone setting is that if the President reads a certain author (remember Reagan and Louis L'Amour?) or eats a certain jelly bean or has an odd cat or a funky dog or

whatever, then the public goes gah-gah over that "object." With Clinton-Gore the digital highway is the thing that caught the public's imagination. Voila! The Internet grows like topsey.

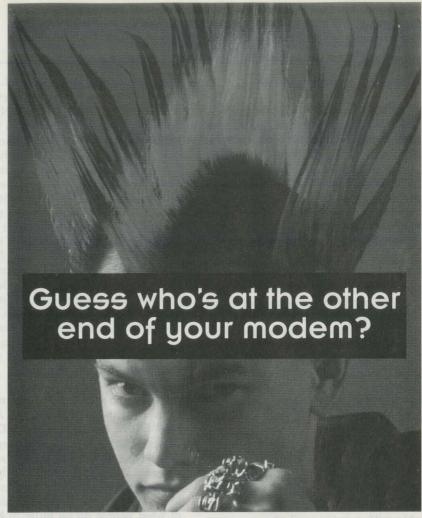

I suppose it's time to get to the point of this ramble. We know that Clinton has triggered this new boom in personal computer use while the old-timers have found comfy niches. We assume (and I think with some justification) that the Internet would not have rocketed without all this digital highway nonsense. And, finally, the Internet, it's safe to assume, is going to run out of bandwidth any minute.

Now what exactly is missing from this picture? This out-of- control mess is viewed by us all as some weird curiosity. We stand around watching it. We might watch the whole country go to on-line hell. It's hard to say. Much of the BBS community already feels out of touch. Many on-line users are turning into voyeurs or becoming dissociated from their on-line life. Split personalities.

All the while everyone is in a daze and we ignore the already designed data superhighway called ISDN. A preoccupation with the Internet has again let the dopey phone companies off the hook regarding full coast-tocoast implementation of ISDN. This technology should have been coast-tocoast five years ago. By now we should be implementing wide band ISDN. We can have data services and video service like nothing we can imagine. But where is it? The country is distracted by the fake superhighway buzz-term and now the Internet mania. Who cares? We need ISDN. If President Clinton or Al Gore would just publicly berate the phone companies and demand ISDN for the nation, we'd have it in a month.

Please cut this column out. Circle the last paragraph about ISDN and send it to your Congressman and Senators. The digital superhighway is here. It should be fully installed and the phone tariffs should not be changed. All we're doing is modernizing with ISDN so let's not muck with the rates. But let's get this system going.

As for the Internet we can call it over the ISDN line.

Games Plus
Your online universe—and a half

From chariots to chessboards, from dungeons to deep space, the hottest new games, always **free!***

- PLUS multiple players, role playing, interactive—it's all here!
- PLUS unrestricted downloading at fast 14.4 Kbps!

* Never any charge to use the service: you pay only your normal cost for the phone call.

RUMORS AND FACTOIDS

he response to the introduction of V.FC as a real product has been pretty exciting. Zoom is shipping a 24 kbps modem NOW that is available on the shelf in some stores for less than \$200. Boca Research has announced a \$395 24 kbps V.FC model. Practical Peripherals and GVC have products in beta testing. The V.32terbo camp has pretty much folded. U.S. Robotics and **ZyXEL**, both proponents of V.32terbo, have essentially bowed to the inevitable and announced intentions to support the V.FC mode. What is most dramatic is the response of AT&T. The two main developers of modem silicon are Rockwell and AT&T. Rockwell actually does the V.FC chipsets while AT&T produces a modem chipset with the V.32terbo technology. Rumor has it that the modem manufacturing arm in AT&T, AT&T Paradyne, is going to announce support for V.FC as well. The question is, using who's chipset?

U.S. Robotics apparently took the Hayes move as a wake up call. The company had virtually become unreachable with a voice mail phone system from hell, incredible delay times in shipment of modems to BBS operators, and a generally "we're very busy, and VERY successful" attitude. They have done pretty well recently with sales of their Sportster model in retail stores at very attractive prices. But within days of the Hayes announcement, the company lowered prices on modems, announced support for V.FC class, and actually launched a market survey program to call OUT to BBS system operators to ask them what they thought of U.S. Robotics, and what they thought U.S. Robotics could do to improve that perception. Don't count this company out yet. Their relationship with BBS operators is a long one, and whatever internal problems they may have had recently, it would be very unlikely they would give up this very visible market segment without a fight.

Increasing rumors of trouble on the Internet. The problem is a continuing confusion between connectivity and capacity. Several host providers are struggling heroically to continue services in the face of rising demand.

Some aren't doing so well. Colorado Supernet became virtually unreachable during October/November, shut off USENET news to UUCP accounts for several weeks, and has been taking a lot of heat lately from their client base. Many hosts have been throwing hardware at the problem in a scramble to stay ahead of demand. And some sites are simply closing. Our story last month about FTP apparently detonated on impact with decwrl closing their e-mail ftp service - we don't if this is permanent or temporary. Some anecdotal evidence is mounting to support the claim that Internet mail sometimes get lost somewhere, somehow, someway. In any event, evidence is mounting that the Internet enjoys no mystical immunity to the problems of growth.

The online community continues to gain in the mainstream. ABC's PRIMETIME LIVE program on December 8th featured a healthy segment about electronic bulletin boards. The story was actually pretty artfully done - avoiding the easy shot at sex online in favor of a fairly in depth examination of what people do on bulletin boards and why they do it. Featured was Wayne Gregori's SFNET in San Francisco, Dan Linton's Software Creations BBS, and Michael Allen's Odyssey BBS, as well as America Online.

Meanwhile, the BBS arena has also attracted the attention of the financial community. Investment bankers Cruttenden & Company have contacted most of the BBS software vendors about the possibility of handling an Initial Public Offering (IPO) to go public while venture capitalists seem to be popping up everywhere - down to smallish bulletin boards. All signs of the emerging industry in PC communications software and services.

What U.S. company sports the highest number of millionaire employees? You guessed it. Microsoft. Over 2000 Microsoft employees are technically millionaires, primarily based on their holdings of company stock.

MCCAW COMMUNICATIONS FIRST TO OFFER CELLULAR PACKET DATA

became the first cellular telephone company to introduce Cellular Digital Packet Data (CDPD), in Las Vegas Nevada in November. CDPD provides a 19,200 bit per second data connection over cellular channels using the "dead space" between voice cellular operations. McCaw's AirData CDPD service will also see light in Dallas, Miami, New York, San Francisco, and Seattle before the end of January.

More than a dozen other cellular carriers have announced varying levels of support for the cellular packet service and it is estimated that 74% of the population will be within reach of CDPD by the end of 1994 - a fairly rapid deployment. Talk of a CDPD "Internet" is already under way.

The initial introduction is primarily aimed at corporate use - American Airlines SABRE Technology Group is an early customer. But unlike existing wireless data services such as RAM Mobile Data, Inc. and ARDIS Company, McCaw claims they will avoid per packet charges and most likely charge a flat monthly rate to consumers in the \$34 to \$45 range. Other carriers have expressed interest in air-time charges like regular voice cellular service, although probably at a lower per minute rate.

Security of wireless data transmissions is an issue. McCaw is deploying a kind of public-key encryption technology on the RF portion of the transmission. It will be transparent to the user but requires that the CDPD radio modem include public-key software. Encryption/decryption of packets will in the data routers on the carrier end, and inside the modem on the user end. This will ostensibly make wireless data actually more secure than land line systems.

McCaw also indicated that the 19.2 kbps rate may not be the ceiling, noting that 64 kbps data rates are within technical feasibility.

Motorola Inc. makes most of the carrier's base station equipment for the network, also plans to introduce CDPD radio modems. A working specification for CDPD devices was finalized in August 1993. A combination cellular voice phone and CDPD modem is currently under test and scheduled for introduction early this year. Later plans include a PCMCIA Type II card modem that would plug into any laptop with a PCMCIA II slot. IBM and Cirrus Logic are also reported to be working on CDPD modems.

We think CDPD will ultimately offer the widest coverage at the least price for wireless data communications, and expect it to handle an increasing amount of the data traffic in the future.

eSOFT ANNOUNCES HIGH SPEED SUPPORT FOR HAYES 28,800 V.FC MODEMS

eavailable a free update to its TBBS bulletin board system software to support Hayes' new V.FC based Optima 288 modem product. The update, which adds support for 57,600 bps and 115,200 bps interface rates, allows TBBS based bulletin boards to provide the high data transfer rates possible with the new modems.

"TBBS is the only product in existence which can run up to 64 of these modems on a single computer," said Phil Becker, eSoft's president. "Not UNIX, not OS/2, not any other BBS product can support more than a few of these modems on a single machine without serious performance reduction. TBBS can support up to 64 of them, all with less than 10% degradation in performance, and all on a single DOS-based PC."

eSoft worked closely with Hayes, who uses TBBS for their customer support and demonstration BBS (1-800-US HAYES or (404)HIMODEM), on testing the new modems. "The transfer rates possible with the new Hayes Optima 288 modems are incredible - as much as double the throughput possible with previous modems," said Becker.

eSoft is the oldest producer of commercial BBS software, introduced 12

years ago on the TRS-80 computer. Its current TBBS product runs up to 64 high speed lines on a single DOS-based PC without the need for LANs or multitaskers. eSoft currently claims 25% of the BBS software market. The update to support the Hayes Optima 288 is available to registered users via the eSoft product support BBS at (303)699-8222. eSoft, Inc., 15,200 E. Girard Ave., Suite 3000, Aurora, CO 80014; (303)699-6565 voice.

EVENT HORIZONS AND ADVANCED SYSTEMS RESEARCH MERGER

fter several months of negotiation following a meeting at ONE BBSCON '93, Event Horizons and Advanced Systems Research, Inc. have announced the merger of their two companies, and the move of ASR to Event Horizon's Lake Oswego, Oregon office site.

Event Horizons is a 64-line bulletin board system specializing in graphic images, and most widely known as the target of a copyright infringement lawsuit several years ago by Playboy Magazine. Headed by Jim Maxey, the system may be the single most profitable PC-based BBS in the country with estimated annual revenues of some \$3.2 million. Event Horizons first went online in 1983 with a focus on space and astronomy images.

Advanced Systems Research, headed by Alan Mcnamee, previously located in Reno, Nevada, operated a 48 line BBS primarily devoted to software product development, support, and beta test for third party utilities for eSoft's TBBS bulletin board software.

As part of the change, ASR is moving to the same office building in downtown Lake Oswego. The combined forces of the two companies brings the in-house staff to 21, with an additional stable of 22 programmers located around the country who contribute to the software product line. This may well comprise the largest BBS third party software development house in the world. Both ASR and Event Horizon can be reached at 311 Avenue B, Lake Oswego, OR 97034. The bulletin boards will remain separate with ASR's contact phones as (503)699-8227 voice; (503)699-8229

fax; (503)699-8200 BBS. Event Horizons BBS remains available at (503)697-5100 and 800 GO MODEM as well as on the CompuServe X.25 network with host name EVENT.

PCMCIA MODEM PRICES DROP

A flurry of new product announcements and price cuts for the PCMCIA style modems happened toward the end of the '93 year, making PCMCIA modems a more attractive option for laptop toting road warriors.

The Personal Computer Mermory Card International Association (PCM-CIA) bus standard has caught on in a pretty big way - particularly among laptop computers. These slots allow the addition of memory, ethernet connectors, modems, or other peripherals built in a tiny credit card size package that plugs into the slot via a 68-pin connector. The market for PCMCIA fax/data modems is expected to grow to nearly 3.4 million units by 1995. The initial pricing of 14.4kbps modems for the slots was not encouraging however with most models appearing in the \$600 to \$700 range.

But that appears to be changing. Supra Corporation has announced the SupraCOMcard 144, a combination 14.4 kbps modem and fax card at a more inspiring price of \$349. Based on the Rockwell 144ACL chipset, the new modem is designed for use in Type II and Type III PCMCIA slots and features a five year warranty. Supra Corporation, 7101 Supra Drive SW, Albany, OR 97321; (503)967-2400 voice; (503)967-2401 fax; (503)967-2444 BBS.

Boca Research has also announced a new 14.4 kbps PCMCIA modem titled the M144PA at \$369. It is quite similar to the Supra offering with both data and fax at 14.4 kbps, compatibility with all of the by now familiar flurry of standards, and can send and receive fax or data calls. The company has also announced a PCM-CIA form 10BASE-T ethernet adapter allowing users to connect their laptops to a 10BASE-T ethernet LAN. 10BASE-T is a twisted pair wiring standard that uses modular RJ-45 telephone jacks to make connections rather than the more common ethernet coaxial cable with BNC connectors. Titled the BEN1PA, the credit card sized adapter features the expected RJ-45 connector, a five year warranty, and a \$229 price tag. It comes with a whole raft of software drivers fro Novell Netware, Microsoft LAN Manager, Windows for Workgroups, as well as most other popular NDIS applications. Boca Research recently acquired the assets and operations of The Complete PC. Boca Research, Inc., 6413 Congress Ave., Boca Raton, FL 33487; (407)997-6227 voice; (407)997-0918 fax.

Practical Peripherals has an existing product, the PractiCARD 144 PCM-CIA modem, and announced in December a 22% price cut from \$449 to \$349. While the Supra and Boca products claim a port speed between the computer and modem of 57,600 bps, the PractiCARD claimes speeds of up to 115,200 bps, and draws less than 20 milliwatts of laptop battery power in its software controlled "sleep" mode. Practical Peripherals, 375 Conejo Ridge, Thousand Oaks, CA 91361; (805)497-4774 voice; (805)374-7272 fax; (805)496-4445 BBS.

Finally, Hayes Microcomputer Products, Inc., announced a \$100 price decrease in their Hayes Smartmodem OPTIMA 14400 FAX144 for PCMCIA bringing it to \$399. The OPTIMA model weighs just 2.5 ounces and also plugs into a Type II PCMCIA slot. The Hayes model is somewhat unusual in that it also supports synchronous communications using their AutoSync software. This allows users to also connect to mini- and mainframe computers through 3270 and 5250 remote terminal emulation from a notebook computer. Hayes Microcomputer Products, Inc., P.O. Box 105203, Atlanta, GA 30348; (404)840-9200 voice; (404)441-1213 fax; (404)HIMODEM BBS.

U.S. ROBOTICS ANNOUNCES SUPPORT FOR V.FC

T.S. Robotics, Inc., announced an agreement with Rockwell International Corporation to incorporate Rockwell's V.Fast Class (V.FC) technology in selected U.S. Robotics products.

The company had offered the V.32terbo technology for 19.2 kbps connections as an interim technology until

Box 195123

Winter Springs, FL 32719

Outside U.S. - (407) 695-4447

the International Telecommunications Union (ITU) formalized the V.34 standard. But the wave of V.FC announcements in November proved compelling, and USR acknowledged they would incorporate V.FC in some models of their modem product line.

"It is important to help our customers increase throughput and maintain compatibility as the final pieces of the ITU-T V.34 standard are put in place," sand Jonathan Zakin, U.S. Robotics executive vice president of sales and marketing. "Our customers rely on products that provide the widest range of connectivity options and highest speeds available. Our support of non-ITU-T technologies such as V.FC assures that our products meet these needs."

Still hoping to salvage something from the V.32terbo/V.FC fray, U.S. Robotics has been quick to point out that V.34 is coming. Dick Brandt, Chairman, Working Party 1 of Study Group 14 of ITU is quoted as saying the final draft of the standard will be submitted in February, and formal adoption is expected in June of 1994. The standard has jokingly been referred to on the committee as V.last, acknowledging the limitations of analog telephone bandwidth. But suggestions of a V.34bis standard taking modem speeds to 32 kbps or even higher have already been discussed loosely.

U.S. Robotics also announced record sales and earnings for the quarter ended October 31, 1993 with revenues of \$69.4 million, an impressive 123% over the \$31.1 million for the same quarter of the previous year. Earnings for the guarter increased 81% to \$5.5 million. The dramatic jump was attributed to strong sales of the Sportster line in the retail channel and substantial gains in Wide Area Network systems products. Earnings per share for the quarter were \$0.44 compared to \$0.28 for the same quarter of the previous year. Annual revenues were \$189.2 million, up 68% over the 1992 figure of \$112.4 million. Net income climbed 57% to \$17 million. The company currently has 12,143,000 shares outstanding trading on NASDAQ under the symbol USRX.

COMPUSERVE - GRAPHICS IN THE SHOPPING AREA AND A LOT OF NEWS ONLINE

ompuServe announced with some fanfare the introduction of graphics in their shopping mall area. The service claims to be the first online service to offer high resolution graphics as a complement to home shopping product descriptions, an intriguing, if dubious claim.

The program basically allows merchants to include images in CompuServe's Graphics Interchange Format (.GIF) that depict products offered for sale. The .GIF image can be displayed online if your terminal program supports display of downloaded .GIF images (Qmodem and Procomm do) and works very well with CompuServe's own Information Manager for Windows.

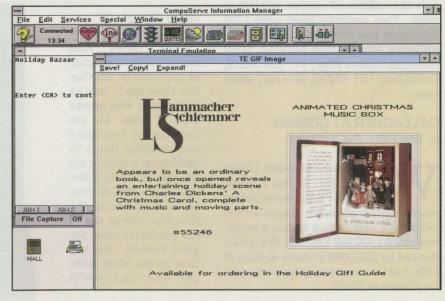

The service claims over a third of the merchants have chosen to take advantage of the new feature, but we found a scant handful, and some specific merchants such as Buick and Sears were announced but simply didn't have any images online.

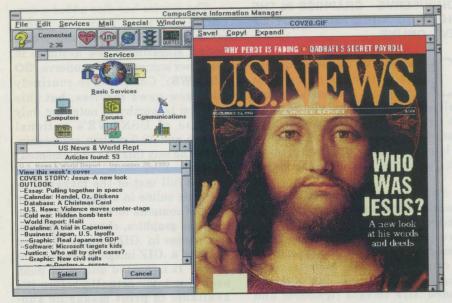

But while the percentage of products offered with graphics in the mall is currently very small, the concept has a lot of merit. For callers, it is quite easy to use, and it does very much alter the shopping mood when you can actually view the product. The images are actually pretty clear, and even at 9600 bps, the images rarely take more than 30 seconds or so to download. The overall effect is powerful.

The service has also added a couple of new news features. Most notably, the U.S. News and World Report Magazine is now available in the News section of CompuServe (GO USNEWS). CompuServe routinely adds new news services, but this addition is worthy of note, not only because of USN&WR's national stature and 12.5 million readership, but in the way this was implemented.

The full text of the magazine is available online in a very easy to use table of contents format. But it also includes graphics, charts, diagrams, and photos in .GIF format. It even includes a .GIF image of the current cover. It is posted online at noon each Sunday - actually before it's available to print magazine subscribers or on the newsstand. It's included as part of CompuServe's BASIC service at no additional charge to callers. Forums are included where callers can discuss stories not only with each other, but with the magazine's editors and writers. A file area includes expanded information such as government speeches and reports covered in the issue, contact information for organizations cited in articles, the annual American's Best Colleges guide, the Money Guide, the Guide to Best Mutual Funds, and other popular USN&WR annual features. And finally, a searchable database of more than 12,000 USN&WR articles dating back to 1986. And of course, you can enter a subscription online.

In short, this is the first example we've seen of a national printed magazine actually EFFECTIVELY putting

their product online in a way that takes advantage of the medium to any significant degree. And from what we saw, they really did do it right.

But further, we were struck by how the USN&WR addition dressed up CompuServe. Text online is too often a wasteland of just simply bad writing. We found USN&WR a very good online read, probably partly due to the kind of short, punchy articles that make up most of the magazine in print form, and partly due to just good editorial matter. We think this will be one of the first really big successes in the marriage of printed magazines to the online medium, and the harbinger of more to come. US News readers can obtain free software to access the service by calling 1-800-510-4247.

CompuServe is currently claiming some 1.5 million subscribers and projects the addition of another 400,000 in 1994. They currently sport some 1700 databases and services online. CompuServe Information Service, 5000 Arlington Centre Blvd., PO Box 20212, Columbus, OH 43220; (614)457-8600 voice

GALLAGHER AT COMDEX

by Craig Menefee

ant to make a blue-suit IBMer throw a fit? If you're Gallagher, the hammer-wielding manic sultan of melon-mania entertainer, it's easy — just smash a watermelon. At COMDEX. In the aisle, flanked by \$250,000 or more in state of IBM's art computer equipment, with no plexiglass shield.

It was one of the high moments at COMDEX '93. IBM had engaged Gallagher to do five shows per day at their booth at a cost reportedly in excess of \$150,000. Aware of the splat-ability of Gallagher's kitchenware antics, they provided a clear plexiglass "cage" to take the brunt of the liquid punishment that's an inevitability at a Gallagher performance, but the crowd started egging the performer to come out of his glass house . . . so he did. The blue suits had red faces and their roars of rage briefly drowned out Gallagher's patented, rapid-fire one-liner delivery.

You might say they were a mite upset.

No damage was reported, so the entertainment of watching a seasoned performer get IBM's goat was well worth it.

Who's Gallagher?

those who For haven't seen Gallagher at one time or another (are there any?), he's an entertainer who breaks a lot of rules. He got famous for breaking and pounding things to smithereens during his act. He sells two-dollar plastic ponchos to people who will be in the first five rows at one of his performances, for good reason. Sit too close to the stage without one, and you'll probably leave with stains of watermelons, peaches, exploding water balloons, and whatever else came to Gallagher's mind during the performance. He's been known to hose down the audience with a fire hose. And hecklers are grist for his good-humored mill.

Each performance is different; once he gets going, he's a one-man theme park. If IBM didn't want something nutty, they should have engaged Andy Williams, not Gallagher.

IBM hasn't announced whether it will hire Gallagher again, but it's not likely to bother the performer much one way or the other. IBM may have hired him, but it's the audience he was playing to, and the audience wanted him out where a hammered watermelon would distribute itself as God intended, all over the audience, the aisle, the blue suits — and the equipment.

Gallagher also has some of the best one liners in the business. If your knees bent the other way, what would chairs look like? Why do Kamikaze pilots wear helmets? (All the people that would complain about that joke are dead, he remarks.) Why would you put a wet drainy thing like your nose upside down over your mouth?

He finds humor in everything — our language, our bodies, the way we do things. Why do men have nipples and no breasts? Why do some hitchhikers wear camouflaged clothing?

Gallagher's also famous for his props, which include giant trampoline

America Online and CompuServe are not really glasses, they're online information services.

couches and invisible diving elephants. But it's his take off on the Veg-o-matic food processor, in which he uses a sledgehammer on watermelons and anything else at hand, that has earned him his cult following.

No wonder he has a cult — anyone who can make a pie in the face seem like transcendent humor deserves such a following. If he were a religious nut, no doubt he'd be dangerous. But he's caught on in the mainstream, too. His shows now average 2,000 rain coat clad fans who gladly pay \$20 or so to see him work. And work he does. According to Ruth Ann Proper, who has been working with him over a decade, "Gallagher puts everything he has into each of his shows." During a two hour interview in Las Vegas, Gallagher told me performing just happens to be his "latest job" and that he is nothing more than a "hard worker." Considering what he does during his performances and the involved preparation process it takes to pull each one off, his modest term "hard worker" is most definitely an understatement. His 20 minute Sledge-o-matic routine alone would exhaust a decathlon athlete.

Gallagher is recognized everywhere he goes. When out walking, fans often tell him his shows are great. People crowd around and tell him bad jokes, and he smiles, or retorts with some great lines of his own. Other times he's quiet, but all the while he's listening, and thinking, and courteous to his fans.

Until IBM puts him behind a glass screen and the crowd dares him to come out. Then they're in for a quick drenching with fruit juice and watermelon innards, while the blue suites writhe and yowl. Now there's a show that was worth a stained shirt or two.

BOARDWATCH 100 READERS' CHOICE BBS CONTEST 1994

he Boardwatch 100 Reader's Choice BBS contest has become something of an institution each winter when BBS callers all over the country fax or mail in their ballots nominating their favorite BBS for inclusion in a list of 100 BBS's that garner the most votes. This year, the contest will run from January 1, 1994 through June 30, 1994. Winners will be announced at the Online Networking Exposition and

BBS Convention (ONE BBSCON) held in Atlanta, Georgia, August 17-21, 1994. The Boardwatch 100 list will be published in subsequent issues of Boardwatch Magazine and distributed in electronic form world-wide. Last year's Boardwatch 100 BBS list has been widely disseminated electronically, and published in several books.

PRIZES FOR BULLETIN BOARD OPERATORS

ST PRIZE: The BBS system receiving the largest number of valid ballots will be named the most popular BBS and will be presented with an award trophy at the ONE BBSCON held in Atlanta Georgia, August 17-21, 1994. Additionally, the winning BBS will receive air fare, hotel accommodations and registration at ONE BBSCON for the primary BBS operator as the guest of Boardwatch Magazine. Additionally, the system will be featured in a story in Boardwatch Magazine and a free full-page color advertisement in Boardwatch Magazine for a period of three months.

TOP TEN: The ten most popular bulletin boards selected by the voters will each receive an award trophy at the ONE BBSCON, a story describing their system in Boardwatch Magazine, inclusion in a special top ten BBS listing in the magazine, and a free quarter-page black and white advertisement in three successive issues. Additionally, they will be listed in the Boardwatch 100 BBS list. System operators from the top 10 who attend ONE BBSCON will receive an award trophy in a special awards session.

TOP ONE HUNDRED: The 100 bulletin boards receiving the most votes will each be listed in the Boardwatch 100 readers choice BBS list. This list will be published in Boardwatch Magazine and freely distributed electronically on thousands of bulletin boards worldwide.

IN CASE OF TIE. Positions for which an identical number of votes are received will be determined by point value established by the date stamp assigned to each received ballot. Time/Date stamp values are accumulated for all votes and a cumulative score assigned to each BBS based on date of receipt of ballots. Votes receive a date stamp value between 1 and 180 based on the day of the contest the vote is

received. System with lowest (earliest) cumulative date stamp score will prevail in event of tie.

PRIZES FOR VOTERS

all valid ballots submitted by voters will be entered in a random sweepstakes drawing. As of the opening date of this contest, prizes include two Hayes OPTIMA 288 V.FX + FAX modems, two U.S. Robotics modems, and two ZyXEL modems. A minimum of six valid ballots will be selected from all entries and each will receive a free modem - from the most popular modem manufacturers in the world.

RULES FOR CALLERS

ach voter can vote once, for a single bulletin board system. Each ballot must be fully completed, and individually mailed by each voter. We will verify ballots as necessary. There are three ways to vote:

- 1. Complete this ballot and mail to: BOARDWATCH MAGAZINE, READERS CHOICE BBS CONTEST, 8500 West Bowles Ave. Suite 210, Littleton, CO 80123.
- Complete this ballot and FAX to (303)933-0876.
- 3. Or, dial the Boardwatch BBS at (303)973-4222 and complete the online ballot provided on the main menu.

Balloting closes at 23:59:59 on June 30, 1994

This contest is not limited to Boardwatch Magazine subscribers, and no purchase of anything is required to participate in this contest. Reasonable facsimiles of this ballot are acceptable, so long as all specified information is included.

We held this contest during 1993 and it generated over 20,200 votes by the close of balloting for some 1,775 different bulletin boards. The TOP system received 1,330 votes. Your individual vote can have a tremendous impact on the outcome of this contest. Further, the odds of winning a modem in last years contest were roughly 1 in 3,340. You won't get those odds in the lottery.

Inside

SuproFAXModem 1200 m 1

Inside or Out, now you can choose the hot-selling SupraFAXModem™, technology that best fits your BBS. Either way, Supra can turn your BBS into line conditions. And Adaptive Answer* recognizes whether an incoming call a communications powerhouse!

Supra's faxmodems offer top-of-the line functionality like 14,400 bps fax and data, compression (V.42bis & MNP 2-5), support for Class 1 & 2 fax commands, and compatibility with Group 3 fax machines.

But SupraFAXModems don't stop there. We've enhanced the standard Rockwell modern technology. The revolutionary status display on Supra's external modems makes it easy for you to monitor online activity. The SupraSmartTM UART on the internal V.32bis faxmodem significantly enhances the

potential for error-free transmissions

AVAILABLE NOW

Supra Corporation

Fall Back/Fall Forward technology lets the modem adjust to changing is fax or data.

> The Caller ID* option can allow positive identification of all callers without the normal tedious logon sequence. Prevent unauthorized entry due to lost or stolen accounts and passwords because the BBS can know exactly who's calling

And Supra offers qualified Sysops an "insider" price on both internal and external faxmodems. Choose the faxmodem that's right for you and call Supra's BBS

(503-967-2444) or 1-800-727-8772 today for

more information.

SupraFAXModem V.32bis internal with Caller ID	\$299.95	\$129.95	

NOW YOUR IMAGINATION ** CAN BE REALITY! __*

Imagine a continuous stream of new data flowing into your BBS non - stop 24 hours a day... *

Imagine having daily access to almost any conference network and Internet/Usenet news groups...

in Imagine your long distance phone bills dropping by as much as 80% or more.

With a Planet Connect satellite data system you can automatically and inexpensively receive an amazing amount of new data each day.

Monthly subscription rates for the conference nets are as low as \$30.00 . per month. The two foot satellite data system can be purchased for only \$495 or leased for only \$18.50 per month.

Our two foot diameter satellite dish system comes complete with cable and a video tape to assist your installation. The system is easy to install and requires almost no maintenance.

Break away from those high priced phone bills and increase your menu of data at the same time. Call today for a free video and site check kit. Call now, quantities are limited due to the high demand for this revolution in BBS communications.

MMB TEAMate UNIX® Bulletin Board Software

Is your group just standing around?

Meerkats instinctively
work together. People don't.
We can't guarantee your group
will cooperate as well as the
Meerkats but with MMB
TEAMate they will have
access to the information
they need, when they need
it, wherever they are.

Since 1985 we've
been building easy-to-use
multiuser communications software designed for
operating commercial
information utilities.
In fact, MMB
TEAMate is the only
bulletin board and electronic
publishing software with an integral text

manager, content retrieval, conferencing, custom forms, topic data structure and customizable GUI clients for all popular workstations.

Client/Server Design.

TEAMate's client/server design moves the user interface to the local workstation for increased performance. GUI

established standards for
Windows 3.1, Macintosh
and UNIX workstations
makes it easy for your users
to get started fast.
Server software is
available for HP-UX,
IBM RS/6000, SUN and
SCO. All servers support terminal emulation
and client access via
modem and TCP/IP.

Put Your Company On line!

With MMB TEAMate

you can easily set up a cost effective communications system tailored to your exact requirements. Call us and we'll customize TEAMate for your application so you can try before you buy.

RULES FOR BBS OPERATORS

while the obvious winners in such a contest are the BBSs voted the most popular, The Boardwatch 100 Reader's Choice contest is designed for the callers. This is their chance to note what elements of a BBS are important to them, and to designate a BBS they think the world should know about. And they receive the hardware prizes.

But past contests have indicated that the winning bulletin boards do campaign a bit. Bulletin Board Operators may encourage callers to vote for their system by offering whatever inducements/encouragements they like. There is one rule to this contest for BBS operators. YOU MAY NOT HANDLE ANY VOTE AFTER THE CALLER HAS COMPLETED THE BALLOT. YOU MAY NOT HANDLE IT IN ANY WAY.

BBS operators may provide callers with anything they like, including postage paid envelopes, printed matter, solicitations, Jaguar convertibles, etc. But once they have completed a ballot, if they touch, handle, or otherwise deal with the ballot in any way, their BBS will be disqualified from the contest without appeal or recourse.

This is because we have developed adequate mechanisms to determine the validity of votes received - and they have proven effective. But if we allow BBSs to collect ballots, we have no mechanism for determining ballots that "got lost" and were never passed on to Boardwatch Magazine.

This contest is open to all bulletin boards worldwide with the sole exception of the Boardwatch Magazine BBS - which is ineligible. Commercial services such as Prodigy, America Online, CompuServe, are considered to be networks and not bulletin boards for the purposes of this contest. HOWEVER, individual forums, roundtables, or special interest areas moderated by a specific human SYSOP on those services and allowing callers to post messages in that specific area ARE considered to be bulletin boards for the purposes of this contest and may participate.

FREQUENTLY ASKED QUESTIONS FROM LAST YEAR'S CONTEST

Q. Can I vote for my own BBS.

A. Yes. If you don't think your BBS is the best in North America, it's unlikely anyone else will. You may vote for your own BBS, and encourage others to do likewise.

Q. Can I vote more than once?

A. No.

Q. Can I change my vote?

A. No. Once a vote is received, it is added to a database and tallied. There is no mechanism for altering votes. If we receive more than one vote from a single person, BOTH votes are disqualified and removed without notification. If more than one vote is received from the same address, we may contact the voters to ensure both votes are from different callers.

Q. Can I post an electronic survey form on my BBS and allow my callers to vote electronically online?

A. No. Electronic balloting is provided only on the Boardwatch BBS, primarily in response to past requests from vision impaired/disabled callers. BBS operators participating in the contest may not handle the ballot in any way, electroni-

cally or otherwise, after it is completed by the caller.

Q. Can I collect votes from my callers and mail them in for them.

A. No.

Q. Can I collect votes from my callers and fax them in for them?

A. No.

Q. Can I print up special ballots, and mail them to my callers with postage prepaid envelopes?

A. Yes. The ballot must include ALL information and questions from the ballot printed in Boardwatch Magazine and the ballot provided to callers must not be pre-completed. It must be a truly blank ballot allowing them to vote for whatever BBS they wish to vote for. But broadly, you can provide anything you like TO the voters.

Q. Can I obtain a list of those voting for my BBS?

A. No. Voter data is used for vote verification and statistical analysis only. We cannot provide voter lists to anyone.

Readers' Choice BBS Contest

Boardwatch Magazine is sponsoring the Third Annual Readers' Choice BBS Contest to find the 100 most popular bulletin board systems in North America - and the ONE BBS most popular among callers. The contest will run from January 1, 1994 through June 30, 1994. Winners will be announced at the **Online Networking Exposition and BBS Convention** (ONE BBSCON) held in Atlanta, Georgia, August 17-21, 1994. The Boardwatch 100 list will be published in subsequent issues of Boardwatch Magazine and distributed in electronic form world-wide.

PRIZES FOR VOTERS

All valid ballots submitted by voters will be entered in a random sweep-stakes drawing. As of the opening date of this contest, prizes include five U.S. Robotics Courier Top of the line Modems, five Hayes OPTIMA 288 V.FC + FAX modems, and five ZyXEL Top of the line modems - and more are on the way. A minimum of 15 valid ballots will be selected from all entries and each will receive a free modem - from the most popular modem manufacturers in the world.

RULES FOR CALLERS

Each voter can vote once, for a single bulletin board system. Each ballot must be **fully completed**, and individually mailed by each voter. We will verify ballots as necessary. There are three ways to vote:

- 1. Complete this ballot and mail to: BOARDWATCH MAGAZINE, READERS' CHOICE BBS CONTEST, 8500 W Bowles Ave, Suite 210, Littleton, CO 80123.
- 2. Complete this ballot and FAX to (303)933-0876.
- 3. Or, dial the Boardwatch BBS at (303)973-4222 and complete the online ballot provided on the main menu.

Balloting closes at 23:59:59 on June 30, 1994.

This contest is not limited to Boardwatch Magazine subscribers, and no purchase is required to participate in this contest. Reasonable facsimiles of this ballot are acceptable, so long as all specified information is included.

Planet Systems Inc. Headquarters, Newport, Tennessee

PLANET CONNECT SATELLITE SYSTEM - FIDONET/USENET MAIL FIREHOSE FROM THE SKY

by Tracy Mickley

sers are going to love it, the phone company is going to hate it and sysops think it's the hottest thing in Modemland. Using satellite technology, Planet Connect has managed to bring down the cost of being a Fidonet sysop to fraction of what it was. Imagine getting the entire Fidonet backbone feed, plus most of the Fidonet File Distribution Net(FDN) for thirty dollars a month. You also get Rosenet, CRS net, Intellec net, Rime net, daily radar weather maps and TV listings. Select Usenet newsgroup feeds are being sent now as a test and PC will begin sending the entire Usenet newsgroup feed New Years day.

The entire setup is amazingly simple. The system consists of a C band or KU band satellite dish, a Planet Connect receiver, a null modem cable, and the Planet Connect software on a dedicated computer. With that you get a 19.2K baud feed of approximately 15 to 20 megs a day. Planet Connect offers you a complete system, C or KU band,

or the parts needed to use your own dish.

There are two major satellite frequency bands, C and KU. Basically, the larger the dish, the stronger and more reliable the signal you have to work with. C band dishes are usually 6 to 10 feet in diameter depending on where you fall in the satellites footprint. A sysop might be able to get by with a 6' C band dish in Tennessee. A sysop in Canada will probably need a 10' dish. A KU band dish is much smaller physically due to the higher KU band frequency and stronger satellite signal. A huge KU dish is 4'. Planet Connect offers both a 2' and 3' dish but recommends the 3' dish for stronger reception and less rain fade influence.

Choosing KU or C band

There are advantages and drawbacks to both bands. The KU band dish is much smaller in size, somewhat cheaper and easier to install. There is a wall mount unit that can be used for a vertical wall, an inclined roof or a traditional pole mount. You can also get a non-penetrating floor mount for a flat roof or concrete pad mounting. The advantage

to the floor mount is that it can be placed on a flat roof and secured using concrete blocks for ballast to avoid puncturing the roof membrane. The drawback to KU band is that it is susceptible to rain fade data errors. If the rain is a frog strangler you may lose some data. If you lose one block of a file transfer, you lose the entire file since the satellite is downlink only. You don't have an error correcting protocol that can simply retransmit the bad block as a modem connection would. This isn't as bad as it sounds. Planet Connect retransmits everything currently 3 to 5 times a day. If you miss one file due to extremely heavy rain, chances are you'll get it the next time around. If the worst should happen and you can't get any one of the duplicate transmissions, you can call their bbs and download the files you need directly.

The C band dish is big and requires a traditional pole mount. The Planet Connect C band dish is 7 1/2' and it is slightly more expensive than the KU band. You may need a larger dish if you are Canada or the southern tip of Florida. Installation difficulty also goes up due to the size of the dish. To give you an idea, I mounted a 3' KU dish on

my back yard fence in about an hour. Another sysop told me he spent the better part of a day just to pour his concrete pole mount pad and set a pole for his C band dish. Another drawback to C band is they are affected by microwave transmissions. The Telcos (and others) have line of sight direct beam microwave transmission towers scattered around the country. These create 1/2 mile wide microwave alleys that crisscross the country side and urban areas. If you happen to be in one of the 1/2 mile wide strips you have to some how block the microwave signal from interfering with your dish. A building will do. Chances are slim you'll be impacted, but you may want to check with a local satellite dealer first. C band is not affected by rain fade.

Can I get TV too?

Tes and no. It will take additional equipment for video reception and a signal splitter. The KU band feed uses the Galaxy 4 satellite and you won't find much of anything in the way of TV to bother with other than the occasional wild feed (early transmission of network shows) and some academic conferences from universities around the country. The C band bird, Galaxy 3, on the other hand, has a full range of video signal you can pick up. Planet Connect does not sell any of the additional equipment you need to pick up video. Your local satellite dealer can help you out here also. Orbit magazine will show you what you can expect from either feed if video reception is part of your purchase decision.

Locating the dish

fter deciding which dish you want, you have to figure out where it will be placed. PC will provide you with a kit that includes software, a water pail compass (a magnetized nail on a piece of foam), an inclometer and a video. You will need to get your latitude, longitude and magnetic deviation from the local airport or a map. You enter these into the PC Satellite Finder software program and you then have the angle and direction the dish needs to point. With that information in hand, you trample about your back yard with the provided inclometer and water pail compass to find an unobstructed view for the dish, hoping your neighbors aren't looking out their kitchen window.

Installation of the dish

f there is any area that really needs improvement, major improvement, it's in the actual installation procedure. At present there is no written installation procedures. PC does provide an installation video that accompanies the system demonstrating the dish tuning procedure. The video mentions nothing about assembly or mounting of the dish. The dish assembly and mounting instructions are a simple CAD drawing of the dish and mounting assembly hardware. A call to Planet Connect confirmed that it was a problem they were working on improving it but they've been too busy filling orders to come up with better installation documentation. A color crayon sketch would be improvement. If you aren't mechanically inclined, get some one to help you. I'm not that mechanical, but I do know the difference between the pointy end and the blunt end of a screwdriver and did manage to install the dish myself. My kit was missing the female coax cable connectors and the null modem serial cable. A rummage through my spare parts box got me past that. Tuning the dish requires you to point it in the general vicinity of the satellite and then listen for a variable pitch tone while moving it around to find the exact angle and direction. When the tone peaks, you are tuned in. I was able to lock into a strong signal in just 10 minutes.

Installing the software

'nstalling the software is a 15 minute job. There is no printed documentation so you are stuck with READ.ME files and a lot of guestions. Ignore your nagging questions, do a little editing to a couple configuration files as instructed in the documentation, meager as it is, and the software is up and running. The software requires a dongle key that attaches to your printer port. You get 30 days to sign the contract and get the paperwork out of the way for your subscription or the dongle expires and your feed disappears. To renew your subscription, call Planet Connect while at your computer and enter the renewal code provided by a serial number/date algorithm. This will update the dongle to the new expiration date. You have the option of monthly, quarterly or annual subscriptions. The monthly rate is \$40/month, quarterly is \$35/month and annual rate is \$30/month. There is an additional \$10 fee per month if you pass a feed to any other systems.

Up and running...almost

nce your satellite is up and running, the real fun starts. Your mailer software will need to be configured to handle an AKA of 1:3615/51 and mail bundles in PKzip

The KU Band Kit with 3' dish

The IDC Satellite Reciever

2.04g format. Outbound reply mail must be sent to 3615/50 which is Planet Connects own bbs using dBridge. PC currently has 2 inbound land lines and 1 ISDN line. They indicate they will add more incoming lines as demand increases. The first fresh feed of the day starts at 7:30AM Eastern time and takes approximately 3 hours. Fidonet Files come in using 0000FFFF.MO1 naming convention averaging 500K per bundle. When all of the mail files arrive, PC sends a special trigger file that allows the software to exit with a DOS ERRORLEVEL for a DOS batch file to process what you have on disk. A PC supplied freeware utility, courtesy John Morano, moves the files to your specified areas for processing and deletes any subsequent incoming duplicates. Processing the inbound FDN files requires TICK or equivalent also using the 3615/51 AKA. Plan on a couple hours setting up the 170+ directories and TIC config file for the inbound files if you insist on keeping them separate by category. I wrote a little throw away utility to handle all that just to save some typing but there was still plenty of editing to do between my areas.bbs and tick files. You should note that not every FDN has agreed to participate in the PC downlink, notably the Genealogy FDN, but that position has been reconsidered after several sysop's complained loudly and it now appears to be poised for placement on the bird as are a few other holdouts. Most FDN's are there and you will be hard pressed to determine which are missing.

Hardware ... Caveat Emptor

ost sysops report they are able to multitask the current software successfully. If you do plan on multitasking, you will need to assign high priority to the PC soft-

ware's DOS partition or have some fast iron, or both, to avoid data over run errors. The latest version of the PC software does have integrated 16550 UART support. A welcome relief to most sysop's from previous versions that did not support the FIFO buffer

in the 16550 chip. There have also been isolated problems reported with heavy LAN access during reception that causes receive errors. I hammered my PC machine with my Lantastic to try and force an error and I couldn't get it to even burp. The new 16550 support should eliminate most of these isolated problems that have been reported. The printer port dongle creates its own problems too, minor as they are. Your printer must be powered on while plugged in the back of the dongle or you must remove the printer entirely. PC's voice technical support has been good

and there is a support echo (PLANET_CON-NECT) active with helpful participants and monitored by PC. Tech support hours are noon to 10pm daily and noon to 6pm weekends. My last call at 10:30pm their time found tech support still open for business. The extended hours are a breath of fresh air for a SYSOP.

Newsgroups from the Internet

he mantra of most every SYSOP in the last year has been connecting to the Internet and picking up newsgroups. The reality hits home when they are faced with access charges and phone bills that dwarf Fidonet feeds. Despite that, bbs's have been linking to Internet faster than the commercial services

can handle the load. PC will take some of the load off the commercial Internet services by providing a full Usenet Newsgroup feed starting January 1. PC is currently sending the alt.bbs.* newsgroups as a beta test. The newsgroup files come compressed with PKzip and unpack to *.BAG files which is the same format as the PageSat system sends for their newsgroup feed. Using PIMP for TBBS, I simply move the *.BAG files to the appropriate directory and PIMP does the rest. Many sysop's are are using Fredgate or Waffle to handle posting the newsgroups.

You will need to set up an account with an Internet link that will handle a one way uplink for replies or posts to any of the newsgroups. Planet Connect does not handle the replies or posts to newsgroups as they do with the Fidonet feed. A quick call to my Internet link, Holonet, confirmed it was no problem to send newsgroup postings to them for upstream only.

Electronic TV Listings

P^C also sends files containing complete cable TV listings daily. These files are well over 100K in

Tracy Mickley with his home installation

size and contain the complete daily program schedule for most every cable TV company in the US. They also provide a reader program that takes the raw data and gives it a front end with search and display abilities to show only the cable listings in your area. The PC SYSOP gets the reader for no charge. BBS users will pay Planet Connect \$24.95 for the reader software and then pick up the daily listings from your board. PC is planning on providing sysop's with a conversion program to process the listing file down to only those cable systems in their local area for much shorter daily downloading times. When I talked to Planet Connect at ONEBB-SCON, they said they were looking into daily stock quotations eventually coming down the bird. They haven't mentioned it since but demonstrating what they can do with the TV listings, stock quotations seem to be a natural.

Should I or shouldn't I?

espite the flaws of poor documentation and some difficulty in multitasking, the system works beautifully. You'll find yourself just watching the screen tick off incoming blocks or glancing at the dish in the back yard and grinning. You simply can't beat the economics of the satellite feed and many nets are discussing cost sharing plans to purchase one dish to provide a cheap feed for everyone in their net. At this price for what you get, you'll want to have one of your own. This technology is going to revolutionize the Fido net and Usenet newsgroups bringing thousands of message areas on-line to systems that couldn't afford the phone bill or access charges in the past. I expect message traffic is going to increase to the point where individual sysops or nets will be forced to get the system or cut back on some message areas to handle the telephone bill. My telephone bill dropped \$130 for the first partial month on the bird and once the full Usenet newsgroups hit the air it will drop quite a bit more. The best part of the whole system is the number of message areas I'm able to provide my users for a great deal less expense than I ever thought possible. This simply is a must have system, warts and all.

Planet Systems, Inc, 213 Abbey Road, Newport, Tennessee 37821; 615-623-9335 voice; 615-625-8831 FAX; 615623-8111 modem.

2' KU dish kit \$495.00

3' KU dish kit \$549.00

The KU kit includes 100' cable, wall or roof mount. 1 KU LNB and feed. 1 Planet Connect receiver (19.2K) and null modem serial cable.

7 1/2' C band dish kit \$649.00

The C kit includes 1 7 1/2' dish with pipe mount. 100' cable. 1 C-band feedhorn, 1 C-band 30 degree LNB, 1 hand crank for positioning. 1 Planet Connect receiver (19.2K) and null modem serial cable. \$30 shipping and handling for each system.

Tracy Mickley is the SYSOP of Flat-Land BBS (701-239-6048). He is a long time TBBS sysop, third party software author for TBBS and a co-author of the book, TBBS: Tips, Traps and Techniques to be released in January. He can be reached at Fido node 288/6 or Internet email tmickley@flatland.com

America's Premier 900-Billing Service

Free Sign-up • Free Software

Hassle-Free Billing—TABS eliminates all of the work associated with billing and collecting. Users call your BBS prepaid and TABS sends you one large check each month. Easy for you. Easy for your customers.

How TABS Works

- As a sysop and a TABS client, you will receive TABS software and a unique set of subscription IDs—all free of charge.
- Your users can then pay for your BBS by retrieving one of these IDs with a quick, one-minute call to our 900-number for which they are billed \$10.
- They submit this ID to you as "proof of payment." TABS software will validate the ID and upgrade their access.
- You provide them with \$10 worth of access to your BBS in any amount you wish.
- You receive a monthly check for all the IDs redeemed for your system. True Media withholds 25% and the rest is sent to you.

Information: (800) 755-8227 Technical Support: (407) 722-3150

Access to Government

WHOSE LAWS ARE THEY, ANYWAY?

by Jim Warren

degree, is defined by its laws, as interpreted by its courts and implemented by its governments. Increasingly, full rights of citizenship and robust protection of personal freedom requires that we, as individuals, have practical access to the law.

Poli Sci 101

"The law" — as most people think of it — falls into three basic categories:

- 1. Constitutions and statutes, which are created by legislative bodies.
- 2. "Case law," which are judicial rulings interpretations by judges of the meaning(s) of constitutions and statutes as applied to specific civil or criminal cases brought before a court by private-party legal action or by civil or criminal governmental prosecution.
- 3. Administrative regulations, which are policies of agencies, usually in the executive branch of government. These are supposed to detail the implementation of constitutional, statutory and case law.

Nomenclature: Just to confuse matters, both legislated statutes and administrative regulations are sometimes called, "codes" — even though they are vastly different in their authority. Furthermore, rules enacted by federal Congress or state legislatures are usually called "statutes," while rules enacted by local legislative bodies — such as city or town councils, county Boards of Supervisors or boards of directors of special districts (e.g. water, sewer, parks and harbor districts) are usually called "ordinances."

Valuable Laws

In practice, access to statutes is of limited value without access to their interpretations by the courts — rulings that gain importance as they are issued initially by a trial court, then reviewed by an appellate court (when a trial-court decision is appealed), and especially if interpreted by a state supreme court or the federal U.S. Supreme Court.

There are separate, parallel, similar court systems for each state, and they are separate from the federal court system. All court rulings are useful in varying degrees, even between states.

Legislation vs. Law

My last several columns focused on computer-based citizen access to legislation-in-progress — laws in their prenatal stage — timely access in useful form, allowing us the *practical* opportunity to participate in our own governance.

Those columns also addressed citizen access to computerized statutes bills that ran the tortuous legislative or congressional gauntlet and were enacted into state or federal law. (Computerized statutes aren't that massive. The federal statutes are available from the Government Printing Office on a single CD ROM for \$30. California's Constitution and state statutes, for instance, compose about 125-million characters - free, online, as of January, 1994; previously sold on magtape for over \$200,000 per copy.)

But statutes are often vague or ambiguous — often due to inadequate insight into their ramifications; sometimes due to sloppy drafting by legislators and their staff; and, sometimes from lack of backbone on the part of legislators unwilling to clearly define their intent in controversial legislation. (A significant percentage of the time and expense spent on new legislation is drafting corrections to errors and oversights in old legislation.)

This column concerns modern [computer-assisted] public/citizen access to case law — which, in many ways, is more important than statutory law.

Computerized Case Law

Case law begins when someone initiates an court action (civil or criminal) — almost always required to be adversarial where one or both parties accuse and threaten the other.

Next, there is a discovery process whereby each side uses rules of court procedure to demand information from the other side — primarily by inquiry and sworn depositions — usually drafted on a computer system.

If the sides don't settle their feud, then they go to trial, wherein each adversary pleads their case via written briefs and verbal testimony. The briefs are usually prepared on a computer. The testimony is transcribed by a court reporter, usually on a computer.

The judge or multi-judge appellate court issues a ruling or rulings — the decision(s) of the court — usually prepared on a computer.

In the case of multi-judge courts, individual justices may issue separate statements ("opinions") stating the rationale for their positions — also prepared on a computer.

Thus, almost all information pertaining to case law of the past decade or more exists in computer form. Most of the information is filed with and archived by the courts — as public records — in paper form.

The CALR Caste System

In the last decade-plus, private and government civil and criminal attorneys have increasingly used CALR — computer-assisted legal research — to search case law for rulings pertinent to their cases, and research crucial to competent legal representation.

And, more and more computer-literate citizens are using computerized legal information — when they can afford access to it.

Clients and attorneys who can't afford CALR have become second-class citizens. Their legal rights and representation are severely limited by tedious, costly, increasingly-inadequate manual searches through law books, obsolete by the time they were bound in platinum-priced paper tomes.

At the bottom of justice's caste system are the mere citizens who have inadequate financial resources — when their adversary is the government or a wealthy individual or corporation.

Government attorneys in fundscrunched local agencies and, to some extent state agencies, are higher up the caste system. They can afford *some* access to CALR.

Near the top of the caste system is the federal Department of Justice (DoJ). It has considerably-more financial resources for CALR — though of course, always limited, and always paid by tax-payers.

At the top of this Caste System of "Justice" are the wealthy individuals and corporations — with unilateral discretion to spend as much as they choose on legal attacks or defense.

Efficient — i.e. computer-assisted — access to complete and current legal information (statutes, pleadings, rulings and administrative policies) is the Great Equalizer for the 20th Century's gun-slingers and their clients in the modern OK Corral, the courts.

Citizens without CALR had best bow their heads and politely grovel — a most un-American posture.

Citizens Could Have Equal Access

In the '70s and early '80s, the DoJ owned and operated a CALR system called **Juris** for use by DoJ attorneys.

Most importantly, Juris contained federal case law, computerized at great tax-payer expense. Juris also contained administrative law, treaties, regulatory policies, etc. — valuable information sometimes not computerized any place else.

The Clinton-Gore administration has sought to open computerized federal public records to public access. That could potentially give citizens and their attorneys equal access to a crucial legal resource — computerized case-law.

Forget it!

DoJ Screwed Tax-Payers and

The home-grown Juris system was reportedly funky and infuriating for the DoJ attorneys wanting to use CALR in preparing their federal cases.

Pressured by information-industry lobbyists in 1983, the Reagan administration contracted with West Publishing, a major law-book publisher, to gather and computerize federal judicial opinions — which they already did for their publishing operation and Westlaw online system — and provide CALR services to DoJ.

DoJ apparently quit computerizing federal rulings.

But, during the decade that DoJ paid massive tax loot to West for computerized federal case law, it permitted West to "own" the computerized copies it provided!

Furthermore, for many years, federal courts have required that attorneys use the page numbers in West's published federal rulings when citing federal case law in legal briefs.

West Springs Their Trap

A few months ago, West declined to renew their DoJ contract. And, oh by the way, their page numbers — the federal courts' required, standard references — are copyrighted and may not be used in any paper or computerized law database or publication without West's permission.

If our tax-funded federal government wants computerized access to federal court rulings for the past decade, it can pay more tax loot to re-computerize them — *IF* DoJ can retrieve them from all of their original sources.

But the federal court's required reference numbers can't be included. Wanna cite federal case law in federal-court briefs? Pay West — through the nose.

Were are the computer pirates when we really need 'em?

Congress Cops Out

House Resolution 4426 (H.R.4426) would have declared that page-numbers on judicial decisions were not protected by copyright. But the House Judiciary Committee killed it.

The Administrative Office of the U.S. Courts proposed to establish a non-proprietary system of citations and pagination. But the Judicial Conference killed it.

"Justice"— American-style.

If you care about equal access to justice, or even about this waste of your taxes, then flame your Congress Creatures — your so-called representatives — and your region's federal Circuit Court Justices for allowing this to continue.

Details of this Juris/DoJ debacle came from reports by James Love, Director of the Taxpayer Assets Project. This is one of the best public-interest organizations fighting in Washington DC for equal and public access to our computerized public information — invaluable taxpayers' assets. For more information, updates and specifics of how you can help, contact him at 202-387-8030 or via Internet email to love@essential.org. (TAP is a Ralph Nadar group.)

Better Hopes for State Access

As the legal system grinds to a halt under the load of paper blizzards, courts are looking at requiring that briefs and motions be filed with the court in machine-readable form — more compact, easier to index, search, cross-reference and extract. (Pity the future judge who remains computer-phobic. Much worse — pity their appellants.)

As branches of the federal government and of various states seek to improve their government, they often look — for better or worse — at what California is doing. In 1990, Chief Justice Malcolm M. Lucas of the California [State] Supreme Court initiated a project, "2020 Vision: A Plan for the Future of California's Courts." To pursue this vision and planning project, he formed the Commission on the Future of the California Courts, chaired by Dr. Robert Dockson, former Dean of the University of Southern California Graduate School of Business.

The Commission created a Technology Committee chaired by Associate Justice George Nicholson of the 3rd District [California State] Court of Appeals (Sacramento CA) — who appears to be an enthusiastic supporter of applying computer roto-rooters to the paper-clogged plumbing of the legal system.

At press deadline, I was told the Commission expects to issue its comprehensive report and recommendations around January 20th. Watch this column for details of California's recommendations for modernizing the court system — likely-useful guidelines for preparing any state's judicial system for the 21st Century.

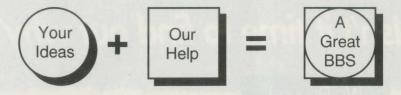

Jim Warren 345 Swett Rd., Woodside CA 94062; (415)851-7075; Internet:jwarren@well.sf.ca.us has been a computer writer, lecturer and organizer for more than 20 years.

He founded InfoWorld, the Computers, Freedom & Privacy conferences, the huge Computer Faires of the "70s, was founding host of PBS' "Computer Chronicles" and founding Editor of Dr. Dobb's Journal.

He began working as a minicomputer programmer in 1968, holds three graduate degrees and has taught computing at Stanford and other universities.

BBS Consultants

Creating Online Solutions Since 1983!

For ten years, we've been helping organizations large and small to make their ideas become realities using Bulletin Board System technology. From selling BBS Software and Hardware at competitive prices, to developing turn-key applications for customers, we can help you solve your communications problems.

The INDEX System™

A million people every day use WILDCAT! BBS.

Isn't it time to find out why?

WE DELIVER!

We didn't become Number 1 by accident.

Some of our competitors take five, six, even fifteen versions to get it right. And still fall short of the mark in features, performance, and value.

At Mustang Software, Inc., we don't expect our customers to live on promises. We deliver. Real features. Not just copycat

add-ons and bundled 3rd party solutions.

Features like internal Zmodem and Kermit. Industry standard QWKcompatible offline messaging and echomail utilities. Fast query-byexample message and file searching, and one-touch file tagging. Real LAN and Digiboard support.

And RIPscrip graphics. Full mouse support for the remote user, from every menu prompt including text and dynamic menus. Eye-popping graphics, macros, stacked commands, slide shows . . . total flexibility.

Great Options

At MSI, our motto is "Connecting the world in '94". To help you do that, we offer a growing list of quality options.

wcFAX turns your BBS and Fax modem into a Fax-ondemand system. Part of our wcPRO sysop utility package, which also includes LAN node management and sophisticated database manipulation and reporting tools.

wcUUCP is our newest addition to the suite of power utilities for Wildcat! sysops. Send and receive Internet e-mail and newsgroups. Éverything you need is included — no thirdparty add-ons to hunt down, no complicated front end mailers or mail tossers to buy.

wcMHS adds LAN e-mail connectivity through Novell's Message Handling Service. Redirect Wildcat! messages to any other MHS compatible application, even link Wildcat! BBSs together, echoing messages via MHS direct or through the CompuServe MHS Store and Forward Hub.

Availability

Wildcat! BBS was the first commercial BBS program to be offered by normal wholesale and retail distributors, and GSA suppliers, at competitive pricing. Why pay full list price direct from the vendor, or from a limited number of "authorized dealers"? You can be on the air for as little as \$99 "street price". Chances are, your favorite local software store or mail

order outlet has Wildcat! BBS ready for you to take home.

It's so easy to be a Wildcat! BBS reseller, too. Why not make Wildcat! part of your everyday product line? Call us for reseller information.

"Imagine having a business with over 2.5 million customers. That's what we had to face at the Connecticut Tax Department when a new personal income tax was enacted. How best to get information out? We thought a BBS would be a good idea. After checking several, we found WILDCAT! to be -

gram thoughtfully supported!" A.J. Janschewitz Connecticut Department of Revenue Services

dare I say it — the least taxing.

Thanks, MSI, for an elegant pro-

Look at the numbers

22,000 BBS operators, and over a million callers a day, have all chosen the speed, power and flexibility of Wildcat! BBS.

That makes Wildcat! BBS the **Number One BBS software** package on the market today. And that's no accident.

Compare features. Compare support. Compare quality. Compare

availability. Compare value. And you'll see why Wildcat! BBS should be your first choice in BBS software.

What are you waiting for?

Got a question? Call us toll free at

MACINTOSH BBS NEWS

by Bill Gram-Reefer

UUCP GATEWAY FOR FIRSTCLASS

Information Access Technologies, Inc. the Berkeley, CA-based provider of HoloNet Internet service, has announced the release of its HoloGate:FirstClass/UUCP a gateway that allows administrators of FirstClass e-mail systems to connect to a UUCP provider to receive Internet e-mail and USENET news. The company announced plans to release similar gateways to support CE Software's QuickMail and Microsoft Mail.

Compatible with HoloUUCP, the FirstClass gateway provides an easyto-install connection to the Internet to provide e-mail connections for users and access to more than 5,000 unique newsgroups. Features of the Holo-Gate:FirstClass/UUCP Gateway include UUCP Protocols "g" & "G" supporting maximum packet and window size, and UUCP Protocols "i" & "j" that facilitate simultaneous, bidirectional signal transfer without file transfer start-up delays. USENET Newsgroups can accept and send news in unbatched, batched, and compressed formats, and provides for automatic conference threading. Mail Address aliasing is supported, as is the "E" command that can be used to reduce the number of files transferred. Enclosure Support is handled either by BIN-HEX or uuencoded-AppleSingle. A flexible scheduler allows administrators to specify calling times for transfers. Planned upgrades (free for six months)

will support MIME and allow priority scheduling of conference connections independent of e-mail connections. Pricing for a single system license is \$500. An upgrade that includes the "i" protocol costs an additional \$100. For more information contact IAT at 46 Shattuck Square, Ste 11, Berkeley, CA 94704-1152; (510) 704-0160 (voice); or support@holonet.net (e-mail).

NPTN TABS FC FOR RURAL FREE NETS

he National Public Telecomputing Network (NPTN), champion of free, community-based telecomputing, announced its plans to launch a grassroots rural Free-Net program using SoftArc's FirstClass communications software. NPTN, which positions itself as the telecomputing equivalent of public broadcasting, currently has a network of 22 free public nets in 22 cities with plans to bring another dozen online soon. The first Free-Net based on FirstClass, The Great Lakes Free-Net based in Calhoun, MI came online in November. It offers a graphical user interface to community services including government offices, courts, local libraries, the Red Cross, and other organizations.

The NPTN rural outreach program, to be launched in January 1994, will be based on Macintosh computers running FirstClass e-mail and conferencing software. Internet connectivity will be facilitated through periodic UUCP connections using SoftArc's UUCP Internet Gateway. Estimated institutional pricing for rural libraries, governments, and schools, including NPTN cybercasting services, hardware and software is not expected to exceed \$10,000 per net.

To be sold as a turnkey solution offered by NPTN, a specially configured edition of FirstClass will be offered to qualified recipients. That configuration includes a FirstClass Macintosh Server, support for 5,000 telecom users and 2 regular users, Windows and Command Line Interfaces, 20 modem port software licensing and serial-port expansion hardware, and the UUCP Gateway. For more information on how to register as a Free-Net, contact The National Public Telecomputing Network at Box 1987, Cleveland, OH 44106; (216) 247-5800 (voice); tmg@nptn.org (e-mail).

HERMES II NOW SHIPPING

since acquiring the venerable Hermes Macintosh BBS program last Spring, new owner Lloyd Woodall of Computer Classifieds has developed a major upgrade package. Programmer Robert Rebbun has added over 70 new features and enhancements to this widely used program that now supports color ANSI graphic menus in addition to ASCII menus.

Other new and improved features include form letters, support for Caller ID, embedded variables in BBS text, network capability, all new setup menus, security and access control menus, and the ability to run hundreds of external applications available from the company's support BBS. External applications available include: product ordering modules, games, and on-line chatting, to name a few.

Hermes II supports the use of multi-port serial devices and allows for a combined total of 10 modems, AppleTalk, and local nodes on a single Mac. Distributed as keyware through the support BBS, callers can download and operate a fully functional copy of Hermes II for 30 days. Registration for continued use is still only \$95. Hermes II, on-line support, modems, hardware and cards are also available from Computer Classifieds, 12819 SE 38th #101, Bellevue, WA 98006; (206) 643-2316 (voice); (206) 643-2874 support BBS.

TWO NEW SUPER BOOKS

Stop the presses. Literally. Two new authoritative tomes covering Macintosh BBSing and Internet surfing are now on the shelves in well-stocked bookstores everywhere. Together they provide so much information that you'll not need to read or refer to anything else for quite some time. Meaning—publishers can chill the Internet titles for awhile so we have time to digest the wealth of material found in these two most excellent resource guides. Really, you'll want both!

Adam C. Engst, publisher of the online TidBITS, has authored the Internet Starter Kit for Macintosh (KIT). The KIT includes 640 pages, and a disk crammed with everything you need to get started. KIT is softbound, published by Hayden Books, and costs a reasonable (considering the

value) \$29.95. More recent is Bernard Aboba's The Online User's Encyclopedia: Bulletin Boards and Beyond (BEYOND), 800+ pages and published by Addison-Wesley.

The important differences between the two works be found in KIT focusing on using your Mac to get around the Internet, while BEYOND casts its net more broadly in covering bulletin boards, networks such as FidoNet, providing samplers of various BBS software and boards, explaining the vagaries of point software and readers, in addition to providing some carefully weighed product purchasing recommendations and darn-good oral history as told by many behind-the-scenes leaders of telecomputing. BEYOND also offers a special registration form, available by e-mail, that you can use to get special offers and updates (aboba@world.std.com, subject: form). The author is also sponsoring a \$250 prize for the best filter program (same address, subject: contest).

Both guides provide more than adequate explanations of the Internet, where it came from, where it's headed, and the who, what, and how to use it. Both offer impressive indexes, glossaries, and appendices that include listings of newsgroups, in fact, nearly half of KIT contains nothing but listings of Internet resources.

The key to KIT however rests in its jump-start mentality of helping the reader get hotwired into the Internet the minute you put down the book by providing a diskette filled with all of the necessary software you need, plus a special offer to get your Internet SLIP account setup through Northwest Nexus, a commercial Internet provider based in Bellevue, WA. The account offers two free weeks of usage and costs \$20 for registration, then \$22.50 per month billed to your credit card in advance each month for as many hours of connect time as you want. One ittybitty problem is you have to call the Pacific Northwest to log on. In any case, make sure you get a SLIP/PPP account that can use the software. The diskette includes current versions of Eudora (mail), Fetch (file retriever), InterSLIP (connect tool), MacTCP (from Apple), StuffIt Expander (Compactor), and TurboGopher (browser). What more could you ask for besides a year off to read these two wonderful guides and become a guru yourself?

MORE MAC BOARDS

Tou'll enjoy taking a look at The Rest of Us (TROU), a FirstClass BBS operated by the Chicago Area Macintosh Users Group. Administrators Michael Zastrow et al have put together a nifty board that impresses from the start. First, on the user disk I received, there was a selfrunning, two minute HyperCard demo of how to setup the software and log onto the system using FirstClass; cool. Such attention to detail and helping people use the system is an innovative touch that should be commended and widely copied by all sysops. That was only the start, as the logon, augmented with sound, reveals a colorful screen with push buttons that transports you to the different areas on the board: mail, group business, SIGs and Files, want ads, gateways to networked OneNet conferences, and more information about the System. The graphical main screen of each of these sections is well thought-out and makes great use of custom icons. You can see the care and work that the group has put into running a colorful, easy-toget-around system. But can it hit to

The group business section included a newsletter, appeals for volunteers for special projects, and a calendar. The local SIGs showed some promise with Chicago Talk, Children and the Mac, Entrepreneur Talk, and other areas including discussions of recycling and photography. OneNet conferences for environment, investors, graphics, modems, hardware, and PowerBook help fill in the gaps. Alongside these usual suspects, TROU carries some offthe-beaten-track OneNet conferences including Tobacco News (anti-smoking BBS), journalism, consumer action, mind puzzle, and Bike Shop. The files available for download include wellstocked Speech Manager and Sound sections. You'll also find folders dedicated to education, database, law, photo imaging, and images and icons, in addition to the regular fare. You get a nice "Program Complete" Trek sound after a successful download, too. The board also provides access to its own public domain files and frequently posts news about discounts members can enjoy. TROU is a good looking board with plenty to offer. TROU BBS (312) 871-4484 bbs.

While not as polished as TROU, Mac's Last Stand (STAND), the official BBS of the Apple Cider and Club Mac User Groups of Rochester, NY, makes up for its comparative graphical shortcomings by offering sheer volume. Actually, Peter Alves and company do make use of many custom icons and provide a lot of nice sounds in various folders. This helps put some zing into an otherwise ho-hum "desktop with icons" format.

But who calls a BBS just because it looks pretty, anyhow? You call a BBS to pig out on the software, right? Well if you have a hankering for that kind of hog heaven, then call STAND. Six Gigabytes, 85,000 files. This includes 13,000 EPS art clips, five CDs (BBS in a Box, Giga-Rom, two Educorp, and one for Windows). A Hurdler HQS quad port connects the four hi-speed lines to the 21-Mb Performa 600 equipped with a Daystar 50-Mhz accelerator and FPU.

Don't need any files? Then check out any of the 400 OneNet and FidoNet conferences on the STAND. Local Conferences included Online football and Rochester Talks. Other local conferences include areas for Windows and Apple II users, as well as folders for the two user groups who use the board for member communications. Not surprisingly, with Rochester, NY being the home of Walter Rauschenbusch, the famous 19thcentury proponent of the "social gospel" movement, the board contains its own local Christian conference. There are additional OneNet Christian conferences via Servant BBS. Not a few Bible files and study aids are available for download, too. Another section, "Your Conferences" provide boardless sysops an opportunity to manage their own sections of the STAND. Paul Froelich and Carl Smith, for example, bill their section as Paul and Carl Productions and administrate several conferences covering pets of the world(!), boating, music, television, sky diving and, talks. The "talks" folder's subtitle was "arguments" but was empty. I wonder if they mean the "no they're not'...'yes they are'" variety of argument? Why not add an Abuse section ala the Monty Python skit where a vacuous, coffee-nosed, malodorous pervert of an administrator can freely accuse users of being heaps of snotfaced, festering gobs of parrot droppings. Maybe not.

Ready to add a HoloGate FirstClass Gateway in mid-November, STAND should support Internet mail and newsgroups by the time you read this. Pricing for Internet access will be \$2 per hr. with a surcharge of \$1 per Mb of attached file enclosures. Membership costs \$29/yr. that includes free scanning and color banner services for members. Western NY's longest running Macintosh BBS, Mac's Last Stand is more than hanging in there. (716) 247-9056 bbs; (716) 247-7084 voice support.

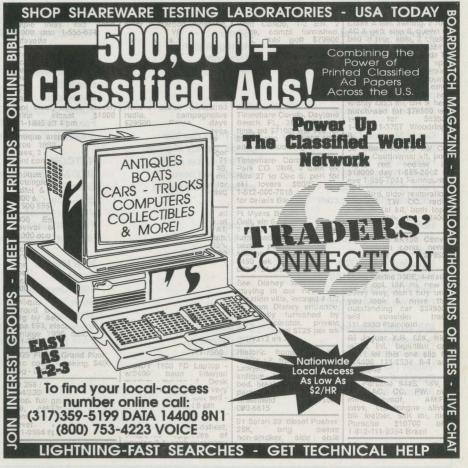

ATTENTION MAC SYSOPS

ets of the world? How about Mr. Ed! If you have a Macintosh-based BBS let us know who you are and what you think you're doing that makes your menagerie so special, even if it talks back to you. To make things easy, mail a diskette containing your user program with a preset account, time allotment and password to the address below so I can log on and take a look around your animal farm. Also include a text-file that describes your board and any bovine places on it you think are the cat's meow. I'll try to visit as many boards as possible and write about the most interesting ones I can find. MAC BBS, 2069 Highland Drive, Concord, CA 94520.

Bill Gram-Reefer, based in Concord, CA, is president of WORLDVIEW, specializing in connectivity and communications. Bill has been writing about Macintosh computers since 1984. E-mail Bill at: wk05156@worldlink.com

HoloNet Plugs You Into The Internet!

For The Individual: **HoloNet Provides FULL Internet Access**

- Internet e-mail
- USENET conferences
- FTP

- Internet Relay Chat (IRC)
- Archie & Gopher
- Telnet

HoloNet is a local call in over 850 cities nationwide. Modem to 1-800-NET-HOLO (8N1) to find the access number closest to you and HoloNet rates.

HoloNet membership is \$6.00 a month plus hourly connect charges, which can be as low as \$2.00 an hour! 1200-14400 bps modems supported.

Try HoloNet for yourself and find out what the Internet is all about. For a **free** demo modem to **510-704-1058** (**8N1**)

call 510-704-0160 (voice)

For more information on HoloNet send e-mail to info@holonet.net

For Your BBS:

HoloNet Provides Internet E-mail, USENET Conferences And A Custom Domain Name

For a one-time setup fee of \$75.00, you can add UUCP and domain name service (DNS) to your HoloNet account.

UUCP service gives your BBS users access to Internet e-mail and USENET conferences. UUCP service can be set-up as soon as the next business day!

Domain name service (DNS) gives your board a custom Internet address similar to "something.com". Domain names take up to 2 weeks to be registered.

An individual HoloNet account is required before adding UUCP and DNS service. All regular HoloNet rates apply.

Internet for: FirstClass, Major BBS, PC Board, Remote Access, RoboBoard, Searchlight, TBBS, Widlcat! and more!

HoloNet is a servicemark of Information Access Technologies, Inc. • 46 Shattuck Square, Suite 11 • Berkeley, CA 94704 • voice 510-704-0160 • © 1994 Information Access Technologies, Inc.

INTERNET NEWS

THE INTERPEDIA - MORE THAN JUST AN INTERNET ENCYCLOPEDIA

by Robert Neville and Douglas Wilson

"I hope that the Interpedia will become the Encyclopedia Galactica of my dreams."

Michael S. Hart, Director, Project Gutenberg, November 17, 1993

ho can deny that the Internet is hard to use? We have all gnashed our teeth, and most of us have gnashed them many times.

It's not only the unresponsive Telnet sites (... it says in the book that you can ...) or the dreaded trees of Gopher menus, or even the joys of UNIX. The real problem is much bigger. There's probably a terabyte of good stuff out here. Finding any particular piece of information can take a lifetime. Often seems that way anyway.

In late October a mailing list was established to discuss a suggestion of Rick Gates (he's the Internet Hunt guy) that an encyclopedia be established on the Internet.

But the idea rapidly exploded into something much bigger than some kind of Britannica on line. In a classic display of Internet synergy, participants soon realized that the idea of an encyclopedia could provide a solution to the terabyte-of-good-stuff problem.

The idea emerging is this: an Interpedia would be much more than just a set of references. It would ultimately organize all of the information on the Internet.

This Interpedia interface itself is the heart of the project: users requesting Interpedia items would receive information customized to their own preferences. Client software would accept the user's own statement of preferences, but would also collect data and make predictions on future user preferences. This feature would make the Intepedia a remarkable educational tool, allowing both young people and adults to specifythe level of material required.

Users would move from articles on topics, with alternative views just a keystroke away, to related newsgroups, to electronic meeting places, to pre-filtered library resources, and even to visual and aural examples.

Those familiar with Project Gutenberg will be interested to know that contact has already been established between these clearly complementary visions. Project Gutenberg has recently offered technical assistance and some resources to the new project.

It's a remarkable vision for those weary from the Internet trenches. And, of course, it's a big project. Things are moving very fast. Discussion on data collection and software design is going on now.

If you are interested you can contact the Interpedia mailing list at interpediarequest@telerama.lm.com (include word subscribe in message)

If you subscribe, you will receive a daily message digest which conveniently includes all the important Interpedia discussion of the previous day in a single post.

Those who like to follow newsgroups might want to check out news.groups for discussion of the proposed newsgroup **comp.infosystems.interpedia**. Voting on the formation of this group will take place during the month of January.

Who knows, maybe we'll learn to love that terabyte yet!

FX UUCICO - NEW DOS UUCICO PROGRAM AVAILABLE

ame system electronic mail doesn't actually originate on the Internet per se, but rather is connected to it at some point using the Unix to Unix Copy Program or UUCP. And increasingly, DOS based callers as well as bulletin boards, are using this UUCP connection to intermittently dial an Internet site for mail. UUCP is actually a set of programs on a UNIX system to perform this function. And the one program that actually does the dialing is titled the Unix to Unix Copy In Copy Out program or UUCICO.

In the DOS community, while there are an increasing number of programs to do mail in various ways, either from DOS or Windows, all seem to rely on a relative handful of UUCICO implementations for the DOS platform. By far the most popular is Thomas Dell's Waffle UUCICO. Waffle is actually a somewhat plain looking BBS software program with fairly powerful facilities for handling mail and USENET news groups. And it is available for both DOS and UNIX platforms with source code.

Mr. Dell developed the UUCICO program for Waffle from public domain sources, and in the spirit of the PD movement, allows the Waffle UUCICO to be freely distributed (not the entire Waffle BBS package, just the UUCICO.EXE and its documentation). As a result, by far the majority of DOS mail programs for the global Internet rely on this little program to actually dial the modem and deliver the mail.

But Jorge Cwik is developing a direct replacement for the Waffle UUCI-CO that we found fascinating largely in that it is half the size, twice the speed, and directly compatible with the Waffle version. Titled FX UUCICO, this program is currently being freely distributed as a Version 0.3 beta release in the file name FXUC03B.ZIP - released in August of 1993.

Cwik lives in Buenos Aires, Argentina and has been a freelance programmer for some time. He started writing programs on the Atari 800 and as a result, learned that size and speed do indeed count. Most of the Internet connections in Argentina are actually systems that dialup host sites in the United States to do UUCP mail exchanges. As a result, every second of connect time is very costly. So he tried to create a DOS UUCICO that would minimize this expensive connect time. (Have we heard this story before?) His FX UUCICO was written in Borland's Turbo C, but with a number of assembly language subroutines to reduce size and increase speed. The resulting program is very small, and very fast.

The attraction here is really that if you are using Waffle UUCICO, you don't have to do anything at all. You can copy the UUCICO.EXE from FX UUCICO over the top of your existing

UUCICO.EXE. No systems files, permits, dialers, or any other configuration files need to be changed at all. But the FX version supports up to 115 kbps port speeds, 16550 UARTS, and needs no external fossil program to do this. It fully supports variable block and windows sizes, and appears from our testing to do it quite flawlessly.

With the Waffle UUCICO.EXE version, we routinely acheived file transfer rates of between 800 and 1200 cps on uncompressed files over a 14,400 kbps V.32bis connection. With the FX version literally dropped into the same configuration and test platform, transferring the same files, we saw uncompressed files move as high as 3500 cps with our own PIMP program connected to the FX UUCICO - over twice as fast.

FXUC03B.ZIP is available for ftp from oak.oakland.edu, and halcyon.com and from many bulletin boards, including the Boardwatch BBS at (303)973-4222 in the Internet file area. Jorge reached Cwik can be jorge@laser.satlink.net. They also have an information server at fxdist@dogear.spk.wa.us. The program is currently "freely" distributed but described as neither shareware nor freeware. We're not sure what the future status of FX UUCICO will be, but it is a superb improvement over earlier UUCI-CO versions available for the DOS platform. According to Cwik, the UUCICO will probably remain freeware, and they plan release of a full UUCP package in the future. Jorge Cwik, Presidente PERON 1963 9E, 1040 Buenos Aires, Argentina; (54-1)953-2724 voice; Internet: jorge@satlink.net.

WILDUUCP - INTERNET GATEWAY FOR WILDCAT! BBS

s reported in a recent issue, Mustang Software Inc. had announced an optional package to connect Wildcat! bulletin boards to the Internet via a UUCP connection. Titled wcUUCP, the product was introduced in November, 1993 at an introductory price of \$99 - now \$299.

But one of Mustang's strongest third party software developers is Online Computer Resources, Inc. of Benicia, California. Most noted for their Wildmail utilities to connect Wildcat! bulletin boards to FidoNet, the company released a new product this past December titled WILDUUCP that performs the same UUCP gateway function, and very well may do a better job of it priced at \$139.

The program comes with its own install program that attempts to make sense of the "getting connected maze" and does a pretty good job of it. It does use the Waffle UUCICO to actually make the connection to the Internet host and pass mail. But the integration with Wildcatl's message is pretty thorough and the package offers some interesting features. Both private mail and USENET news groups are supported. It will automatically UUENCODE and UUDECODE large messages as file attachments.

An "AutoResponse" feature allows you to establish an address that anyone can send e-mail to and receive a reply containing any file you designate. In this way, you can set up an info-server to dispense product information for example. The program also supports a Return Receipt Request. While this requires both ends of a correspondence to be using WILDUUCP, it sends a return receipt message to the sender when the recipient receives their message.

WILDUUCP offers a couple of other advantages. It appears to process mail about twice as fast as wcUUCP, but it also can gateway USENET newsgroups or mail to FidoNet style .PKT packets - allowing the BBS to act as a gateway for other bulletin boards. It also has some capabilities to act as a mailing list server.

The program is actually available for download and evaluation from the Online Computer Resources BBS. It doesn't work, but you can download it. You have to call their BBS to get a dated keyfile that allows the product to work for 30 days from the creation of the keyfile. Then it expires and doesn't again anymore. If you pay the \$139 fee, you get a permanent key file. This is an innovative way to allow prospective buyers to look over the wares, but is a tad too cute for our tastes. It's software, and it's \$139. Online Computer Resources, Inc., 2036 Columbus Parkway #405, Benicia, CA 94510; (707)552-1122 voice; (707)552-0602 BBS.

MOSAIC AND THE WORLD WIDE WEB

he Holy Grail of Internetdom appears to be the Universal-Easy-Interface-to-Access-Everything-Everywhere-All-The-Time-Particularly-Right-Now. Not a clock tick passes without some University sophomore somewhere, in a flash of heavenly inspiration, deciding that the Internet is harder to use than it could be. Generally, the envisioned solution is so grand, that nothing ever actually gets coded. But hope springs eternal.

One of the better efforts is the World Wide Web and some affiliated software programs that allow you to click your way around a world full of information, photos, video clips, and hypertext we found a little awe inspiring.

The World Wide Web, which you may also see referred to as WWW or W3, was developed in Geneva Switzerland at the CERN research center as part of an effort to allow resident physicists to share the results of their work in a kind of electronic peer review/publishing process. The work was started in 1989 by computer specialist Tim Berners-Lee.

WWW is based on the model of Hypertext. Hypertext has generally been much touted, and little used in the computing community, but it does have some allure. It is text that is heavily cross-referenced or "linked" allowing you to read an article, and jump to a related topic in encyclopedic fashion. WWW is a global hypertext system allowing links not only between different documents, but different documents on different systems, and indeed different documents on different systems on different continents. The links can further be made to newsgroups, telnet services, gophers, archie and other Internet resources. And finally, the links or documents don't have to be textual at all, they can as easily be to a digitized image, audio sound file, or video clip.

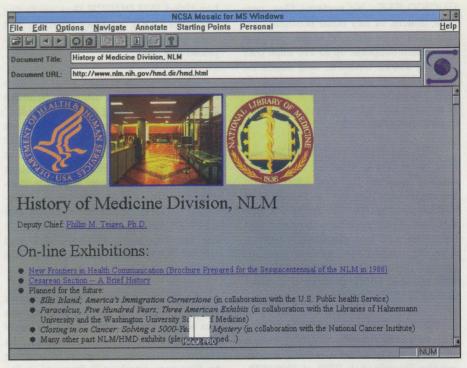

The basic hypertext text file navigation can actually be done by telnet and there are several sites you can telnet into to browse about the web:

info.cern.ch fatty.law.cornell.edu ukanaix.cc.ukans.edu www.njit.edu info.funet.fi There are also some further resources about the web itself including the USENET newsgroup comp.infosystems.www and the mailing list at: www-announce@info.cern.ch.

As it is from a plain VT-100 terminal using these public links into the web, the network of information you can wander around in is reasonably impressive. But the real impact doesn't come home until you've used a more visual navigation aid. A smallish group of software developers at the National Center for Supercomputer Applications at the University of Illinois at Urbana-Champaign has taken it as a mission to develop an interface for this World Wide Web. Under the direction of Marc Andreessen, they've done well enough to garner financial support from the National Science Foundation to try to further the work.

The result is a software program titled Mosaic. Mosaic is a graphic interface for the World Wide Web that not only makes navigating the Internet easy, but also supports the use of other programs to view digitized images, video clips, and listen to sound files. It is currently available in versions for X-Windows, the Macintosh, and recently for the Microsoft Windows platform.

The 1.0 version of Mosaic for Windows was written by Chris Wilson and Jon Mittelhauser and released this past November. You can get it from NCSA using ftp to ftp.ncsa.uiuc.edu. At the

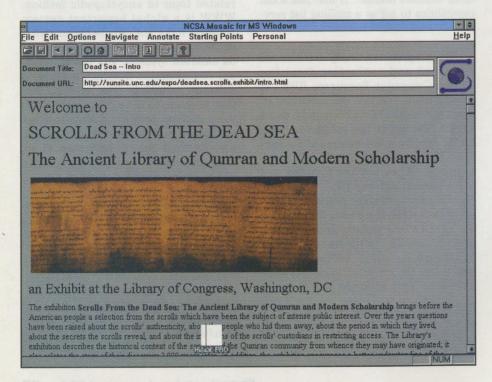

login prompt enter anonymous and at the Password: prompt enter your mailing address. At the command prompt, enter cd /Mosaic/Windows. The file you want is WMOS1_0.ZIP. There are some subdirectories listing viewers (LVIEW31.ZIP) and a sound player (WHAM131.ZIP) that you will also need.

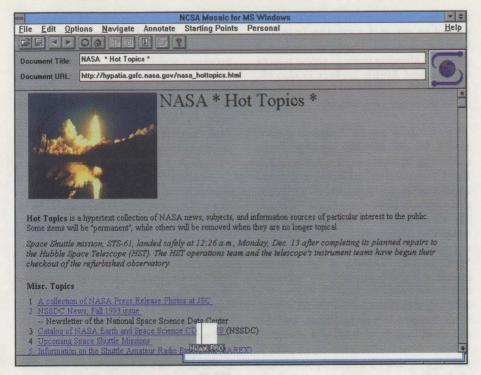

Mosaic installs in Windows reasonably easily. There is a **mosaic.ini** file where you can specify the external programs. Mosaic itself does nothing to give your PC a TCP/IP capability. It

assumes you are already connected to the Internet using some TCP/IP package or another. It is compliant with the WinSock 1.1 standard for Windows programs. Winsock is a Windows Data Link Library (DLL) (winsock.dll) that provides TCP/IP networking under Windows, along with a standardized "socket" interface that any application program can be written to connect to. The result is an agreed method of connecting application programs to TCP/IP.

At this point, most TCP/IP packages for Windows sport their own version of winsock.dll. There is a shareware version of winsock titled TRUMPET available. And a company titled NetManage offers a commercial product titled Chameleon TCP/IP for Windows at a handsome \$400 that allows you to connect to the Internet via a SLIP or PPP serial connection and provides a windsock interface for programs such as Mosaic.

Mosaic interfaces thru winsock.dll to communicate with World Wide Web sites. And it passes off any image file reading or sound file playing to these other shareware programs such as LVIEW.EXE or in some cases to existing Windows programs such as MPLAY-ER.EXE that comes with Windows. But the effect is a multimedia link to a worldwide database containing text, audio, video, and graphic images. And you can use your mouse to click your way around the planet. The overall effect is pretty stunning.

NCSA actually has a "demo page" on their system setup with links to an impressive number of world wide web sites. Simply click on this demo page from one of Mosaic's starting places and you will find a treasure chest of interesting hyperlinks. Any text in blue has a link and you can click on the text to actually connect to some other WWW site. We connected, for example, to the ExPASy Molecular Biology server and database in Geneva Switzerland and within seconds had located a fascinating graphic image of acetylcholinesterase, a chemical strongly associated with the research on Alzheimer's disease. We clicked our way to an information service on a Jamaican Bobsledding team, complete with photos of team members. We quickly located a NASA service with an incredible wealth of photos of shuttle launches, hubble telescopes, and so forth. A few more clicks and we were at a Library of Congress display covering Dead Sea Scrolls. And again, a National Library of Medicine site with information on ceaserian section, showing a historic wood cut of an early operation.

Mosaic was not flawless. We waited quite awhile for a half-megabyte video clip of the star ship Enterprise moving out of orbit. Somehow in the process of converting a very long UNIX filename to the very short 8.3 format allowed under DOS/Windows, Mosaic lost track of the truncated file name and couldn't display the clip. All too often, we were simply unable to connect to services for various reasons. And clearly all this

sound file, image file, video clip display causes a 14.4 kbps serial SLIP connection to the Internet to place a strain on even the most dull-witted attention span. This type of activity ultimately requires at least an ISDN like link, and better yet, the fiber glass to the home we have heard about for years.

But the software program and a SLIP link were enough to give us a glimpse of what the online world could easily look like in the future. It makes the term "multimedia" finally mean something to us. It is entirely conceivable to really picture a global distributed encyclopedia, with information being added and modified continuously at thousands or even millions of sites faster than anyone could ever actually click a mouse to get around in it. And yes, we got a little excited - all over again. It was well worth a few hours getting Chameleon installed, Mosaic installed, and a SLIP connection work-

For further info on Mosaic for Windows, you can also retrieve some post-script files on Mosaic from the /Mosaic/mosaic-papers directory of the NCSA system, or send e-mail to mosaic-win@ncsa.uiuc.edu.

Cable Data: The Shape of Things to Come

by Bernard Aboba

If you've ever thought "I'd like to put my BBS on the Internet, but I can't afford it," then this article is for you.

Through the combination of cable Internet connections and the BBSNet product from Murkworks, sysops will soon be able to offer their customers the ability to use FTP, Archie and Gopher servers at remote sites on the Internet, for as little as \$100/month. For reasons we shall shortly explain, it is much more expensive, though feasible, to allow people to telnet to your BBS from the Internet.

If this sounds too good to be true, hold on to your hats. Would you believe me if I told you that it will soon be possible to get a 10 Mbps connection to your desktop for less money than some of you are paying for phone bills today? That for approximately \$100/month you could connect your desktop computer to the Internet day and night, and download more in a second than you could in minutes with one of those fancy V.FC modems? That these type of connections would be available nationwide within the next year?

This is the promise of Cable data, which uses the cable TV connections to transmit digital data. Today the majority of cable operators offer some kind of data service, and several cable companies are planning to offer Cable Internet in the next year. Tests are currently being conducted in Cambridge, MA (TCI and PSI), and Minneapolis, MN (Continental Cablevision), and the service is now available in Cupertino, CA.

(Hybrid Networks). Hybrid is planning to expand service to the rest of the Bay Area in 1994, and will also be offering Internet connections to cable users in Washington, DC, Los Angeles, Boston, and New York. Hybrid Networks was founded in 1990 with funding from its founders and venture capitalists, as well as help from a substantial R&D contract with ARPA. Their version of Cable Internet is known as the Hybrid Access System (HAS) IN channel service.

The first thing to understand about Cable Internet is that it typically operates over an asymmetric transmission channel. While data rates of up to 10 Mbps are achievable for incoming traffic between the cable head and the user, outgoing traffic is usually sent via a dedicated modem connection, although faster outgoing connections such as a 56 Kbps leased line or ISDN are also possible.

An alternative outgoing connection is needed because most cable service providers do not support upstream channels, and those that do usually must transmit over copper cable and can only provide 2-3 very noisy channels. Noise is a big problem for upstream channels operating over copper, since copper wire is much more susceptible to noise than fiber, and various types of noise (ingress, micro reflections, leakage, etc.) accumulate as the signal moves upstream toward the cable head. As a result, modems capable of operating over upstream cable channels are quite sophisticated and expensive, running approximately US\$1,000. System upgrades such as adding upstream signal amplifiers, or rewiring with fiber optics, would allow cable operators to support two way data transmission, and some already have this capability. How quickly other cable operators follow suit depends on whether they feel they can justify the extra cost based on end-user demand.

As with satellite links, asymmetric cable Internet connections will appeal to those who receive much more traffic than they transmit. People who receive news feeds, or use multi-media browsers such as NCSA Mosaic, or are heavy users of the various FTP archives will fit into this category. BBS sysops may or may not, depending on what services they offer.

Remember: since you have 10 Mbps incoming peak capacity, but possibly as little as 14.4Kbps going out, you will not be able to allow users to telnet into your system using Cable Internet. This is because when more than one of those users tries to download, the packets will have to travel from your BBS out over the 14.4 Kbps outgoing Internet connection, which will saturate. You also will not be able to set up your BBS as an FTP archive, for the same reason.

However, you will be able to allow dialin users to download a file via FTP. These users will not have a problem, since the packets from the remote FTP host will come in over the 10 Mbps cable link. When they download the retrieved file to their home machine, their packets

will travel out over the phone line they dialed in on, not over the Internet hookup, so again, there will not be a problem. Allowing users to access remote Gopher and Archie servers is also ok, although your BBS would not be able to act as a Gopher server itself.

Cable Internet is therefore a good match for the BBSNet package being readied by Murkworks, Inc. According to Brad Clements, "BBSNet supports Incoming/Outgoing telnet, FTP/Archie, and Gopher. BBSnet supports PCBoard (/M version required for incoming Telnet), The Major BBS (advanced LAN option required for incoming Telnet), WildCat!IM (Version 4 require for incoming Telnet), Searchlight, TurBoard and other Fossil compatible BBSes. If a BBS can run on top of a FOSSIL driver, it can support incoming Telnet, and if it can execute a DOS door, and provide a FOSSIL interface to your async port, it can support dial-up telnet, ftp/archie and gopher."

As with other cable data services, Cable Internet requires a specialized settop box, which Hybrid calls a "Remote Link Adapter." This is basically a router, but it is much easier to set up than the average router, since all you have to do is plug the cable hookup and the modem cable into one end, and connect your Ethernet Thin-net cable to the other end. You also have connect the modem cable to your modem, and plug it into a phone line, but you won't need to figure out the modem initialization string, since Hybrid can download this into the Remote Link Adapter remotely. Downloading this string into your adapter, as well as the rest of the adapter configuration, is accomplished without any intervention on your part, using a cable channel reserved for this purpose. It is also possible for the service provider to diagnose problems remotely; about the only time you would have to bring the adapter in for service is if it was not tuned correctly. Of course, you will still have to setup your TCP/IP software, and your local area network, and perhaps a BBS add-in package such as BBSnet, and as we all know, this is not always a piece of cake.

Although a single Cable Internet channel can be shared by up to 200-300 people, since the traffic is one way from the cable head to the end-user, this is not a "multiple access" medium in the Ethernet sense. Each station merely listens for traffic meant for them, and receives it

when appropriate; since there is no upstream transmission, only one host is using the medium at a time (the service provider) and there are no collisions. In order to prevent eavesdroping, Hybrid's Remote Link Adapter utilizes DES encryption. This encryption only applies between the cable head and the Remote Link Adapter, so it is completely transparent to the end-user.

Since the 10 Mbps bandwidth is shared by up to 200-300 people, in practice you will not be able to sustain the 10 Mbps peak transfer rate for very long, and in any case it is likely that your cable provider will only have a T1 or 1.5 Mbps connection to the Internet. This means that the 10 Mbps peak transfer rate only applies to transfers between the cable head and the end-user, and that users ftp'ing to site such as oak.oakland.edu will see T1 transfer rates at best. Due to other network traffic, in most cases, you probably won't average more than 400-500 Kbps.

The bottleneck between the cable head and the rest of the world has other important implications. When transmitting multi-media, there is a big difference between the 10 Mbps peak transfer rates possible over cable, and the 1.5 Mbps attainable over a T1 link. As a result, multimedia service providers will probably want to colocate at the cable head. Asynchronous Transfer Mode (ATM) is being looked at as a possible means of linking cable heads together, but whether this will be economically viable depends on end-user demand. Aside from the utility for cable Internet purposes, such ATM links between cable heads would also allow for game players in one city to interact with players in another city.

ven assuming that you can only get effective transfer spedds of ▲ 400-500 Kbps, you are still doing a whole lot better than a 14.4 Kbps modem connection, especially when you consider the price. Hybrid Networks charges approximately \$100/month for their IN channel service, which includes a dedicated dialin port for the modem. The \$100/month price applies only to users requiring a single IP address, although Hybrid also offers connections for networks, so that you can hook up an office or an entire laboratory at a school. In addition to the monthly fee, you will also need to purchase a Remote Link Adapter (RLA), which costs \$1495. The model 100 RLA connects to your computer via an Ethernet port, and there is also a model 200, which plugs into an S-Bus slot on a Sun workstation.

To put this into perspective, a T1 level connection (1.5 Mbps) typically runs at least \$4,000/month, which includes both the service provider fee and the cost of the leased line. Cable Internet is so much less expensive because it makes use of existing cable connections, which were wired in the 1970s when costs were lower. Using a one-way transmission medium is also a big advantage, since this makes it possible to dispense with the expensive switching equipment required by the telephone system.

Since Cable Internet has a large advantage in price/performance over conventional high speed Internet connection alternatives, some have forecasted a potential market of more than US\$1 Billion by 1995, which would translate to more than 800,000 users. With channels at a premium in many areas, you might wonder how it will be possible to achieve such a high usage rate. With only 200-300 people per channel, wouldn't you need a very large number of channels in every metropolitan area? By 1995 you will have Nintendo, Sega, and 3DO offering two-way high-speed compressed

video as well as Microsoft and several other setop box makers such as Zenith. Given all these firms vying for channels, the competition might become something of a dogfight. Even with 500 channels, it does not seem very likely that you could get 100, or even 50 channels allocated to the Internet. The answer is that it is possible to reuse channels by breaking them into smaller and smaller cells as demand increases, similar to the way that cellular phones work.

Before signing off, I should probably also note the announcement of HOME-Works by Zenith Communication Products, a division of Zenith Electronic Corp. HOMEWorks consists of an external modem as well as an RF modem offered as a PC adapter card. The adapter runs \$495, but this does not include the cost of the service itself, which will be billed as a monthly fee. HOMEWorks comes configured with 2 channels, each of which contains 4 subnets: when the connection is first initiated, the RF modem chooses the sub-network with the least traffic to transmit over. The low price of the HOMEWorks adapter has caught the eye of a few sysops, and there is some talk about using it to deliver mail and conferences within a metropolitan area, as well as to permit high speed logins.

For further information on Hybrid Networks, contact Craig S. Strachman, Manager, Marketing Communications, Hybrid Networks, Inc.; 20863 Stevens Creek Blvd., Suite 300, Cupertino, CA 95014-2116, (408)725-3262, fax: (408)725-2439,

email: css@hybrid.com.

For more information on **BBSNet**, send mail to **info@murkworks.com**, or contact MurkWorks, Inc., P.O. Box 631, Potsdam, NY 13676, (315)265-4717.

The goal is simple: To increase the access and profitability of your BBS, and do it in an easy, economical way.

The answer is simple: Work with a network carrier who has the technology and resources already in place to make it happen right now . . . at the lowest price.

Utilizing its X.25 packet-switched network, the ADP/Autonet Division can help a sysop become a nationwide, or even international, business practically overnight. Autonet provides the PDN (or VAN) needed to transmit data for the BBS. It literally puts ADP's network to work for the sysop.

The X.25 protocol, in addition to being economical, also offers superior error-checking capabilities and ensures error-free transmission.

If you want to expand your BBS at the lowest possible cost, call today. We'll rush you a free information packet that will show you how a sysop can grow fast with ADP/Autonet.

EDUCATION LINK

by Bill Gram-Reefer

THE SHAPE OF THINGS TO COME?

f you want a peak into the future of education and communications, or want to roll up your sleeves and make it happen yourself, then pay close attention to a recent request for proposals from Pacific Bell in California. CalREN, the California Research and Education Network, is Pacific Bell's program to stimulate the development and dissemination of high-speed data communication applications. CalREN's goal is to promote the development of applications that: Improve education, in addition to the improvement of health care delivery, business and governmental processes, facilitate business development and job creation, and improve the economic competitiveness of California.

CalREN, an established trust of Pacific Bell, will promote applications development by sponsoring demonstration projects which are dedicated towards these goals. In fact, CalREN will sponsor and fund the high-speed data communications component of approved collaborative projects for six to eighteen months from project implementation. Funding is targeted for the Greater Los Angeles and San Francisco areas. In both the Northern and Southern California CalREN geographies, those areas served by GTE are excluded unless special arrangements have been made with GTE.

CalREN issued RFPs for applications involving Asynchronous Transfer Mode (ATM) in the Greater Los Angeles and San Francisco Bay Areas in September and October. This Request for Proposal (RFP) is for the solicitation of CalREN projects focused on specific educational applications. Both public and private educational organizations are eligible to apply.

Applications must include one or more of the following Pacific Bell data communication services: Switched Multi-Megabit Data Service (SMDS), Frame Relay Integrated Services Digital Network (ISDN), or Switched Digital Services 56 (SDS-56). Traditional residential or commercial phone service is not included in CalREN funding. Project results must be openly available to the public.

CalREN seeks collaborative projects which focus on the development of a specific educational application. Generally approved projects will be pilot or demonstration in nature. These educational applications must involve the use of high-speed data communications, benefit a broad community of users, and address one or more educational priorities including the: promotion of life-long learning environments, improvement of the quality and effectiveness of instruction and learning through the use of communications technology, use data communications to increase access to the informational, instructional and technological resources necessary to support life-long learning, facilitate the integration of communications technology into school curriculum aligned with the instructional frameworks and guidelines for each education segment.

Other preferred applications include the development of distance learning and home schooling applications which integrate voice, data and video through such data communication services as ISDN. According to the RFP, potential applications might include team teaching, tutoring, and teacher training through video teleconferencing or desktop video. CalREN also supports collaborative projects which demonstrate the educational value of high-speed Internet access. Potential Internet applications might involve curriculum development, on-line research, primary data collection, on-line mentoring of students and/or teachers and other uses. Plans for Digital library applications to increase access to educational materials and other computing resources and promote database resources are also high on Pac Bell's priority list.

CalREN hopes that new proposals will broaden the availability of online services as well as create models that show how costs can be driven down. Special consideration will be given to applications which extend the educational benefits of CalREN applications to communities that do not typically enjoy access to technology. Underserved populations might include students with learning disabilities, disabled students or students from rural or lower socioeconomic communities.

CalREN strongly encourages collaboration and cooperation in project formation. Generally, multiple organization participation is expected. CalREN seeks project participants from all segments of the education community such as public, private, K 12, post-secondary, libraries, vocational and adult education. Projects that cross these educational segments and/or link the education and other communities will be favored. Partnerships between public and private organizations are encouraged under CalREN.

CalREN plans to award at least 20 projects under this RFP. CalREN seeks to balance the distribution of these projects between the North and South geographies. Proposed projects are not subject to a monetary limit and are expected to range in size and scope. For example, one project might involve 30 to 40 ISDN lines to connect several school sites for curriculum development and home/school communications. Another might require only 4 to 5 SMDS or Frame Relay connections between educational and community service organizations to provide distance learning. CalREN will award recipients by April 15, 1994.

Project proposals for CalREN funding must be received by 5pm on March 14, 1994. Receipt of proposal submissions will be acknowledged in writing. Proposals must be limited to 15 pages in length, including the executive summary. Send five copies of the proposal to: The CalREN Program, c/o Pacific Bell, 2600 Camino Ramon, Room 3S-306, SanRamon, CA 94583. CALREN@PACBELL.COM (email); 800-CALREN7 (voice); (510)277-0673 fax.

APPLE'S HIGHER ED GOPHER

The Apple Computer Higher Education Gopher Server is available through Internet, on a gopher server that is housed at the University

of Minnesota. This program provides an innovative solution to the challenge of maintaining ongoing communication with the higher education community.

In addition to Apple information and software, it provides a unique way (using a gopher server) for users to interact and participate in discussions for seven academic disciplines. Each discipline has a chairperson, an expert in their respective fields, who write articles every other month about technology integration in their disciplines. Dialog folders are available for each discipline to share information in: Business, Computer Science and Engineering, Library and Information Systems, Mechanical Engineering, Medical and Health Sciences, Schools of Education, and Foreign Language. Other disciplines will be added in the future.

Apple also provides information on Apple Products, Regional Marketing News, Apple Corporate News, Higher Ed Marketing Info, Macintosh Freeware and Shareware, Disability Solutions, NetNews Groups of Interest, Intellimation Software Catalog, Query Publications, and Syllabus Publications. Apple will be adding new information and services to this system on a continuing basis.

To gain access to the Apple Gopher server on Internet, you need to obtain Gopher, a client application from University of Minnesota, which may be downloaded via anonymous ftp from boombox.micro.umn.edu under the directory /pub/gopher/Macintosh_Turbo_Gopher. To download, use any ftp applications available. You also need the MacTCP driver to work with the Gopher client application.

Macintosh users need to ftp the Macintosh Turbo Gopher application "Turbo Gopher.hqx" to their local drive. Once the client application is copied, the user should decompress the application (un-binhex) with StuffIt or equivalent decompression tools. Once uncompressed, the user may launch the Gopher application and the application is configured to connect to the U of MN campus wide information system by default.

In the main "Home Gopher Server" window, the user will find "Information about Gopher" icon. This icon contains detailed description on Gopher clients and servers. Double clicking the icon will drill down and open the contents of the folder. You will find Apple's server under "Other Gopher and Information Servers... All the Gopher Servers in the world...Apple Computer Higher Education Gopher Server" path.

Apple's Higher Education Gopher server is also available "info.hed.apple.com" Internet domain name address. The user may setup direct access by using the pull down menu under "File... Another Gopher at..." and Server "info.hed.apple.com" to directly access Apple's server. There are also book marks and a "setup... configure gopher preferences" menu available for automated log-on procedure. DOS or UNIX users may also retrieve the client application from boombox.micro.umn.edu. For more info regarding Apple Higher Education Marketing contact Judy Martinson at (408) 862-7709.

MORE ONLINE COURSES

This column's recent report of colleges offering online courses brought some enthusiastic response and so here is another way to get that diploma via the telephone lines.

Chemeketa Community College, in Salem, OR, began offering courses online in 1991. Starting with a C-Programming class, the college now offers a variety of for-credit courses online including courses in Computer Science, Technical Writing and Word Processing, English Composition, and General Psychology. Some non-credit courses are offered, as well, such as Modem Communications 0616 with Instructor Gary Halleen. As an extension of its correspondence courses, the school also is implementing a two-year Associate of Applied Science degree in Fire Suppression and Fire Prevention. This opportunity gives fire fighters from remote areas the ability to enroll in a program that lets them communicate with others in their field.

Chemeketa Community College contracts the online classroom space through a local BBS, Chemeketa On-Line. Students can communicate with instructors and classmates, as well as attend cyber lectures and participate in electronic forums. Registered students are also given access to the nearly 400 other forums on the local BBS. The school hopes to have an Internet address soon and, at this writing, is waiting for its wcUUCP software to arrive. For more info contact: Janet King (503) 769-7738 (voice).

Bill Gram-Reefer, based in Concord, CA, is president of WORLDVIEW, specializing in connectivity and communications. E-mail Bill at:wk05156@worldlink.com

Announcing REAL TIMES (Fracterm V2.0) Is this the Holy Grail of Online Imaging?

Check These Incredible New Features!

- Users see **formatted pages** with multiple images, columns, fonts, using Imagen's new *RT Compress* technology, in as little as ten seconds!
- Internet callers use mouse-driven menus to view catalogs and publications direct to their screens.
- REAL TIMES works with UNIX, OS/2, mainframes, NT, DOS, you are not locked in to any host software, and can upgrade at will.
- New image formats provided include JPEG, GIF, PCX, TIFF, TGA, BMP, WMF, WPG, DIB, EPS, DCX, PICT

"When it comes to online viewing the best method I have seen is implemented by Imagen."

Jim Thompson, Boardwatch Magazine

REAL TIMESTM is **freeware** for your callers. **Database images** are displayed quickly and **clearly**, with associated files. **REAL TIMES** works with most BBS host software, and **makes Internet nodes friendly**. It's a whole new medium-**publications**, **real estate**, **art**, **travel**, **personnel**, **news services**-that you can add without disrupting your established menus. See us at **CeBIT '94!**

DON'T JUST BREAK THE WALLS.

FACE IT. ON LINE, EVERYTIME, YOU WANT TERRIFIC QUALITY AND RIDICULOUSLY LOW COST. (TOSSING IN SOME INCREDIBLE SPEED PROBABLY WOULDN'T HURT... WHILE YOU'RE AT IT.)

CRIS Delivers, at a velocity so fast you won't even have time to blow your mind. Expand your universe. Break out of old molds and restrictions. See where your imagination can take you. Enjoy a real BC / AC (before CRIS / after CRIS) experience.

CRIS PROVIDES FULL **Internet** access. Sending and receiving **E-mail** is not a problem. **BBS Direct**, which allows you to connect directly to your favorite BBS's, is available to you. **Teleconferencing** is simple with CRIS, as is our GUI [Graphical User Interface.]

Inside CRIS are "tons" of multiplayer, real-time **games**. Or if you'd like to simply chat. Jump on. Cris is also an excellent idea for **SYSOPS**, since it allows users worldwide access to you. With CRIS, there are no barriers.

A.C.

The Biggest Little Book in the World

Pocket PCRef

"It's MY book - it stays on MY desk, and the rest of you guys keep your cotton pickin bands off it."

That's how it started. The fight ended with a copy of Tom Glover's Pocket PCRef on EVERYBODY's desk at Boardwatch, but they still tended to "travel" a bit. So we decided to order a few CASES of them and offer them to our readers. Why did this little book cause such a stir? First, it has a very simple thing going for it. It's a little bitty book - pocket sized. We don't actually carry them around in our pocket ,but it can sit on the desk without taking much space ,you can drop it into a briefcase and again, it's almost not there. But authors Tom Glover and Millie Young have piled more tabular information on personal computers into this little book than anything like it we've found. It's the kind of information you only need once in awhile (couple times daily around here), but when you need it - you need it pretty badly - and preferably without a search through the lost ruins of Egypt in the back room. In 496 pages -

DOS Command reference - all of them through version 6.0 - some 200 pages.
DOS History - release dates, file sizes, the works.
PC Industry Phone Book - a little over 3500 telephone numbers of companies prominent in the personal computer industry. That gets thumbed a bit.

Hard Disk Configuration Data - ever lose your CMOS? You're bard disk disappears. All your data is there, and you can easily get it back, if you can just remember bow many heads, bow many cylinders, bow many sectors per track, a little info on the landing zone, etc. Rub a lamp. This little book lists 2300 different drives with exactly the info you need to get back up in seconds.

- Haves AT modem command set all of it.
- Keyboard scan codes all of them.
- Port and Cable pinouts for parallel printers
- Hardware Interrupts and I/O maps.
- Software Interrupts
- ASCII/Decimal/Hex/EBCIDIC
- PC Memory Map
- Address Maps
- Printer and Plotter control codes HPGL, HP PCL5, Epson LQ860 - dozens of others.
- **Error** codes
- DMA Channels
- **■** Video Scan Frequencies
- Pinouts for everything in your PC.

Jack Richard

Plus product support bulletin board lists and in this 3rd addition, we talked them into including the Boardwatch Magazine Reader's Choice top 100 Bulletin Board lists and in this 3rd addition, we talked them into including the Boardwatch Magazine Reader's Choice top 100 Bulletin Board list. This isn't light reading, it's not a "how-to" book. It's a little (3.2 X 5.4 X 0.6) reference book with hundreds of little tables of information, phone numbers, and conversion tables. The kind of information you only need when you need it, and then you usually can't find it - or if you can, it's buried in some monster manual full of somebodies theory of how the computer industry ought to be. With this midget lookup book, you can quickly lookup the thing you need to know now. Send me \$15.95 - I'll send you one of your own. And yeah, I suppose you could carry it around in your pocket if you want.

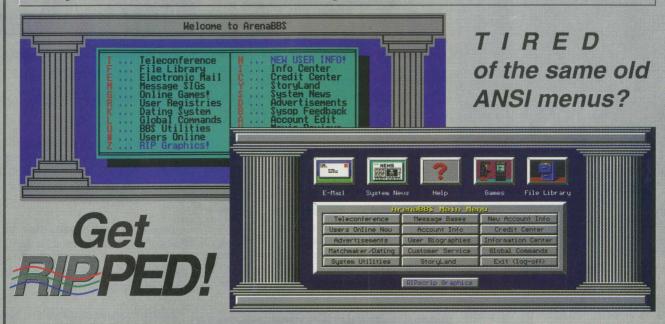

Call 1-800-933-6038 for MC/Visa or Boardwatch Magazine Pocket PCRef 8500 West Bowles Ave, Suite 210 Littleton, CO 80123

Recit Graphics

Graphical User Interface for your Information Server/BBS

Graphical user interfaces have been available on many different computer systems for years. But until now, you haven't been able to get a bulletin board system with a GUI unless you used a proprietary solution. Until now. RIPscrip (Remote Imaging Protocol script language) is a published specification developed by TeleGrafix supported by over twenty-five leading vendors on the PC, Macintosh, and Unix platforms. Any on-line system that can display a text menu can use RIPscrip. Chances are that your favorite BBS has RIPscrip support built in.

RIP*draw* is the entry level RIP*scrip* graphics creation package. Designed for recreational system operators and the telecommunicator, RIP*draw* is perfect for creation of stunning on-line graphics at a low price – \$40. • Special - \$35 •

RIPaint is a graphical drawing environment designed for creating menus and screens to supplement or replace a host's existing menus. Integrated tools for creation of clickable buttons, creation and use of bitmap icons, and optimization of files makes this a powerful tool for creating a graphical user interface for your system at an affordable price – \$200.

RIPscrip Graphics are supported by these bulletin board systems:

The Major BBS (Galacticomm) NovaLink Professional (ResNova) Osiris XLT (Int'l TeleCom) PCBoard (Clark Development) Remote Access (Wantree) Searchlight (Searchlight Software) Synchronet (Digital Dynamics)
TBBS/TDBS (eSoft)
Wildcat! (Mustang Software)

Recipient of the 1993 Dvorak/Zoom Telecommunications Award

GRAPHICALLY SPEAKING

ONLINE GRAPHICS OFFER MORE IN 1994

By Jim Thompson Western News Service

he new year promises to see several breakthroughs for on-line graphics and photo imaging for the BBS world. Judging by the plans from the leading players in this arena, 1994 will be the year when photo transfer and high quality graphics break loose from their limitations and truly begin to define and sculpt the future of the online world.

Here is a run-down of some of the new things to look forward to from TeleGrafix Communications, Inc., Imagen, Inc., Durand Communications, Inc. and Hamilton Telegraphics, Inc..

(Please note that these products are "works in progress" and there is no guarantee that the released versions will contain all the features reported here.)

TELEGRAFIX COMMUNICATIONS, INC.

eleGrafix Communications has been hard at work improving their already widely used and high regarded RIP protocol and RIPterm terminal program.

RIP Version 2.0 will include a host of new features when it is released "in

the first quarter of 1994," according to Jim Bergman of TeleGrafix, Communications, Inc.

The new specification for this protocol will include Resolution Independence and 24-bit color support.

"Resolution Independence means that we will not be tied down to any particular resolution. The files will be created in a format that will make them independent of the display hardware. This means you can use anything from the existing 640 x 350 EGA to 1224 or beyond. The software will display the image at whatever resolution your system is capable of," notes Bergman.

Support for 24-bit color will mean a major improvement in this already very impressive language. Bergman also points out that under RIP once a color is set, all drawing is done in this color until it is changed. This keeps the commands, and consequently, the transmission times, very short.

RIP screen showing the blending of text and graphics

Another new feature of RIP 2.0 will be sound support. "This will allow for the ability to play digitized sound, like WAV or MIDI files. Since the current band-width does not allow for the transmission of the existing formats, the sound files will likely already exists on the caller's end and the host will send a command to play-back those sounds," Bergman says.

He adds that they are "looking into the ability to transmit sounds, for example, MIDI files. In this case, you are just transmitting the notes, based on a certain instrument. So, you can transmit sounds almost real time. But

RIP screen showing complicated graphic

this only works for music, not for voice."

The new version of RIP will also have the ability to transmit and display images like JPEG, GIF and TIF. Jim says this ability is the number one most requested feature.

Improved font capabilities will be added, "so people can do more page layout types of things. This would allow for things like an on-line newspaper," he notes.

Multi-windowing will allow several windows on the screen at one time and allow the host system to send commands and make updates to only one window at a time while the others remain unchanged.

The best news from TeleGrafix Communications is that RIP version 2.0 will be fully compatible with previous versions of the program.

I asked Bergman if the new additions will mean slower overall performance. "The changes and additions will only have a minimal effect on the language. For example, we are now using only 2 bytes of transmitted information to specify color. When we go to 24-bit color, that will only go to four bytes. These four bytes will allow us to specify a 24-bit color. This combined with an increase in the general speed of the program means that version 2.0 will not be any slower than our existing product," he responded.

Bergman says they have no plans to release a Windows version of the terminal program (RIPterm). However, he notes that the current DOS version will run under Windows and that both Qmodem Pro and Telix have Windows products that support RIP.

"We have not established a cost for version 2.0, yet. But for our existing customers, our history and policy has always been to make the upgrade fee, nominal. For example, when we came out with version 1.5, version 1.0 owners could upgrade for \$25. We will continue with this policy and make the upgrade fee nominal," Bergman says.

IMAGEN, INC.

Imagen, Inc. is the only on-line image system that is using Fractal compression. This technology is, in my view, still the best method for transferring high quality images via modem. It produces extremely small file sizes (as small as 5k) yet maintains extremely high quality.

Best of all, because of the math based algorithm employed by fractals, the images are resolution independent. Resolution independence means the photos or images can be enlarged to any size and they will maintain their original quality. Even projected, the fractal images are smooth, clean and remarkably crisp. (See Boardwatch, July, 1993 for a review of Fracterm and a full explanation of fractal compression)

I have been using the Imagen, Inc. system for over a year now and I still am amazed every time I see the images.

Dwight Jones, CEO of Imagen, Inc. says the next release of Fracterm (version 1.5) will add a number of new features including better printer emulation function, improved modem support, and improved dialing and download directory functions.

"We have also re-worked the download engine to a considerable degree. It is a lot more 'laid-back' which is to say it is more stable and understanding. It will more easily integrate into certain bulletin board systems. In the past, some operators of PCBoard experienced occassional problems with our product. PCBoard operators will find our new product not only easy to use but also very stable," says Jones.

Version 1.5 will also be adding support for other image formats. According to Dwight Jones, they will add both decompression and conversion for JPEG, GIF, TGA, PCX, WMF, WPG, DIB, EPS, PICT, GIF, BMP and TIF

formats. "This will allow a caller to view any of these image format files, received from any BBS, without shelling out or switching to another program," Jones says.

With some restrictions, version 1.5 of Fracterm will allow one not only to view each of these formats but also to covert between formats. This ability will give system operators a wide variety of choices and flexibility. A sysop could post both a fractal image along with a JPEG or GIF file. When received, Fracterm will uncompress and/or display the images immediately. The program will also be a valuable tool as an "off-line" viewer of images.

The plans also call for full support of TeleGrafix's RIP version 2.0. This combination of full-color graphics and high quality, resolution independent photographs could make Fracterm a true star of 1994.

Fracterm capture showing display of FIF files on Marlboro Racing News

Their one problem may be the continued ignoring of the Macintosh market. Many of those serious about graphics and photo-realistic reproductions are using a Macintosh based system. To neglect offering a terminal program for this segement of the computer world could be a mistake in the long term.

One of the more exciting projects being tackled by Imagen, Inc. is the transfer and display of fractal images over the Internet. Ron Estrin, senior programmer for Imagen, Inc., is very close to making this a reality. During preliminary testing in early December, he had successfully transferred the Fracterm menu structure (CONFIG. BBS file) which triggers the image viewing function and decompression

Fracterm capture showing display of JPEG, PCX and FIF images

engine of the terminal program. "Transferring the fractal images (FIF files) should not present any major problems and we should have it working very soon," Jones says.

The prospect of being able to send high quality graphics via the Internet is exciting, indeed. Whether it is Imagen, Inc., Durand Communications, Hamilton Telegraphics or anyone else, the the addition of high quality, full-color images and photographs, will make this world-wide electronic highway through cyberspace a true dynamic link to the world.

Version 1.5 of Fracterm is slated for release by the end of December, 1993 which means it should be available by the time you read this article.

Another exciting project for Imagen, Inc. is the development of a new compressed fax file format. This new technology would be incorporated in Fracterm version 2.0 which will remerge under the name of "Real Times." The new fax format would be an "RTC" format as compared to the "RTF" format currently used for the transfer of a document via a fax modem or internal fax board.

The new format would produce a file size that is up to 80 percent smaller than the same file in RTF format. Typically, an RTF file is about 30k in size. Under RTC, this same file would be only 6k in size. Best of all, the RTC format allows for high qualtity, 256-color images. This could finally mean an end to the blurred, hard-to-read black-and-white faxes that curl off on that awful paper.

Another big advantage to RTC over RTF results from it being a hybrid file instead of a single element or, essentially, a picture of a document. The

Alt-Z for Help | ANSI-BBS | 38400 N81 FDX

Online 00:01

Beautiful full color ANSI screens allow callers easy cursor control selection of topical categories and individual stories. Colorized text is easy to read. This easy to install door makes your BBS look professional and current with a major daily newspaper online each morning. Supports both ANSI and ASCII callers. Written specifically for PCBoard. Now you can easily display this popular online text service.

Too see the USA Today Door for PCBoard online, dial the Aquila PCBoard BBS at: (708) 820-8344

To order the USA Today Door for PCBoard at just \$99, contact Gary Funk, Boardwatch Magazine, (303) 973-6038

RTC would be a combination of a fractal (FIF file) or JPEG for the graphics and pure text for all the written material. This means that the text can be edited and/or searched.

Real Times version 2.0 will include RTC and all the features of Fracterm version 1.5. Imagen will make the the RTC specification available to other programmers. According to Dwight, "We will be licensing DLL's and Objects in a developer's package. We would distribute a DLL that is OLE 3.0 compatible." He adds that "anyone writing fax or terminal software who is interested in this technology, should call Imagen, Inc. for details."

HAMILTON TELEGRAPHICS, INC.

some of the visionaries in the online graphics arena. His clear view of the future of bulletin boards combined with his skills as a programmer makes RoboBoard/FX the system to watch. Presently, Seth is making some exciting changes and additions to his already feature-rich BBS (See Boardwatch, December, 1993 for a full review of RoboBoard/FX).

The new additions include, "the ability to display images, like JPEGs, as easily as using vectors for the display of graphic images. The plan is to store these images on the user's computer. Along with this would be the ability to have such material expire after a certain period of non-use," Hamilton says.

Hamilton Telegraphics, Inc. is also releasing an Internet/Usenet tool called RoboUUCP. This new tool was created by Merlin Systems and is marketed by Hamilton Telegraphics. Inc.

"It will allow you to do file requests or FTP's and send and receive Internet mail. You can also enter into and receive Usenet news groups. PageSAT support will allow for receiving a full Internet feed. It will automatically toss incoming files into file areas, UU-encode and UU-decode file attaches on messages. For the user, all this will be seemless," says Seth.

He has also put the final touches on a new file system which allows for RoboBoard/FX to query 250,000 files on virtually any type of query in 15 to 25 seconds (this is on a 486 machine).

Additional features include:

- 1. The ability to have ten line descriptions
- 2. The ability to attach files to messages
- 3. The addition of a Fax option add-

An interim release of the RoboBoard/FX terminal program should be available by the time this issue of Broardwatch arrives on your doorstep. Version 1.02 will add a scroll-back buffer, inform the user when he/she is out of hard drive space and/or memory and fix a number of small bugs.

The most exciting news from Hamilton Telegraphics is a complete revamping of their already excellent protocol, Tel-FX.

"The new Tel-FX will be a graphics engine that uses packets instead of a continuous stream as is the case with other protocols. This will allow us to eliminate line noise and to to 'off-load' lower level tasks like typing and the inputting of messages to the client software until it is needed on the host end. During the dead-space created by these tasks, we can transfer background or file packets,"

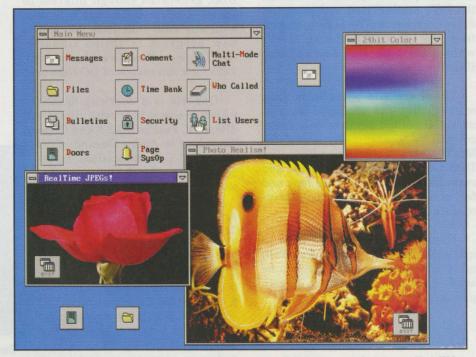

Screen capture showing floating windows under new Tel-FX Protocol

This technology will open the door to doing two things at once. For example, in a file area, you could mark several files and begin the transfer as soon as they are marked. Most of the time, a user is listing a file area, reading or entering messages, or just looking around. The result is a lot of "dead space." The new Tel-FX protocol would take advantage of this "down time" for transferring files or images. In essence, it would be an on-line, multi-tasking system.

According to Hamilton, the new protocol is based on the existing protocol but is "more packet oriented and more efficient."

I asked him to compare the new Tel-FX protocol with a protocol like Zmodem.

Screen capture showing graphics and JPEG files using new Tel-FX Protocol

"The purpose of protocols like Zmodem is to send a file without errors. Until now, a graphics protocol was designed to send a series of instructions that allows the terminal program to draw a particular image. What we are doing is combining the best of both protocols.

"Most file transfer protocols are based on packets. Essentially, we are enclosing the graphics instructions into similar packets. In the long run, our graphics protocol will be more like a file transfer protocol with a serious bi-directional twist combined with a graphics protocol which contains the tokens and instructions to draw images, set up input areas and control text input and windows."

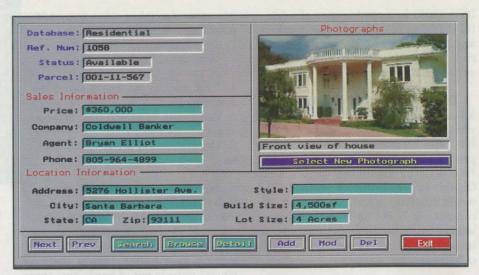

He adds that the new protocol will be backwards compatible with previous versions allowing existing graphics to be used.

Although the new protocol will be much more sophisticated than the existing one, it will reportedly not require a more robust processor.

"Actually, we have developed some more friendly windows, display routines and math routines which will make the work load on the user end a lot lighter. It should not take any more processing requirements than our present system because all the I/O's are buffered and interrupt driven. One can receive material from the inbound buffer in blocks without any noticeable slowing," says Hamilton.

There are also plans to include compatibility with windowed environments. Hamilton says the new protocol will be "conceptually ready" for MS-Windows, Macintosh or OS/2. The DOS terminal program will act and react like windows with the look and feel of a program under those native operating systems.

Hamilton says he does plan to make the protocol available for use in other BBS packages. "I expect to be sending out specifications to certain people, soon," he says.

CLASS Screen capture with photo and graphics display as would be seen when combined with RIP version 2.0 which allows for 24-bit color

DURAND COMMUNICATIONS

A number of new programs, some of them very ambitions, are part of the 1994 line-up for Durand Communications. Among their offers for the new year are a database that works with most bulletin board programs, a program that will allow TBBS operators to display photos under a TDBS application and a top secret project they call CLASS.

Durand's work with DC-Term, a database enhansement program that works with Glacticomm's The Major BBS, generated enough interest to spawn a new version that will work with any BBS that runs doors. The new program is called Genesis. (NOTE: See Boardwatch, August, 1993 for a full review of DC Network)

Genesis is a doorway database which is compatible with dBase III, dBase IV, FoxPro 2.0/2.5 and Clipper. According to Andre Durand, CEO of Durand Communications, Genesis will also offer the following features:

- 1. Relational
- 2. Query by example
- 3. Form template entry and modification of database records.
- 4. Mouse support
- 5. RipScript compatibility
- 6. Pick list for database entry
- 7. Browse to detail jumping (jump with must between browse and detailed output)
- 8. Image compression and image viewing (link photos to the database)

"Genesis will bring all the features of our DC Network database to almost anyone who operates a BBS. It will work with our DC Term terminal program and incorporate our current image compression and viewing capabilities. When TeleGrafix Communications, Inc. (makers of RIPaint and RIPTerm) updates their terminal specificaions to 24-bit color, it will be added to Genesis," Durand says.

Durand will reportedly offer many of the same turn-key applications available under DC Network. These include real estate sales, automobile sales database, a dating service and contact phone book.

The product is slated for release by late February and will carry a price in the neighborhood of \$595.

Also planed for 1994, is an add-on to TBBS that will allow TDBS applications to use DC Term and link pho-

tographs to a database. According to Durand, "It will allow for the linking of TDBS databases with our terminal viewing program and image viewing specs. So, you can design RipScript xBase databases and then use our terminal program to view images on-line in TDBS databases."

He adds, "photos that are linked to a TDBS database can be viewed by callers using our DC Term program." The photos are compressed using a JPEG dirative (.CMP).

Durand says the program, which at press time had no official name, will be priced "around" \$395. It is scheduled for release sometime in January.

Between now and March 31, 1994, a sister company to Durand Communications, Synergy Communications, Inc. is "giving away" 100,000 copies of FILEX (File Exchange) for Win-

dows (There is a charge of \$9.95 for shipping and handling. Contact Synergy Communications for details).

This program allows for the moving of files and documents between two computers via modem by allowing the user to "look at" the hard disk of the remote machine.

"It has automatic, built-in compression and you don't have to worry about protocols. It automatically configures your modem and is compatible with standard communications programs."

Andre Durand sees FILEX as an alternative to the fax machine. "It is 500 percent faster than a fax machine and produces editable documents," he

The biggest project on the Durand drawing board is one they call CLASS (Client Access to Systems and Services).

Durand was guarded about releasing any details but he would say, "CLASS will set a new standard for on-line information services. We have signed up such clients as Ford Modeling Agency to put 6,000 top US models on line. We will also put food services, hotel reservations, industrial services and supplies, mapping systems, credit card verification and publication services online. We are lining up 'WorldCLASS' development partners now and will be releasing a structured program in the coming months.

Further information on CLASS should be available by April.

It is clear that 1994 will be the year when the battle for dominance in the on-line graphics arena will be fully engaged. After the dust settles, we may finally emerge with a graphic standard for the on-line community. The contest will not be an easy one nor will it be without its victims. Many may fall by the wayside, but the prize will be rich not only for the champion but for the BBS community as well. Let the games begin!

(Jim Thompson is Managing Editor of Western News Service in Los Angeles, California. He also manages the Marlboro Racing News BBS. CompuServe: 72777,2677, MCI Mail: 321-4127)

IF YOU HAD THREE WISHES

Take a close look and you'll see why so many sysops are switching to the Synchronet Multinode Bulletin Board System. For one, message networking is second nature for Synchronet. Not only does Synchronet support FidoNet, QWK, and PostLink (RIME) message networks, but network considerations are integrated into every aspect of the BBS. Synchronet's hierarchical message and file areas are the perfect organizational solution for today's multi-network message and CD-ROM file areas. Synchronet has many built in features that other packages either don't offer or require an add on, such as multichannel and private key by key chat, offline reader features, and multiuser CD-ROM support. First time operators appreciate Synchronet's elegant menu driven configuration, while experienced sysops revel in its wealth of options and flexibility. The list goes on and on. But don't take our word for it, check out the competition first. With Synchronet, you won't need three wishes.

YOU COULD TOSS THE OTHER TWO.

Why doesn't Synchronet have a special "multiport" version? Because Synchronet was designed from the ground up as a high-speed multinode BBS capable of running up to 10 nodes on a single 486. It's advanced interrupt driven output design combined with **DESQview optimizations maximize** CPU utilization, allowing Synchronet to out perform other systems running special "multiport" versions on expensive coprocessed I/O cards. For performance, features, and value, nobody beats Synchronet.

QmodemPro for Windows ...

Aren't you glad you waited?

CONNECTING THE WORLD IN '94

We had one goal for *QmodemPro for Windows*. To make dialing into Bulletin Board Systems easier, not harder under Windows. *QmodemPro for Windows* achieves this goal.

QmodemPro for Windows is the newest member of the Qmodem family, designed to make the most of today's most popular operating environment: Microsoft Windows. QmodemPro for Windows takes care of your data and fax communication needs, in one integrated package.

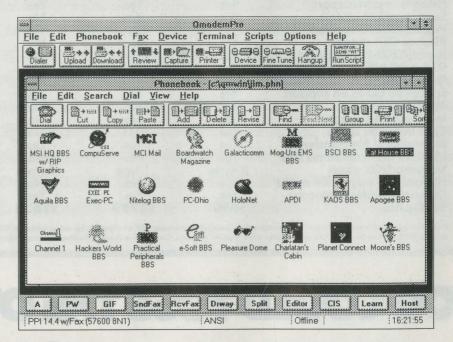

- Send and receive Faxes with your Fax modem.
- Transfer files with a full slate of protocols including Zmodem, Kermit and CIS B+.
- More than 30 terminal emulations, plus macros and programmable keys.
- Over 170 of the most popular modems are supported, along with LAN modem sharing devices.
- Includes RIPscrip graphic support in a true Windows environment.

QmodemPro for Windows is the **only** Windows communication program that was designed from the ground up to meet the needs of the active BBS caller. The all-new compiled script language gives you a level of power and control that rivals many standalone development packages. Automatic viewing of GIF and BMP files, even CompuServe weather maps, as you download. Comprehen-

sive manuals and on-line help for **real** communication users, from beginners to experts.

Simple enough for a beginner to use, *QmodemPro for Windows* is flexible enough to meet the needs of the most sophisticated modem user. You can set up a mini-BBS (Bulletin Board System) using the *QmodemPro Host*. Or you can write programs of your own which interact with *QmodemPro for Windows*, using its built-in scripting language.

QmodemPro for Windows is on sale now through Software, Etc., a national retail chain, and mail order outlets nation wide. Special upgrade pricing available to current MSI customers — reserve your copy today by calling our toll-free QmodemPro for Windows order hotline.

What are you waiting for?

New! Version 6.1 of The Major BBS

This latest version now supports "doors" to a second machine, multi-lingual/multi-protocol support for easy use of RIPscrip graphics, better messaging, and more! The Major BBS is the only BBS that supports up to 256 simultaneous users on a single machine, direct X.25 and LAN access, and plug-in DLL add-ons. You can expand the system with online fax services, databases, order entry, Internet access, a C developer's toolkit, and some of the hottest multi-player entertainment in the industry. A new RIPscrip add-on includes an integrated RIPaint and a complete out-of-the-box graphics interface! CALL!

Three more reasons... that great sysops choose G T E K

PCSS-8FX

- Ultra High Speed
Intelligent Octal Serial Card.
Has eight RJ-12 connectors, Up to
512K of dynamically allocated FIFO
memory, 24 MHz processor, Custom
gate array provides DMA transfer rates to 1
Megabit per second across the PC bus. I/O
mapped registers so no host memory is used. RS232, 422, 485 interfaces. Input Speeds up to 115,200
Kbps. Up to eight units may be installed in a single
computer for a total of 64 ports. DOS, OS/2, UNIX,
XENIX, Windows and FOSSIL drivers included.

PCSS-8X - Eight port Serial I/O card. Has 8 DB-25 style connectors with FULL modem support in an external enclosure which mounts to the rear of your PC. 16450 UARTS are standard, 16550 UARTS are optional. RS-232, 422, 485 interfaces. Each port is individually

addressable or may be located at a single address and selected via control code. Int 14H and Windows device driver and example code included. RJ-12 version available.

BBS550 - Eight port Serial

I/O card especially suited for BBS
systems. 16550 UARTS standard, ports
are individually addressable throughout the
64K I/O space. Individual interrupts may be
assigned to each port or interrupts may be
shared among several or all ports. 10 conductor RJ45 connectors with FULL modem support. Up to eight
cards may be installed in a single PC for up to 64 ports.
FOSSIL drivers included. DigiBoard, Hostess,
Galacticomm compatible. Call for list of supported BBS
software.

RSANET AWARDS

REPUBLIC OF SOUTH AFRICA BULLETIN BOARDS

Inspired by the Boardwatch 100 Reader's Choice Awards, a group of pioneering BBS operators in the Republic of South Africa banded together to do a similar contest for their community. We're most privileged to be able to present the results in this issue.

The RsaNET Users Choice Awards!

by Rob Fisher

wenty thousand Rands worth of prizes thanks to our sponsors! ZyXEL Taiwan, Datatec SA and Clarke Development USA! We really appreciate the support!

Many thanks to Greg Mahlknecht who came to my rescue with ViperVote++ version 0.01 which saved me about a million hours of analysing a nearly half a meg text file! ;-)

The results of the RsaNET Users Choice Awards competition are as follows:

1st Place

South Africa's most popular BBS is the 9 line Digitec Online (011)476-7136 gets the prestige of being number ONE! Sysop Anthony Gerada has asked that the first prize of the ZyXEL 19,2 modem go to the next in line as he was instrumental in securing the sponsorship from ZyXEL Taiwan! Many thanks Ant!

2nd Place

South Africa's second most popular BBS, the ten line LeClub BBS at (011)315-1791, wins the ZyXEL 19,200 U1496e+ Data/Fax & Voice Modem! . Ina Sonnenmoser operates LeClub.

3rd Place

South Africa's third most popular BBS is P.E.Technikon at (041)53-4278. Renaldo Rheeder of PE Technikon wins the USR Sportster 14,400 V.32bis Data & Fax Modem

4th Place

South Africa's fourth most popular BBS is Friendly City BBS at (041)51-1185. Greg Murrell wins the Falcon MNP5 2400 Modem!

SA's most popular Sysop

South Africa's most popular Sysop Anthony Gerada wins the USR HST DS 16,800 Courier Dual Standard Data & Fax Modem!

SA's Lucky Draw User

The lucky User who wins the ZyXEL 16,800 U1496e Data/Fax & Voice Modem and a 2 user version of PCBoard v15.0 is Mynard Du Preez of Kempton Park!

His favorite BBS is LeClub and Ina is his favorite Sysop! He uses QModem and Ripterm as his comm programs. He started BBSing in June 92 and is 20 years old. He does have a second phone line for his modem and now he can put his 2400 Octocom out to pasture and move into the high speed lane with his brand new ZyXEL! His favorite BBS software is PCBoard followed by Remote Access. Congrats Mynard!

CONTEST STATISTICS BBS results **Votes Percentage** Placing **BBS Name** 36% 1 DIGITEC 168 2 LECLUB 18% 86 6% 3 PE TECH 29 4 FRIENDLY 6% 28 5 NETLINE FLAGSHIP 16 6 CONCEPT BBS 15 7 ASPHYXIA 14 **8 NETLINE NORTHCLIFF** 12 9 CHATTERBOX 8 9 FAST! 8 9 TOP-LINE 8

Congratulations to Anthony Gerada's Digitec! Anthony has done a wonderful public relations job for the whole BBS community and his call rates consistently break all records! Digitec is redefining BBSing in South Africa! I have a feeling that Anthony has only just begun and I'm sure he will want to retain top spot next year! Keep an eye on Digitec, SA's most popular BBS!

Second placed LeClub run by the husband and wife team of Ina and Jurgen Sonnenmoser is also an outstanding BBS and has also been a pioneer in SA BBSing! LeClub is a relatively new BBS and it's rise to the second spot in SA in such a short space of time just goes to show what can be done if you give the users what they want!

Congratulations also to the two PE Sysops Renaldo and Greg! Both are single node BBS's (at the moment) and to be right up there with the biggies is some mean achievement! Especially for Greg Murrell who is only been in the game a short while!

Pla	cing Software	Votes	Percentage
1	PCBOARD	152	48%
2	REMOTE ACCESS	69	
3	TRIBBS	21	
	OTHERS	76	

What can I say? PCBoard has always been my all time favorite and it would seem that the rest of SA feel the same way! SA's number one and number two BBS's both run the ever popular PCBoard 15.0!

It is interesting that the newcomer TriBBS has made such an impact!

Pla	cing Sysop	Votes	Percentage
1	ANTHONY GERADA	95	27%
2	INA SONNENMOSER	62	17%
3	RENALDO RHEEDER	31	9%
4	GREG MURRELL	29	8%

8	MAC ANAMOURLIS	8	
9	ALAN KANOWITZ	8	
9	GRAEME SLOGROVE	8	

This is a very special category! Take a bow all of you! On behalf of the BBS community I would like to thank you for all that you have done! It's Sysops like you that really makes BBSing an addiction!

Placing	Software	Votes Percentage
1	QMODEM	95 23%
2	TELIX	93 22%
3	TERMINAT	61 15%
4	PROCOMM	30
5	TELEMATE	27
6	BITCOM	15
7	FRONTDOOR	10
8	RIPTERM	9
9	COMIT	8
10	MICROLINK	7
10	PC ANYWHERE	7

South Africa topples PROCOMM from the top spot! Well done to MSI! QModem Test Drive and QModemPro are excellent products and we look forward to seeing the Windows version that has just been released!

Telix hasn't changed much in recent times but remains lean and mean and popular!

It is interesting to note that 51% of the users are now using 9600 or faster modems!

Placing	Make	Votes Percentage
1	US ROBOTICS	82 18%

4	16800	25
5	OTHER	15
6	19200	10
7	1200	6

Interesting Stats

We asked wether the respondents used Microsoft Windows? It looks like Windows is going to be playing an ever increasing roll in our lives!

72% said they used Windows!

28% either don't have Windows capable machines, or they are clinging to the C:> prompt, or they have something against Uncle Bill!

Another amazing statistic is that 26% said they had installed a second phone line for the modem!

This BBS game of ours seems to be a really male dominated hobby! Less than 2% of the respondents were female! Now how on earth do we get the fairer sex interested in these black box's?

The vast majority (79%) of BBS users fall between the ages of 15 to 35. The heaviest concentration of users are between the ages of 19 to 26 with 39%. The 20 year olds account for 5% and are the biggest single age group.

The RsaNET User Choice Awards competition was brainchild of Ian Gerada and was organised by the RsaNET Admin Hierarchy with the aim of generating as much awareness of BBS's, BBSing and echo mailing as possible! Many thanks to all involved and I look forward to next years competition!

The RsaNET network was born out of the desire to promote Bulletin Boarding in general and to promote communication amongst all. Most of you probably know the RsaNET motto by now... and for those of you that don't.... here it is! "COMMUNICATION is the name of the GAME!"

Chicagoland's Largest System

Since 1988

Aquila has filled the computer screens of Chicagoland for over three years, growing from a single modem line system in 1988 to over 25 lines in 1992. Aquila's success over the years is due to the enthusiastic support of our users. New callers are encouraged to download our current file list and electronic mail conference listing. A short guided tour highlighting our system services is also available for new users. All of our information is automatically mailed to you to read in the comfort of your home or office. So pick up your modem and give us a call! You will find Aquila BBS to be the most valuable bulletin board in your dialer.

Programs - Thousands On-Line

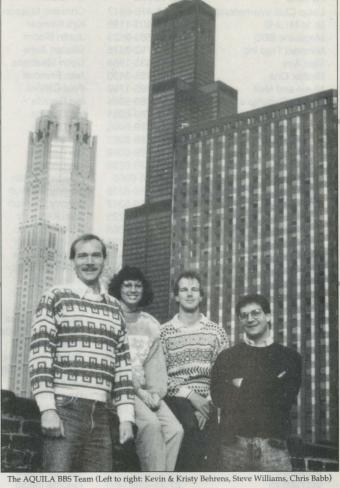

Give your modem a workout! We add new shareware and public domain programs everyday. Over 400 programs are added weekly. With more than 5 Gigabytes of on-line storage, we stock over 50 thousand programs. Aquila makes it easy to find the programs that are important to you, by organizing them into 120+ file directory categories everyday.

We cater to the Windows User

With Windows becoming the most popular user interface around, we make an extra effort to keep you supplied with the latest programs and enhancements by devoting a special conference area just for Windows containing 2000+ files organized into 40+ file directory categories.

Our organization and the latest programs make our file areas the most popular around. These are just a few of our most popular categories available:

Diagnostic Utilities System Enhancements File Organizers Word Processing Computer Games Music and Midi Sound Files Computer Animations CAD Drawing Utilities Business - Finance - Tax Novell and Lan Utilities Database Programming Icons - Icon Managers Wallpaper - BMP's Multi-Media Related Fonts - Font Utilities

New User Information

All first time callers receive by mail, our printed 'New User Information' and 'E-Mail Conference Directory' guide, as well as a 'Quick Command Guide' to help you get the most out of Aquila. The new user information covers system services such as answers to commonly asked questions, USAToday, Boardwatch Magazine, and Electronic Mail off-line readers. The 'Quick Command Guide' is a desktop lookup for using Aquila commands.

Aquila Starter Kit

Callers that are new to modem communications will find 'The Aquila Starter Kit' a great time-saver. Easy for the beginner and helpful for the expert! This \$39.95 kit includes the following:

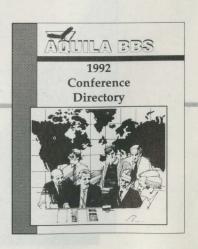

Procomm (communications program)
Full documentation for all BBS commands
Off-line file browsing program

Our complete file listing on floppy disk Off-Line E-Mail Reader Three month basic membership

Around The World E-MAIL Over 450 Conference Topics

We currently echo to and from ILink, RIME, Fido-Net and Throbnet with more to come in the near future. You can get virtually any question answered here and join in on lively discussions with people from across the country and around the world. We also publish our own 'E-Mail Directory' that is sent to all users of Aquila BBS. This directory lists all of our conferences by category and gives a brief description of the topic of each one. Here is a small sampling of over 450 interesting topics that we offer:

General Discussion Computer Related Vendor Support Programming Languages For-Sale Current Events

Software Creations

"The Home of Authors"

The #1 BBS - Boardwatch Magzine 1993

Software Creations BBS is dedicated to the development and distribution of great Software. As the Home BBS System for only the best Authors/Artists/Designers & Sound Developers in the world, we continue to release the worlds hottest software. Together Apogee and Software Creations will release more titles in 1994 than ever before! And we want you to be part of it all!

Watch what is here now and coming for 1994!

Local Access in over 1000 cities world-wide!
Internet access with NewsGroups and personal Email!
New RIP Graphical User Interface with full mouse support!
New files distribution program via modem or mail!
Tape / CD ROM distribution of new releases for Sysops!
Logically grouped file areas with all the best Shareware direct from the source!

Software Creations is Looking for you!

Come join a fast moving team. If you're a shareware author, RIP or ANSI Screen designer, Graphics artist, Sound developer, Shareware vendor, Beta tester, or Sysop that wants your BBS as an official Apogee and Software Creations release site, then give us a call! We're building teams all over the world, and we want you part of ours!

Receive 120 Meg of new uploads a week or month in the mail!

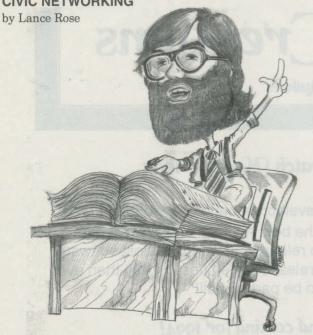

Currently Software Creations would like to find people to test, check, clean and write descriptions for files. We will provide a Colorado Tape drive, and tapes each month or week. Call us to discuss what you can earn!

BEYOND THE 500 CHANNELS: THE CENTER FOR CIVIC NETWORKING

s the Internet comes of age it has acquired several dancing partners. These include the ever-hopeful financiers of Wall Street we observed last month, as well as the Clinton administration, presumptively renaming the Internet the "National Information Infrastructure" as if it was an orphan found floating among the reeds. Another set of dance partners seeks to extend the gift of networking to those other than the rich and powerful — which numbers most people in this country, and in fact, the world. Several socially conscious groups have already achieved a high profile: The Electronic Frontier Foundation, seeking even-handed data transmission capabilities for all data users large and small., and to preserve our civil rights on the computer networks; The Computer Professionals for Social Responsibility, keeping government and corporate America honest in their network dealings, most recently through its relentless inquiries into the nest of secret deals and compromises behind the government's proposed Clipper encryption standard; and The Taxpayer Assets Project, seeking to free up public access to databases originally created using taxpayer funds, but which somehow became twisted into the private preserves of companies reselling the public's own data back to it for a profit.

Another group emerging powerfully on the scene is the Center for Civic Networking, based in both Washington and Boston. CCN is entirely devoted to the grassroots, the firmament out of which the Internet grew and in which it still largely resides. Large-scale networking veterans Richard Civille and Miles Fidelman founded CCN in August, 1992. At that time, strategic alliances were multiplying among giant companies to divvy up our national telecommunications resources, raising the grim prospect that a leviathan or two might walk away with the whole booty, drowning us in their wake with a broadband flood of endless incremental variations on MTV. CCN's goal was to educate the public and community leaders on the virtues of the existing Inter-

net before it all got steamrollered flat beneath the big money commercial interests. They set to work in the Boston area, seeking to assist various local community projects.

But then Clinton and Gore took office and started publicly proposing some vague equations between large-scale telecommunications and the future of the United States. The political winds shifting in an entirely new direction, CCN saw opportunities open up far beyond its original self-appointed task of performing salvage work on an about-to-crumble Internet. Shifting its base of operations to Washington, CCN stepped boldly forward to help steer our wobbly ship of state through the murky waters of cyberspace. Its grassroots goals remain the same, but now CCN is helping our civil servants on the Hill funnel the gathering massive investment in telecommunications, both public and private, into paths far more compelling than sheer consumerism. As CCN puts it:

A National Information Infrastructure (NII), designed for democracy, will help our country work smarter with an informed citizenry more fully engaged in life, liberty and the pursuit of happiness. Americans will enjoy more efficient, less costly government. The NII can help produce high quality jobs and educated citizens to fill them. We will pave a road away from poverty and promote life-long learning. Such a promise fulfilled will improve the public health and cultural life of our communities and revitalize our civic institutions. This is the civic promise of our information infrastructure — not simply a "video dial tone", 500 channels of movies, home shopping, or interactive video games.

This promise of deep and lasting benefits from computer networking is a pitch we don't hear often enough. In the not-so- old days, the beauty of the net for hackers and kindred souls was its promise of a wide-open frontier where one could both range free and retreat hermit-like from one's fellow humans. This dream was supplanted in the past year by the big business types, whose current rage is to package the networks as the next shot in the arm for the entertainment industries. These fads and others will leave their impressions on computer networking, but they are not deeply entwined with the soul of networking. The individualists will move on to new frontiers, the entertainment businesses will find other exciting technology fixes as broadband networks become just another standard delivery channel. But networks are ultimately about hooking people up for more effective communications. The changes in community activities and goals wrought by network communications will be lasting and deep. The very nature of community institutions will change, and conversely one of the biggest contributors to the ongoing shaping of the networks will be the needs of the communities they serve.

In keeping with its wholeheartedly adopted Washington focus, the first major product of CCN's efforts was a policy document aimed straight at legislators, titled "A National Strategy for Civic Networking: A Vision of Change", and finalized in October, 1993. This document defines for our political leaders how computer networks can serve local communities and national goals, both in broad terms and in detail. Despite its length, it seems to have won CCN a few

converts. CCN and its ideas were cited with approval in the Clinton administration's NII announcement (reprinted in its entirety in the November, 1993 issue of Boardwatch), and CCN is now one of the key groups helping the administration figure out how our government will fund and regulate the information superhighway.

he National Strategy document is a smorgasbord for legislators, broken down into three major sections. First, and perhaps least, is the "Vision of Civic Networking", a dream of how computer networks will cure every social ill plaguing mankind today, from revitalizing local economies to saving billions in health care to upgrading the education of our children. This is old hat to those who know already that the power of computer networks can revolutionize any social endeavor, if properly applied. However, many of our legislators are not modem initiates. CCN's flashy rundown of the wonderful social benefits of networking might help them understand from afar the scope of the communications revolution taking place. As a fringe benefit, it can give them and their supporters some inspiring mantras to pitch back and forth among themselves as they drum up votes for more dollars to help beef up the networks. Heck, it might even convince a couple of 'em to pay a native guide to take them on a little safari into the online jungle.

The second section of CCN's document sets forth four "Grand Challenges" for federal public interest communications policy: (1) leveraging the existing investment in today's Internet to create an effective, expanded National Information Infrastructure, (2) using public access to the NII as an "economic weapon" for reducing the federal debt, (3) using the NII to provide for "sustainable development" of local economies and communities, and (4) using the NII to provide for the poor and the "information have-nots." Again, these possibilities, if not always so grandly stated, are pretty obvious to those familiar with the Internet. In fact, it would be sheer lunacy to think of approaching any of these tasks through computer networking without using the Internet as the basis. CCN's achievement here has been to link the capabilities of the Internet (and its projected stepson NII) to national and grassroots goals. By carefully phrasing these goals in the overblown terms of traditional political rhetoric, CCN again seeks to divert legislators' attention to the vast social benefits of giving their constituents a bigger online playground. A bit too vast, perhaps. If the Internet (with or without a little enlightened federal guidance) does not knock out chronic poverty and the federal debt, will that mean it's a failure? Or can we be satisfied if Mr. Internet, after showing up in our living room TV sets, helps a small but measurable subset of our nation's couch potatoes achieve an incrementally greater state of alertness than they managed previously under a steady diet of Nick at Nite?

Perhaps the most impressive part of the National Strategy document is the third section, presenting CCN's four-fold approach to actually achieving the many broad policy goals it sets out for our country and the Internet. The first activity is to "gather new socioeconomic research data on how Americans use networked information at home and at work." There is very little such data so far. How could there be, with the Internet itself barely a concept more than a few years ago? One means of gathering data will be the U.S. census; CCN proposes to add computer network usage surveys to the types of data routinely collected by the census takers in the future. CCN has also begun working with the National Economic Council to investigate new surveys on network usage in the daily lives of Americans.

The second major activity is to develop a set of meaningful "benchmarks" for measuring network progress and the effects of various network initiatives, and to help determine future efforts. CCN claims benchmarks are important for enabling the American public to "shape the information highways through the democratic process." An "Information Infrastructure Benchmarking Project" has been planned, to be jointly conducted by CCN with another Washington group called the Center for Policy Alternatives. CCN points as a model to a long range plan called "Oregon Shines," adopted way back in 1988, which set up an Oregon Progress Board to establish measurable objectives for information network development.

Benchmarks look like a neat idea in theory, but their applicability to the Internet must itself be tested. The Internet has succeeded so far in growing like a wild weed without being effectively measured or guided. Can benchmarks be used meaningfully in this environment without being overrun? If so, can they help the Internet attain a greater value for a greater number of people than if the network just grows wild of its own accord? In any case, the value of anarchy as a fundamental principle of network operation should not be underestimated. It is the basis for the hardiness of the Internet, and it remains the very reason for being for Fidonet today.

CCN's third activity is to identify, develop and support local civic networking projects that might serve as good models for wider use - what CCN refers to as "scaleable prototypes." Many individual networks and bulletin board projects have already been identified by CCN, and their National Strategy document is worth reading just to have a look at the panoply of public networking projects going on around the country right now. As for general models, CCN has tentatively identified a few already: the "Free- net" - basically a franchise from a company that owns the "Free- net" trademark, which will sell various network services to its franchisees; the Municipal Network, run by a single city and coordinating that city's services; and the Regional Network, similar to a municipal network, but without a specific community base, in which the various social service agencies and human services agencies can share and coordinate information and resources. As these models and others are studied and better understood, it may be possible to refine them into plug and play templates for other communities that wish to get wired up but don't quite know how to do it.

Finally, CCN plans to develop "progressive" policy models to guide the future development of our social processes and civic institutions. For instance, they believe the public library will play a pivotal role in civic networking projects. The U.S. may have a large installed base of home computers, but for many, especially in the lower economic classes, CCN believes that libraries will be the most common on-ramps to the information highway for the foreseeable future.

SILVER XPRESS V5.0! The Most Powerful QWK Mail System in the World!

Since 1988, the Silver Xpress Off-line Mail, Fax and Data Entry System had led the industry with MORE POWER and MORE FEATURES than any other Off-line Mail System!

With Silver Xpress, you get enhanced QWK support along with our own, more powerful OPX mail format. No other system can match the features available across the board for so many Bulletin Board Systems!!

- Full FidoNet Capability
- Internet Addressing
- Built-In Fax System
- Mail Driven Event System
- · Vacation Mail System
- · Data Entry Forms Processing
- Complete Menu Customization
- · MultiLine, Desaview Support
- · Built-In File Transfer Protocols
- · Keyword Searching And Filters
- · GroupWare Mail System

Automatic Download/Upload

- Mail Bundling Commands
- Built-In Assistant System
- . Built-In Rip Support
- · Full BBS Security Support

CCN also sees the library serving an essential role as a secular, meditative community meeting place, which should be preserved even as its monopoly over stored information dwindles. Of course, to make this transition the library must mutate, and those that don't may well die off. Among other things, librarians will have to learn to encourage conversation, instead of keeping everyone quiet. Similar transitions will be necessary for such institutions as museums, schools and health clinics, but again, they are all also seen by CCN as necessary for the future of our communities. New public institutions may pop up as well in the networked environments, but it is hard to say what shape they'll take. Perhaps in some places libraries will be replaced by more general "media centers", or perhaps radio station chains will one day swallow a free-net

relieve it or not, all this barely scratches the surface. Other current and future projects of CCN include an economic development project in Bevins, Massachusetts; holding conferences and forums in Boston and Washington, and participating in many other conferences relating to network policy; the Sustainable Development Information Network, supported by Apple Computer, with the goal of creating an information service for use by New England communities and companies; involvement in the Interagency Telecommunications Advisory Council, a group of Southern California municipal agencies seeking to create a general-purpose regional civic network; and other new projects by the day.

The artist Picasso once said you need to have an idea of what you are going to do, but it must be a vague idea. This seems to describe CCN pretty well. They have an impossibly ambitious agenda, vague due both to the newness of the ground covered and the breadth of the territory they have marked off as their field of action. Nonetheless, they seem to be doing a good job so far of biting off chunks that can lead to worthwhile results. A little down the road, the challenge will be to see if they can sharpen up their various agendas into a clearly focused vision of interoperating civic networks on the local, regional and national levels.

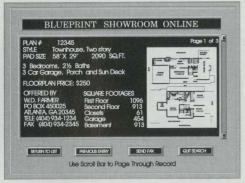

We must note that CCN is firmly committed to working with city, state and federal governments. In fact, CCN insists that government must play a role in network development if the networks are ultimately to serve more than the ruling classes in our society. This kind of talk makes those who distrust government bristle, and they may be right. CCN may simply be hopelessly, if deliberately, naive in placing its trust in government doing the right thing or the smart thing. By the same token, CCN may be the one who's right. Perhaps those with the bad luck to lack a personal fortune will find themselves left out of much of the coming networked world unless our government steps in to assert the needs of the many against the whims of the few.

CCN figures it can only depend on a small window - until 1996, the end of the current Clinton administration - to do its work. By that time, it says government policy agendas on networking will be "locked in," and further change will devolve into the time-honored wrestling match with red tape. So for those who are interested, the time to set public networking agendas is now. The Center for Civic Networking is

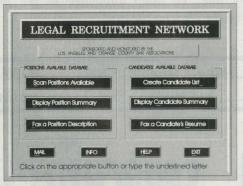

located at P.O. Box 65272, Washington, DC 20035, (202)362-3831, rciville@civicnet.org

Lance Rose is an attorney practicing high-tech and information law in Montclair, NJ. He can be found on the Internet at elrose@path.net, and on Compuserve at 72230,2044. He is also author of SysLaw, the legal guide for online service providers, available from PC Information Group at 800-321-8285.

Your Application Online... In Days! Save Time, Money, and Resources

Announcing Integrated Line Art Accessible... Without Downloading

Business Graphics Customized for your Application

Menus, Databases, and other Online Service Features Tailored to Meet Your Specific Business Needs. The Business BBS is a premiere online systems service bureau. We design, build, operate and maintain custom online services on our equipment, at our facility. Your application can be built, tested, and online in days. Ease of use is assured, even for inexperienced users.

We tailor menus, databases, and other online service features to meet your specific business needs. Our applications tool kit includes the industry's most expansive feature set and a variety of database engines. A crisp, clean, mouse driven, button activated optional business Graphical User Interface is available.

Combine our online expertise with your business and customer knowledge to build efficient, easy to use integrated applications. You control information content, features, and user access, with complete security.

The Business BBS

Voice Modem Fax (310) 477-0593 • (310) 477-0408 • (310) 477-9475 2531 Sawtelle Blvd., #109, Los Angeles, CA 90064-3163

Searchlight BBS New Version 3.5!

...you won't believe your GUIs

The Graphical User Interface is here to stay. Your callers love the dazzling displays and powerful features that Windows and OS/2 provide. They don't want to give that up just to call your board.

If you just want graphics, you can choose any BBS program that supports TeleGrafix's Remote Imaging Protocol. But if you want the power that only a true GUI provides, then you need Searchlight 3.5.

RIP support, not RIP service

Beauty—like our competition's RIP support—is only skin deep. They still display text in 20-line chunks. They make you press Enter to confirm choices. And make you tag items by typing line numbers.

And they can't create RIP screens. So you have to buy a paint program and spend hours drawing screens that match your menus.

Searchlight believes in doing things first, and getting them right. In 1987, we released the first BBS with a full-screen editor. In 1988, we added Lotus-style menus. In 1993, we were first with RIP support.

Our RIP support isn't tacked on—it's built in. We generate RIP screens on the fly. We give callers pick lists, scroll bars and dialog boxes.

Is there really a difference? Listen to Boardwatch editor Jack Rickard: "Searchlight has incorporated RIP technology to an amazingly integrated level with their BBS package... It looks hot."

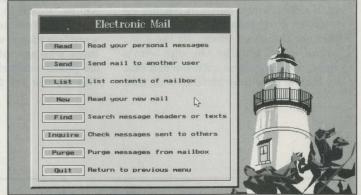

No fine print

Callers like the things Searchlight 3.5 does. Sysops like the things Searchlight won't do.

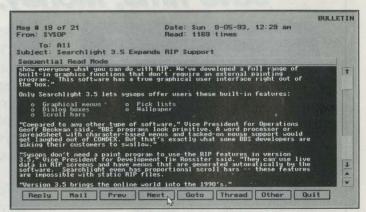

We won't charge extra for DigiBoard compatibility or tech support. Our remote DOS shell is built in. Our 30-day, money-back guarantee is unconditional, with no "restocking fee". If you want to add lines, we credit all your purchase price toward your upgrade.

And we don't want to sell you a terminal program. We include TeleGrafix's RIPterm with every copy of Searchlight, so you can give every new caller a free, RIP-compatible terminal.

So call us for your demo of Searchlight 3.5 today. And see why our sysops and their callers say that Searchlight just isn't like the other GUIs.

The lighthouse was an existing RIP screen. The RIP menu on it was automatically generated by Searchlight.

The scroll bar on our RIP message reader lets you read mail line by line. To jump anywhere in the message quickly and easily, click on the bar.

MONTHLY LIST - NEW JERSEY By Brian Gallagher

Among the flashing lights, big jackpots, and high stakes of Atlantic City, one community of individuals is winning over and over again - BBS users. With a list comprised of 707 BBSs New Jerseyites are really cashing in on a plethora of BBSs that are flourishing in their state. And thanks to Wayne Morton, citizens of the most densely populated state in the union can pick and choose which boards they would like to call.

Morton updates the mammoth list as often as he can and willingly solicits help from anyone and everyone to accomplish the task. And he has done one heck of a job for being a relative novice to the computer industry. He bought a computer in 1985 after a motorcycle accident left him wheel chair bound. But that hasn't slowed him down one bit.

After teaching himself Word Perfect, he found a job teaching the program for a company. Seven months later he was told by a social worker that he didn't score high enough on an aptitude test to learn word processing. Go figure.

But word processing was not going to be the last stop on Morton's silicon journey. After watching the movie, "War Games," he bought himself a modem, and was running his own BBS by 1987. A quick year after that he was and is the master of one of the largest BBS lists in North America. The list also turns out to be a very popular one, with over 2,000 hungry users downloading it every month, from several area boards he distributes it to.

What makes this list so popular isn't just the huge volume of people concentrated into such a small area, it has a lot to do with the quality of the boards too. Which brings us to Compu-Data, (609)232-1245. "I think it's the best board in the state... without a doubt," he said. Adding that sysop Phil Gordemer does a great job with the board. The major draw of the board for Morton is an immense library of files, or "every file that has been around since the beginning of time."

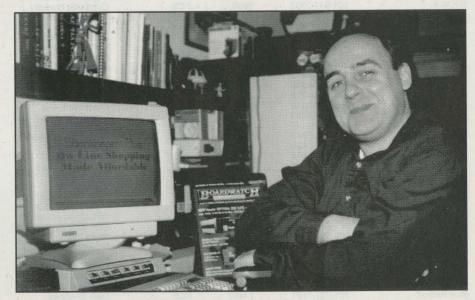

Another board that gets high marks from Morton is Allen's Space Shuttle, (609)953-5612. The Space Shuttle is loaded with CD-Rom drives with all sorts of information that Morton thinks is particularly helpful to syops.

On his own board, the Praedo BBS, (609)953-0769, Morton is particularly proud of the shopping area. It is a new addition to his board he has also distributed to other area boards - created out of a brainstorming effort between Morton and programmer Michael Smith. The program allows sysops to sell merchandise and patron memberships on their boards. It's different from other shopping programs because they supply sysops with data bases of merchandise they can sell without having to worry about inventory or overhead.

Morton said the shopping section is "really cool because we keep adding new vendors, and it's neat to see what they have to offer." He has a theory that executives no longer have time to deal with their spouses because they are always on bulletin boards. Therefore, while they're on the boards they will buy their spouses a little something from the shopping program as a peace offering for long late night hours. (A little hint to the too often online executive - Morton hopes to have flowers online by Valentine's Day.)

Hopefully his BBS shopper will save a few marriages and avoid at least as many spats. While we're on the subject of avoidance, there are some boards or some sysop practices which Morton thinks are best to do just that - avoid. Topping off his don't dial list are sysops who are into the practice of distributing pirated files. Other don't bother BBSs are boards that constantly change their name. "I hate that." he said. It's no wonder, considering he must track the name changes, and a board that can't decide on a permanent name just confuses users and sysops alike.

After avoiding these nuisances, Morton is ready to dial until the lines melt, and he is fascinated by the possibilities of future BBSing, especially the onset of more and more BBSs adding Internet connections. Indeed the Internet seems destined to change, at least to some degree, the face and function of BBSs forever. While the rest of New Jersey wanders about their daily routine, one of the largest online communities hums silently along with New York City as a busy and bustling backdrop. And somewhere tucked away behind a keyboard, is Wayne Morton, making sure those who travel via the phone lines get to where they are going, and know where it is that they want to go.

Cheap Talk.

You love online services but hate the cost. Come to NVN where you can talk cheap.

FORUMS, GAMES, SPORTS, NEWS, BUSINESS INFORMATION. For just \$8.95 a month, you get 4 hours of access during non-prime time in our standard services. Thereafter, we've got access rates as low as \$2.50/hour. And unlike other online services, there's no extra charge for 9600 bps. Finally, a place where talk is cheap!

Communicate with others across the nation in over 75 forums. You can discuss software, UFOs, politics, investments, taxes, pets, astrology, sports, or just about any topic. Check out our hot multi-player games. Match your wits against some of the nastiest, meanest, most cunning opponents in the game world-other humans. Use NVN to access Internet and send mail to your friends. Access financial information, from the latest stock quotes to your own personal portfolio of stocks, bonds and funds. Get in-depth research from the prominent Dun & Bradstreet or TRW databases. Catch and clip late-breaking stories from some of the nation's largest wire services. It's all here for you and it won't cost you a second mortgage on your home.

Need a private place for your group to communicate? With NVN, you can set-up a private forum for your group's exclusive access, with entry restricted to members you designate. For a small one-time set up fee, you can have your own private national bbs. For information on setting up your own board, contact NVN at 1-800-336-9096.

Call NVN and start talking cheap.

A subscription is just \$8.95 a month and includes 4 hours of non-prime access in standard services. To subscribe, follow the instructions in the box.

How to register for a subscription to NVN:

To register on-line, set your comm software to 1200, 2400 or 9600 bps, N-8-1, and full duplex. Dial 1-800-336-9092. When connected, enter BW93CT and press <RETURN>. Then enter name, address and Visa, Discover Card, American Express, MasterCard number or EFT information. Your Starter Kit will internet ma be mailed right away.

For more information, call 1-800-336-9096.

NVN-Good stuff. Good price.

Subscription fee is \$8.95 per month, which includes 4 hours of non-prime time access in standard services. 9600 bps access available at no surcharge. Standard services are \$2.50/hour during non-prime (6pm - 7am weekdays, and all day weekends); and \$7.50/hour during prime-time (7am - 6pm, Monday - Friday). Premium services carry additional charges. Unused portions of monthly 4 hours provided by subscription may not be carried forward or transferred. Hourly rates and service mark of National Videotex Network. Corp. All others are for identification purposes only and belong to their respective companies or organizations.

BAIOU **Most Money!** the

The Major BBS by Galacticom

with Credit Card Add-on Modules by DataSafe Publications, Authorized Galacticomm Reseller and Third Party Developer, will let you create the successful and profitable BBS you have always envisioned!

DISCOUER

Accept these Major Credit Cards Online! Approved or Declined Automatically, 24Hrs/Day

VisaMan

The premier subscription module for The Major BBS. Works on hourly & subscription based systems. Performs automatic account class switching, credit card checking using MOD 10 and credit/day posting. Designed to work with the POS Dial module for automatic online credit card verification.

AutoRate™

Sounds GREATI
But how do I accept
credit cards on my

own BBS 7

AutoRate is a credit surcharge utility that allows you to vary credit usage rates based on channel group, day of week, and time of day. Ideal for systems using X.25 leased lines, surcharging high speed modem lines or discounting during off peak hours.

Omni-Mall™

The first end-to-end shopping mall for The Major BBS. Performs file distribution of data products such as software, data base information and valuable text files. Email receipts and orders Faxed to store managers. Works with the POS Dial module for automatic online credit card verification.

MovaTrek TM

SZ49

NovaTrek is a full screen ANSI space game in which you become the captain of a spaceship and recruit a crew to scour the galaxy for uncharted planets, aliens and adventure. Sysop configurable options include number of planets, players and aliens plus, ship and alien specifications.

Point-of-Sale Dial \$250

The POS Dial module is designed to interface with VisaMan and Omni-Mall to perform automatic online credit card approval or declination, 24 hrs a day. Never worry about manual processing of your credit cards sales

Global Power™

Global Power sets the NEW standard in global command modules. Sysop commands include class switching, key assignment, credit posting and more. User options include password changes, teleconference entrance/exit message changes and Global Graphics(TM) to other users

- Galacticomm Products Discounted -

DataSafe Publications, Inc. is a multifaceted company that develops add-on products for The Major BBS, resells Galacticomm software and runs it's own successful BBS. Whether you are setting up a Local Entertainment BBS, Corporate Support System or a National Online Service, we can help. Give us a call when you are ready to setup your system or when you need to expand your existing system.

The Major BBS 6.12 (2 User)...... \$199 User 6-Pack.....\$200 RIPscrip Add-on Option..... \$212

All Galacticomm Products Discounted

Teleflora CreditLine

In order to accept credit cards on your BBS

you will need to secure a merchant account. Many banks and merchant account vendors

don't understand BBSs and how they operate. They either refuse merchant accounts to BBS operators or charge high rates for their services. Teleflora on the other hand knows BBSs and wants your business. As a representative for Teleflora, DataSafe can help you

secure a merchant account. Give us a call today for a

Professional Developer's Group

DataSafe is a member of the Professional Developer's Group (PDG). PDG consists of a group of software developer's dedicated to providing the finest products possible for The Major BBS. When you buy from a PDG member you can count on:

- 30 Day Money Back Guarantee
 Prompt Shipping of all Orders
 Response to Bug Reports
- Prompt Shipping of all Orders
 Well Documented Software
- "One-Stop" Shopping

As a member we resell the following PDG member products.

Communications and Information Systems Specialists

Are You Losing Time
Setting Up Your Business
On-Line Information System?

INSTALLING COMMERCIAL BBS SYSTEMS IS OUR ONLY BUSINESS

The Only Choice in Telecommunications

GW Associates was formed several years ago to promote and support the growing need for Information Management systems (BBS). Our goal has always been to make communications easier. We've always had the opinion that many seem to work very hard to make "telecommunications" some kind of mystery, a gray area where common man should never wander. And it really can be made simple. We'll be happy to show you how!

Muti-User Environments

Our ONLY business is telecommunications. We install commercial information management systems, we install telecommunications networks linking offices across the country using personal computers and inexpensive automated software. And we sell everything from single line TBBS software to 64 line "plug and play" packages.

Cost Effective

We remotely maintain commercial BBS systems. It's a good bet that you have never hired an employee to be a System Operator. And any time that an employee spends in the design and maintenance of a system is taking time away from the work that employee was hired to do! What happens when the employee is promoted, transfers or resigns? Can you afford to hire and train, or take another employee away from assigned tasks? We can support your TBBS system remotely at what might be a lower cost than what you will pay for an employee benefits package, and we won't demand paid vacations or coffee breaks.

Need Local Support?

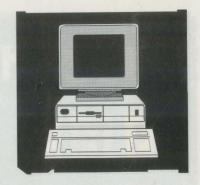

We have been building a matrix of associates around the world with the capability of installing and maintaining private and commercial TBBS/TDBS Bulletin Board Systems and that matrix is in place to help you in any way we can. If you would like someone to visit your site to do a full needs assessment or to help you with an existing TBBS/TDBS installation we will be happy to place you in contact with one of our associates nearby. And as all our associates work together as a team you can take advantage of their many years of accumulated experience with TBBS systems.

Call Today For More Information

If there's anything we can do to help you make better use of any communications tool, please ask. If you're not sure if you really have a need for a system and want to know more, please ask. We're here to help in any way we can. We hope you'll give us the opportunity to help. If you need information on prices or just need information on communications, don't hesitate to ask for help. We enjoy what we do and we'll enjoy discussing your applications and needs.

System Support / Custom Programming

There's a lot available for the TBBS/TDBS System Operator, as well as for anyone interested in an Information System (BBS). If you want to learn more about TBBS/TDBS just call our system and register as a customer. GW Associates offers full support to all System Operators and we now have 30 of the top TDBS programmers available to help with your applications and customizing of your system at a very reasonable cost. Please call our system at (508) 429-8385 (N,8,1) and keep up with our new releases or call us on our voice line at (508) 429-6227 if we can help you in any way. Installing and remotely supporting commercial systems is our ONLY business!

Call our Sales and Support BBS for full demonstrations of over 100 TBBS / TDBS add-on application, entertainment and utility programs.

TBBS / TDBS SYSTEM ENHANCEMENT SOFTWARE

Master File Manager (MFM)

MFM was designed to make it easier for your users to download files from both fixed disks and compact discs with little to no impact to your system. And with the new network interface MFM adds even more capability and flexibility to this well known and full featured program. Adding a multi-disc drive to your system is the most cost effective method of increasing your download library. Hundreds of TBBS SysOps now use MFM and have found it the most effective software available for handling compact discs in almost any configuration.

QuickSearch

The ultimate in text file search programs, QuickSearch is already proven itself to be the ideal tool for any customer or sales support system. QuickSearch easily creates an index of over 11,000 text files in up to 99 directories and allows a user to perform multiple boolean criteria searches to find matches and present them for display or download. It sounds simple, and it is! And it is unbelievably fast. This program is a must if you have a need for fast information retrieval. Easy to install and even easier to maintain, it can quickly put an end to repetitive questions and provide information to your users and customers quickly.

SystemMaster

SystemMaster allows COMPLETE and easy control of any TBBS/TDBS system. It features the ability to store and launch any TBBS command from a database of individual commands or from Prgram Groups which allow sequential execution of specific commands that YOU group together. You can even sort the commands or time their execution speed. It has Context sensitive help which automatically pops-up in a window whenever you add or edit a TBBS command, it provides a complete suite of easy to use SYSOM and DOS commands and facilities far beyond what you've ever seen before in a TBBS/TDBS, it provides a COMPLETE TDBS control area which allows you to create, modify, pack, zap, search and edit any TDBS database and index file, and much much more!

Educational Games / Entertainment Software

We're not sure if they are truly educational or just great fun but we have several new games by Ken Cox and John Rice that certainly make users think! Ken's latest is Classic Hits, with over 2200 song title and rock music questions. And John's Colossal Cliches has a database of over 500 cliches, old and new, with an editor so you can add your own! We have games that make your users think! And there are dozens of other games and entertainment software available, priced from \$29.95 to \$169.95.

Application and Utility Software

We are the recognized source for excellent TBBS/TDBS application and utility software with over 60 programs in our catalog and more being added every week!

INTELLIGENCE RECOGNIZED!

"ZyXEL modems are now among the best performers" - PC Magazine

Leading industry publications are giving the ZyXEL family of modems rave reviews for top performance. ZyXEL's Ultra High Speed Modems are packaged to fit a variety of modem configurations, giving you more intelligent features for less.

"ZyXEL modems are loaded with features, it comprises a virtual treasure box of surprises." - Boardwatch Magazine

ZyXEL's U-Series modems offer an array of intelligent features that ensure fast, reliable operation - and true "plug-and-

play" operating ease. Offering two-way fax capabilities and it's NEW VOICEFAX SOFTWARE,* ZyXEL lets users forward and retrieve voice mail box messages from remote locations. With ZyXEL's Rackmount and NMS, you can control and monitor hundreds of sites at a time. And for users onthe-go, it's the new U-1496P portable modem/fax with voice which offers cellular capability and portability, plus all of ZyXEL's standard features.

"Some modems are good. Some modems are fast. ZyXEL modems are good and fast." - Computer Shopper

ZyXEL PLUS Series gives you top speeds of up to 19.2 Kbps, with DTE speeds of up to 76.8 Kbps. And don't forget that

ZyXEL modems come with a 5-year warranty** and will be upgradable to V.Fast Advantage, upon finalization of the standard, starting at \$249.**

"ZyXEL modems scored a three way tie for best two way communications modem." - BYTE

PC Magazine honors ZyXEL modems as one of the top three out of sixty-two modems that have perfect connection

record. Compatible with most other modems, ZyXEL modems operate in asynchronous and synchronous mode - and in all environments, including DOS,™ Windows,® OS/2,® Macintosh,® UNIX,® NeXT® and Amiga.™ And, with V.25bis for synchronous communications, ZyXEL is compatible with IBM's AS/400 and RS/6000.

ZvXEL's Intelligent Features

- Ultra High Speed 19.2/16.8 Kbps
- · V.32bis/V.32, V.22bis/V.22, BELL 212A
- · V.17-14.4 Kbps, EIA Class 2, G3 Fax, S&R
- V.42/V.42bis with Selective Reject-MNP® 3/4/5
- Digitized Voice Capability
- Caller ID/Distinctive Ring
- Remote Configuration
- · Auto Fall Forward/Fall Back
- · Call-Back Security with Password Protection
- · Line Probing Techniques
- 2/4 Wire Leased/Dial Line
- Auto Data/FAX/Voice Detection****
- · Upgradable by EPROM

Join industry experts in finding out how ZyXEL's Intelligent modem can be a wise investment.

World's Largest BBS

Top 10 reasons to call Exec-PC

Reason 10. NO Buttafuocos allowed!

Reason 9. Best damn BBS in the world - trust us.

Reason 8. Riker to Enterprise:
Beam down Troi and a 6-pack.

Reason 7. Received our 7,000,000th caller on October 7th - 5000 callers per day.

Reason 6. Elvis voted for us in the Boardwatch contest.

Reason 5. Largest downloadable CD-ROM collection in the world!

Reason 4. 280 phone lines - no busy signals.

Reason 3. Worldwide access via CompuServe Network.

Reason 2. We wanted to be #2 in the Boardwatch contest.

Reason 1. It's the best connection your modem will ever make!

Exec-PC BBS
PO Box 57

Elm Grove, WI 53122 Voice: (800) ExecPC1 (414) 789-4200

Celebrating our 10th year of serving the BBS community.

6000+ Shareware Programs for Less Than a Penny Each!

Shareware should always be supported by paying for what you use. But let's face it, what an affordable way to browse.

All programs are 1992/93

As for browsing, we believe we've got the best front end, search and retrieval engine available on a disc.

PC/4

6000+ Shareware Programs for Less Than a Penny Each!

WCG 3b, the Optical BBS, formerly Wildcat! Gold, has over 200 categories of 1992, 1993 shareware (640mb). Ideal for use by Wildcat BBS operators, with over 400 Wildcat utilities.

So call us to order now. 1-800-279-6099

\$310.00

dB Onli

Finally powerful access to your database files... Online!

dB Online is the first database door to execute any existing dBASE III+ source code (.PRG) in an online environment. Check out its features:

- ☑ Runs native dBASE III+ code without dBASE III+
- Full network and multiuser compatible
- ✓ Clean recovery from loss of carrier and timeouts
- Accesses dBASE III+/IV, Clipper and FoxPro database, index and memo files
- Runs with PCBoard, RemoteAccess, Wildcat!, Searchlight, Maximus, Roboboard, and many more...
- M Stand Alone version does not require BBS software
- Works with COM1-8, FOSSIL, and Digiboard, Arnet, Stargate smart I/O cards
- M RIP and ANSI compatible

WILDCAT! IM — The intelligent alternative.

Is it really this easy?

THE ANSWER IS YES!

You can have it all with WILDCAT! IM

Why give up speed, power and flexibility just to run a multi-user BBS? Why pay high add-on prices for the kind of features you have a right to expect in a professional BBS program? Why pay thousands extra for software only a programmer can understand?

WILDCAT! IM easily handles up to eight high speed modem lines on a 486 PC using an intelligent Digiboard card, with no noticeable slowdown in performance. Add one or more eight-line workstations to your LAN, and you have a fully network-compatible multi-user BBS with local logins, without having to spend, spend, and spend again.

Yes, We Do Doors

With WILDCAT! IM, you're not tied to proprietary modules that cost a lot but might not fit your needs. You're not locked in to buying source code or special compilers and libraries if you want to use serious business applications instead of space monster games. And you're not stuck with kludges that require you to have additional PCs networked to your BBS, just to run doors and DOS applications.

That's because WILDCAT! IM lets you run off-the-shelf applications as ordinary menu selections. We even give you a customized version of DOORWAY — to add Digiboard compatible COM I/O routines to your favorite DOS applications.

Yes, We Do E-Mail

Whether you need local or wide-area messaging, whether you want shared public conference mail or point-to-point E-Mail, WILDCAT! IM can help you do it. Whether you need a simple QWK-compatible network, or our optional MHS and UUCP gateways, WILDCAT! IM helps you move the mail.

Yes, We Do LAN Sessions

You don't have to pay hundreds extra just for add-ons to let your LAN users log into the BBS. WILDCAT! IM was designed for LAN compatibility from the start. It's this simple: install WILDCAT! IM on any network drive. Then run WILDCAT! BBS from the DOS prompt at any workstation on the network. Full functionality, including file uploads and downloads across the LAN. Up to 250 simultaneous sessions in any combination of local LAN logins and modem connections. Why do it any other way?

Yes, We Do RIP

RIP (Remote Imaging Protocol) graphics come standard with WILDCAT! IM. Users can select menu commands with the mouse, and see graphics comparable to or better than those found on Prodigy or America Online. And we don't make your users give up their favorite professional communications software, either. RIP graphics are fully supported by QmodemPro.

Yes, We Do CD-ROM

Of all the new computer hardware developments of the last decade, none have had more impact on the BBS world than CD-ROM technology. CD-ROMs are a perfect way to add huge numbers of files to your BBS. Instead of making you use third-party doors or expensive add-on modules to support a CD-ROM, WILDCAT! IM treats it just like another hard drive, showing the CD-ROM files as part of your regular file download areas.

What are you waiting for?

August 17 - 21, 1994

Atlanta Market Center INFORUM

Atlanta Marriot Marquis Hotel Atlanta, Georgia

Don't miss the Online Networking Exposition and BBS Convention - the trade show for the online services industry. One BBSCON has emerged as the largest gathering of electronic bulletin board and online service operators ever assembled. Nearly 400 vendors display the very latest in personal computer communications technology including modem technology, satellite communications, communications software, and utilities of all kinds, the Internet connection for bulletin boards, and much much more. ONE BBSCON is an intense three-day educational event featuring over 100 educational sessions and seminars covering every aspect of PC communications not only at the technical "how to" level, but also covering the legal and social issues raised by an increasingly "connected" world.

Nowhere else will you ever have the opportunity to see as many BBS products in action, talk to the vendors, compare BBS software and solution side-by side, and see close up virtually every aspect of communicating online with personal computers. Nowhere else will find such a presentation of technical and operational information from the people who know - that you can use to operate your own online service to enhance your existing business, or form the basis of an entirely new one in the information age. And nowhere will you find as many BBS operators from around the world, from single line hobby systems to the largest commercial networks, gathered under one roof to share experiences, trade war stories, and rub elbows with the movers and shakers of the online industry. This is the most intense, exciting, educational trade show you've ever attended.

Exhibit floor

Nearly 400 vendors present their latest product introductions for your inspection. Hundreds of special show discount "deals" on modems, software and more make this the best shopping event in the industry. Many attendees pay for the entire cost of their trip with savings from these fabulous bargains.

Days of Intensive Educational Sessions

TBBS Sysops!

Announcing Jack Rickard's

Personal Internet Mail Processor (PIMP) Version 2.00

Option Module for TBBS

Let PIMP connect your TBBS system to the world!

TBBS SYSOPS!

The hottest area in the Bulletin Board world today is making the connection to the global Internet e-mail network. Allow your callers to send and receive electronic mail to CompuServe, GEnie, America Online, and thousands of other hosts in over 40 countries around the globe.

True 100% assembly language TBBS option module loads with your bbs to process inbound and outbound UUCP mail files continuously without ever taking your BBS offline to process mail.

NEW in 2.00 Internal UUCPg Protocol Dialer

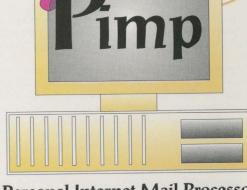

Uses any available BBS line to automatically dial your host and exchange mail. NO NANNY MACHINE OR LAN REQUIRED! Our own internal implementation of the UUCPg protocol.

NEW in 2.00 Open PIMP

Spawns ANY TDBS application on receipt of mail or on creation of mail.

NEW in 2.00 Usenet News Groups

Provide your callers access to the largest shared message conference on the planet - 4700 message conferences and 50 MB daily to choose from. No limit to the number of conferences you can carry. VERY SIMPLE CONFIGURATION!

Personal Internet Mail Processor

NEW in 2.00 FTP File Server

Allows anyone to send e-mail requesting a file from your system, and receive it by return mail as UUENCODED file attachment.

Mailing List Server

Moderate your own mailing lists reaching thousands of correspondents worldwide on any topic you choose. Auto add/delete in response to - REQUEST messages.

Inbound/Outbound File Attachments

PIMP automatically handles UUENCODE/UUDECODE of file attachments across the Internet - IT WORKS JUST LIKE TBBS!

Inbound aliasing, bounce message advisories, mailing list redirection to a public message board, and more!

Your callers deal with Internet mail using all the features of the existing TBBS message system - replies, searches, message scan, forward, file attachments, message waiting que, .QWK offline mail readers (requires eSoft's QSO option module). PIMP extends your TBBS message base to encompass the world, making global mail easy for your callers. Messages can go out within one minute after caller entry.

PIMP for TBBS - Option Module Version - \$249.00 visa/mc accepted

Upgrading Your Modem...

Can Be A Painful Experience,

Not To Mention Expensive!

SoftModem users don't experience the pain and expense of upgrading their modems. That's the value of SoftModem Technology.

Tired of ripping your PC apart every time there is a change in modem standards or performance improvement? Well maybe its time you tried a Connection Series SoftModem from Digicom Systems? Our exclusive SoftModem Technology lets you avoid the frustration and expense of adding new hardware by simply inserting a new diskette or dialing into our BBS (bulletin board service) to update to the latest technology.

Increasing the modem's speed from 9600 to 14,000 to 19,200 bps, or adding fax and voice capabilities to a reprogrammable DSP (digital signal processing) based modem is both easy and inexpensive! For information about the benefits of SoftModem Technology and our Connection Series modems. Call 1-800-833-8900.

Online Photograph Database and Catalog Order Entry

Durand Communications Network proudly announces the DC Net Online Photograph Database. This powerful multi-line database is 100% configurable to meet your application needs. Now you can create your own business database application or use one of our 'turn-key' applications to provide complete database services. With DC Net, you can have up to 16 databases online at one time.

The latest addition to the DC NET Online Photograph Database family of products is Order Entry v1.0. Callers can search a graphical database, view photographs and order products online. Order Entry can link to any custom designed DC NET database application.

Features

DC Net v2.0

- Multiple images and text on the same screen
- ✓ Move, resize or tile multiple images online or offline
- ✓ Terminal program is 100% RIPscrip compatible
- ✓ Attach up to 10 photographs or text files to any record
- View up to 7 pages of detail for every record
- ✓ Print photographs online or offline
- ✓ Bill only successful database searches
- Offline viewing of images with DC Slideshow
- Support for BMP, PCX, GIF, TIF, TGA and CMP
- ✓ Most images compress to 8k-15k
- Shareware terminal program distributed royalty free

Order Entry v 1.0

- 100% configurable to meet your Order Entry needs
- ✓ Configurable shipping and payment methods
- Define distributor discounts
- Complete user-account level security
- Review orders and totals before ordering
- Automatically calculates taxes and shipping
- Automatically generates E-Mail P.O.
- Complete mouse support

So what's different about our CD-ROM Discs. . . Besides Interface Software That'll Blow Your Socks Off?

The archive files have all been read and indexed by our hypertext search engine which creates a file on the CD-ROM Disc that allows for searches on unique words and phrases. This means that the user can search the entire disc in less than 10 seconds and the search will include ALL of the documentation INSIDE the archive files. For DOS and Windows 3.1 users we provide both MegaSearch and MegaWin our Graphical Search and Retrieval Software that allows the user to view 256 Color Gif's, Animated Color Fli's, play SOUND BLASTER sound Files, plus view and search for text strings INSIDE the archive files, all with just one keystroke or mouse click.

Our CD-ROM Discs are "BBS Ready" & include files.bbs, plus MegaDoor & MegaTerminal. Both programs fully support the hypersearch lookup features of MegaSearch. MegaTerminal is our "Remote BBS Graphical User Interface" MegaDoor that allows the remote user to access MegaDoor using... Mouseable Pull-Down Menus in a Windowed Environment! Try It, It's unlike anything seen before on public BBS systems. Call our BBS at (602) 770-0008. Select Doors from the main menu, run door #1, enter ! to download MegaTerminal, Unzip, read the short document megaterm.doc, install as instructed and experience Mega Terminal!

Mega Demo & Test contains 350 Megs of PC Shareware & PD software. Including Special **CD-ROM Benchmark and Test** Utilities written by our programming staff, & NOT available on any other CD-ROM Discs. Our Special Test Utilities measure throughput as well as access time in a reliable and consistent manner for a meaningful real-world benchmark for CD drives. The Disc and Interface Software are fully functional (Even for BBS Use) and not crippled in any way. When purchased separately Mega Demo and Test is \$14.00 plus \$6.00 for **S&H** However for a Limited Time This Demo and Test CD-ROM Disc is Free with any CD Disc purchase.

These are the Only Shareware & PD CD-ROM Discs with both a DOS, and a Windows 3.1 "Hypertext" Retrieval Interface. Plus All CD Discs are BBS Ready, and Include files.bbs plus our BBS Door with our "Remote User" Mouseable Pull-Down Menu Interface.

The Innovation Continues...

SION 6.1 of The Major BBS

ard at work in sun-swept Florida, our fearless developers have discovered the future of BBSing... EGA/VGA graphics and ANSI together on the same BBS! The Major BBS Version 6.1 gives you the power to create a graphical DOS-based BBS that also supports non-graphics users — everyone can use your system.

Our new multi-lingual/multi-protocol architecture lets you easily plug in languages, such as Spanish and French, and alternate presentation protocols like RIPscrip and NAPLPS. You can offer as many as 50 different languages for up to 256 simultaneous users on a single machine. Add new languages with just a couple of keystrokes.

Use our RIPscrip add-on option to give your users dazzling online graphics. The Sysop "paint" tool works directly with The Major BBS configuration utility and lets you draw beautiful scenes and mouse-driven menus. A royalty-free, graphics terminal program is included for distribution to your customers.

Version 6.1 also includes "doors" to a second machine, better MS-Windows support, MHS file attachments, an "upload message" feature in E-mail and Forums, improved security, and much more.

That's just the beginning. Our new Fax/Online add-on lets you integrate fax-mail and fax-server technology into your BBS. And our new Major Gateway/Internet add-on directly ties you into the world's largest message network.

As the competition fades into the sunset, we continue our quest to give you the best BBS in the world. See your local software dealer or call us at 1-800-328-1128.

RIPscrip gives your BBS the dazzling look-and-feel of a graphical system.

Add new languages and presentation protocols — or create your own!

Turn your BBS into a fax/data server with the Fax/Online add-on option.
